Torino, Corso Duca degli Abruzzi 24, 10129 Torino, Italy

Received: 22 April 1991

Abstract A comparative method is presented, suitable to
measure both thermal diffusivity and conductivity of low-
conducting solids. The repeatability of the measurements of
thermal conductivity is 3%, whereas for diffusivity is 6%. Data
for some low-conducting materials are given, consistent with
those reported in the literature.

Key words low-conducting materials - thermal conductivity -
thermal diffusivity
