The Conference **The PUBLIC SPACE in the Anthropocene era: THE ROLE OF GREEN to re-urbanize the contemporary city**, concludes the course of the Educational Workshop "Regenerating public space: standard, soil , ecosystem services" and will see the participation of authoritative exponents of the world of Research, of the University and of the Public Administration, engaged in the discussion and confrontation on issues of public space as a reference matrix supporting regeneration and green policies as a field of action multifunctional for improving urban quality and human well-being.

Authoritative exponents of the world of Research, University and Public Administration participated, engaged in discussion and dialogue on issues of public space as a reference matrix in support of regeneration policies, and of greenery as a multifunctional field of action for the improvement of urban quality and human well-being.

The Conference stands at the end of a complex educational experience aimed above all at making students aware of the imperative need to practice multidisciplinary, intersectoral and trans-calarial approaches to the sustainable governance of the contemporary territory, providing paradigms, tools and methodologies for the regeneration of the city.

Through four Thematic Sessions, two Keynote Speeches and a Round Table, the Conference aims to focus on teaching experience, trying to advance some interpretations and operational proposals to achieve the improvement of the quality of urban environments.

The event is dedicated to the memory of Giuseppe Campos Venuti, architect, urban planner, university professor, honorary president of the INU-Italian National Institute of Urbanism, who died last September 29, 2019.
