### Abstract

In the last 40 years, new territorial configurations have emerged as a consequence of the consolidation of urban centres and their suburbs. The relevance of these metropolitan phenomena and their governance is subject to debate (Zieman, 2019). This article proposes methodologies to define and compare metropolitan areas, conceptualising them as characteristic of less-populated municipalities whose cores (Dijkstra et al., 2019). On the one hand, both the scope of and the reason for metropolitan governance by authorities across Europe have progressively changed. Strategic visions and plans that tackle mobility, urban planning, employment

way to guide the integration of different and private actors at different scales (Salet et al. 2017). Whereas these metropolitan municipal cooperation, which varies in stake, in a number of European countries, institutional structures aimed at metropolitan set up.

Various models of metropolitan governance greatly in relation to their level of institutional competencies and resources, their institutional arrangements (Salet et al. 2015; ESPON, 2021). These are often unique, and different arrangements of regional governance and planning structures across the continent and their (path-dependent

Aiming at shedding light on the material results of the ESPON METRO and the paper, First, the paper surveys the various institutional arrangements in European Union (EU) countries to help develop a classification pivoted around (i) the degree of institutional action and the actual functional development and planning competencies, and (ii) the degree of correspondence between the types of instruments they adopt to pursue their objectives. This analysis constitute a preliminary contribution to the EU, as well as to reflect on the place in the different contexts.
