FOREWORD

Dear Colleagues,

This book contains the full text of papers and posters presented at the International Conference on Education and New Developments (END 2025), organized by the World Institute for Advanced Research and Science (WIARS).

Education is a fundamental right that accompanies us from the very beginning of our lives. It encompasses every experience we encounter, influencing and shaping our thoughts, emotions, and actions. Whether we engage in formal education within classrooms or learn from the world around us, the process of acquiring knowledge plays a vital role in our personal growth and development. It equips us with the tools to navigate the complexities of life, broadens our perspectives, and empowers us to make informed decisions. This International Conference seeks to provide some answers and explore the processes, actions, challenges and outcomes of learning, teaching and human development. Our goal is to offer a worldwide connection between teachers, students, researchers and lecturers, from a wide range of academic fields, interested in exploring and giving their contribution in educational issues.

We are delighted to have successfully facilitated connections among academics, scholars, practitioners, and individuals who share a common interest in a field abundant with fresh perspectives, ideas, and knowledge. Our event has attracted a diverse range of contributors and presenters, enriching our understanding of human nature and behavior by showcasing the influence of their unique personal, academic, and cultural backgrounds. This diversity is a testament to the international reach of our conference, fostering multi-disciplinary collaborations and fostering intellectual growth and exchange.

END 2025 received 704 submissions, from more than 45 different countries, reviewed by a double-blind process. Submissions were prepared to take form of Oral Presentations, Posters, Virtual Presentations and Workshops. The conference accepted for oral presentation 264 submissions (38% acceptance rate).

The conference also includes one Keynote presentation by Dr. Diane Boothe, Boise State University, USA. We would like to express our gratitude to our invitee.

This conference addressed different categories inside the Education area and papers are expected to fit broadly into one of the named themes and sub-themes. To develop the conference program, we have chosen four main broad-ranging categories, which also covers different interest areas:

- In **TEACHERS AND STUDENTS**: Teachers and Staff training and education; Educational quality and standards; *Curriculum* and Pedagogy; Vocational education and Counselling; Ubiquitous and lifelong learning; Training programs and professional guidance; Teaching and learning relationship; Student affairs (learning, experiences and diversity; Extra-curricular activities; Assessment and measurements in Education.
- In **PROJECTS AND TRENDS**: Pedagogic innovations; Challenges and transformations in Education; Technology in teaching and learning; Distance Education and eLearning; Global and sustainable developments for Education; New learning and teaching models; Multicultural and (inter)cultural communications; Inclusive and Special Education; Rural and indigenous Education; Educational projects.
- In **TEACHING AND LEARNING**: Critical, Thinking; Educational foundations; Research and development methodologies; Early childhood and Primary Education; Secondary Education; Higher Education; Science and technology Education; Literacy, languages and Linguistics (TESL/TEFL); Health Education; Religious Education; Sports Education.
- In **ORGANIZATIONAL ISSUES**: Educational policy and leadership; Human Resources development; Educational environment; Business, Administration, and Management in Education; Economics in Education; Institutional accreditations and rankings; International Education and Exchange programs; Equity, social justice and social change; Ethics and values; Organizational learning and change, Corporate Education.

The contributions were published across two volumes, and this is the Volume 1 of the book titled Education and New Developments 2025, that showcases the outcomes of dedicated research and developments undertaken by authors who are driven by their passion to enhance research methods that directly relate to teaching, learning, and the practical applications of education in the present day. Within its pages, you will find a diverse array of contributors and presenters who expand our understanding of educational matters by sharing their unique personal, academic, and cultural perspectives. Through their valuable insights and experiences, they enrich our exploration and contribute to the growth of educational discourse in our contemporary world.

This first volume only focuses on the main areas of TEACHERS AND STUDENTS and TEACHING AND LEARNING, being the contributions of the other two areas published in Volume 2.

We would like to express thanks to all the authors and participants, the members of the academic scientific committee, and of course, to our organizing and administration team for making and putting this conference together.

Hoping to continue the collaboration in the future.

Respectfully,

Mafalda Carmo

KEYNOTE LECTURE

“REIMAGINING CROSS-DISCIPLINARY ACTIVE LEARNING METHODOLOGIES TO ENGAGE EFL STUDENTS”

Dr. Diane Boothe

*Director of P-20 Outreach and Professor, Department of Literacy, Language and Culture,
College of Education, Boise State University, USA*

Abstract

The continued demand and unique learning environment for English as a Foreign Language (EFL) learners is ever changing as educators focus on best practices to promote optimal learning for 21st century students and meet the needs of our complex interdisciplinary globalized world. Central to the demand for revitalizing the classroom experience is to prepare students to enter the evolving workforce. Cutting-edge EFL skills are often tantamount to achieving success in this endeavor and keeping up with the rapid pace of learning. Not only are EFL students expected to demonstrate observable and measurable English skills, but there is a growing interest and stipulation to demonstrate strengths critical to cross-disciplinary fields as well as collaborative active learning methods. This address investigates student-centered instructional methods that focus on the multidimensional perspectives of active learning environments. Experiences from a variety of disciplines will be highlighted including Science, Technology, Engineering and Mathematics (STEM), emphasizing direct EFL preparation to ensure success and promote purposeful collaboration and engaged English learning. Dynamic teaching strategies and methodologies focusing on active, hands-on learning will be discussed. Challenging student-centered activities will be suggested that can be adjusted for a variety of abilities across age groups featuring key transferable English language competencies. Exploration of best practices that build a culture of innovation and prepare students for EFL content areas will be addressed.

***Keywords:** Cross-disciplinary, student-centered, interdisciplinary, multidimensional, competencies.*

Biography

Diane Boothe is Professor of Literacy, Language and Culture at Boise State University, and served as Dean of the College of Education from 2005-2014. Prior to coming to Boise State University, she was the Department Chair of Curriculum and Instruction and Professor at the University of West Georgia. She served as a bilingual teacher, and elementary and middle school principal. Diane has worked consistently with multilingual populations to bring about change and support the development of innovative educational programs and policies. She creates collaborative partnerships and fosters positive relationships with the community, schools, and agencies that she serves. She received her Doctor of Public Administration degree from the University of Southern California. Her primary research efforts have been in the areas of English Language Learning, Multilingual Education, Diversity and Comparative Education Systems. She coauthored a book titled *In the Eyes of the Beholder: Critical Issues for Diversity in Gifted Education*, focusing a chapter on gender and gifted females when identifying the multidimensional perspectives of giftedness. Diane has served in leadership positions as the President of Georgia Teachers of English to Speakers of Other Languages (TESOL), the TESOL International Higher Education Chair, the TESOL International Nominating Committee, and, for ten years, as the editor of the *TESOL in Action Journal*. She has been selected as the keynote or featured speaker and delivered the plenary session for international and national conferences.

INDEX OF CONTENTS

ORAL PRESENTATIONS

Teachers and Students

Students' systematic repetition as a framework for learning algebra: A case study from teachers' professional development <i>Natalia Karlsson, & Wiggo Kilborn</i>	3
The extracurricular professional internship in the teacher training program in the vocational field of healthcare <i>Martin Karstädt</i>	8
Utilizing knowledge and AI cooperation approaches in professional music training — the TUT experience <i>Hua Hui Tseng</i>	13
Students' mathematics self-efficacy and mathematical literacy abilities <i>Eleni Nolka</i>	17
Me&MyCity project and entrepreneurship education <i>Auli Ojala</i>	22
Video and active learning: Exploring the role of films in training future dance teachers <i>Tatiana Sanches</i>	27
Defining and measuring student learning <i>Clay M. Starlin, & Sue Fan Foo</i>	32
Strengthening traditional family values through educational tourism: The example of “Karina Home” guesthouse <i>Karina Stivriņa, & Velta Ļubkina</i>	37
Exploring sexuality in educational and teaching degree programs <i>Valeria Bruno, & Emiliane Rubat Du Mérac</i>	42
Conceptualization of a diagnostic teaching discourse: A case study <i>Natalia Karlsson, & Wiggo Kilborn</i>	47
The association rules for high school teachers in Taiwan participating in in-service continuing education courses <i>Lung-Hsing Kuo, & Pei-Hua Tsai</i>	51
Exploring Ubuntu: Teaching characters in selected drama text as a means of “sharing” and community building <i>Bridget Mangwegape</i>	56
Artificial Intelligence tools in specialized MBA coursework for medical professionals <i>Les M. Sztandera, & Adam Dicker</i>	61
Addressing the need for comprehensive sexuality education in Italy <i>Valeria Bruno, & Emiliane Rubat Du Mérac</i>	65

Exploring teachers' perceptions of self-regulated learning in primary schools: Insights from intermediate-phase teachers in South Africa <i>Keneilwe Agbenyegah, & Bernadette Geduld</i>	69
“Flying school of teaching internships” – in search of an alternative model for implementation of teacher internship <i>Agnieszka Koterwas, Edyta Nowosielska, & Małgorzata Zambrowska</i>	74
An exploration on the association rules of secondary education teacher qualification examination in Taiwan <i>Lung-Hsing Kuo, & Pei-Hua Tsai</i>	79
Development of a driving style feedback method aimed at adaptive learning in safe driving education <i>Maki Arame, Yoshiko Goda, Masashi Toda, & Junko Handa</i>	84
Student teachers' beliefs about self-assessment <i>Ida Szucs Zagyvane</i>	89
Teaching Romani literatures in a global classroom <i>Anita Tarnai</i>	94
Ubiquitous and lifelong learning: A Latin American experience <i>Claudia Cintya Peña Estrada, Gibrán Aguilar Rangel, Omar Bautista Hernández, & Luis Ambrosio Velázquez García</i>	98
Modelling and reflection on instructional activities (MaRIA) framework: The voice of participants in the TAP-TS project <i>Bento Cavadas, Neusa Branco, Elisabete Linhares, Susana Colaço, Conor Galvin, & Elena Revyakina</i>	103
Review of the literature in learning support in STEM education at the higher education level <i>Janak Adhikari, Neil Anderson, & Aidan McGowan</i>	108
Concept definition and concept image of basic spatial geometry concepts among junior high-school pupil <i>Shaker Rasslan, & Samaher Zoabe</i>	113
Exploring mentorship experiences of bachelor of education student teachers during teaching practice: Perspectives on conflict of mentor and mentee roles <i>Ratokelo Willie Thabane</i>	118
Examining the effect of learning management systems (LMSS) on part-time lecturers' teaching practices at a South African university of technology <i>Walter Matete, Paseka Patric Mollo, & Bridget Mangwegape</i>	123
Theoretical lesson framework or design organizational chart <i>Claudia Veronica Ciobanu</i>	128
 <u>Teaching and Learning</u>	
Strategies to improve student engagement: Comparison of assessment results and student feedback <i>Ana Paula Nolasco, Maria Paula Oliveira, & Paolo Vettori</i>	133

Inclusion of learners with barriers to learning in mainstream schools: A psycho-social support intervention	138
<i>Appolonia Masunungure, Thabo Makhalemele, Matabe Rosa Modiba, & Omphile Madiba</i>	
Using concept maps to enhance students' comprehension of telecommunications	143
<i>Gerasimos Pagiatakis, Nikolaos Voudoukis, Dimitrios Uzunidis, & Dimitrios Karaoulanis</i>	
Redefining STEM education: Initiating and developing a pre-college aerospace team	148
<i>Evan L. Barron, Elizabeth H. Kniskern, Kevin L. Simmons, & Shawna L. Christenson</i>	
The emergence of STEAM and its pedagogical implications: A re-evaluation of the psychomotor domain	151
<i>Uchenna Kingsley Okeke, & Sam Ramaila</i>	
Rethinking technology-driven simulation in health education: A qualitative evaluation of low-fidelity approaches	156
<i>Susan Canning</i>	
Teaching law in the age of AI: Time for curriculum reform?	161
<i>Allison Geduld</i>	
STEM and space: Advancing real world aerospace to pre-college students	166
<i>Shawna L. Christenson, John D. Moore, & Kevin L. Simmons</i>	
Teachers' TPACK: Evaluating the strengths and weaknesses of online assessment in K-12 science instruction	171
<i>Uchenna Kingsley Okeke, & Sam Ramaila</i>	
Digital learning communities: A streamlined approach to learning support in technology education	175
<i>Janak Adhikari, Neil Anderson, & Aidan McGowan</i>	
A constructivist pathway to refreshing mathematical understanding	180
<i>Andr�as Margitay-Becht</i>	
Mystical poetry and sport: An experience of didactic transposition based on the students' interest	185
<i>Yailin Mart�nez-Hierrezuelo, & Betsaida Sedano Mu�oz</i>	
What helps you to learn? Insights from university students and feedback from neuroscience	189
<i>Mar�a �ngeles Vicente-Torres</i>	
Employing Kahoot gaming tool to teach electromagnetic propagation and signal transmission through optical fibers	194
<i>Nikolaos Voudoukis, Gerasimos Pagiatakis, Dimitrios Uzunidis, & Dimitrios Karaoulanis</i>	
"How will I manage?" Students' perceptions and expectations before an exam	199
<i>Giulia Maria Cavaletto, & Federica Cornali</i>	
Student competitions: Opportunities to practice interdisciplinary knowledge in practical problem solving	203
<i>Jaana Taar, Kristi Paas, & Tiina V�nt</i>

AN INCLUSIVE APPROACH TO INSPIRE CREATIVITY AND TEAM BUILDING THROUGH MODULAR ARCHITECTURE DRAWING

Francesca Maria Ugliotti, Michele Zucco, & Margherita Cassis

Department of Structural, Geotechnical and Building, Politecnico di Torino (Italy)

Abstract

Integrating pedagogical innovations and inclusive approaches in university education represents a meaningful strategy to foster active and cooperative learning. Developing transversal skills such as collaboration and critical problem-solving is essential for the technical professions, such as engineers and architects, who face the increasingly complex problems of this millennium. This article describes a team-building experience as part of a first-year course in Building Drawing at Politecnico di Torino, aiming to enhance transversal skills and foster interaction between students from heterogeneous backgrounds. The experiential activity proposes a creative challenge in the field of modular architecture by using the 3D-printed basic element proposed by the architect Walter Gropius. The analysis of the results, conducted using questionnaires and qualitative observations, showed improved relational skills and strengthened student motivation. This experience shows how innovative teaching methodologies can contribute to academic success and prepare students to manage group dynamics in the professional context of building engineering.

Keywords: *Creative design experience, 3D printing, active learning, student engagement, higher education.*

1. Introduction

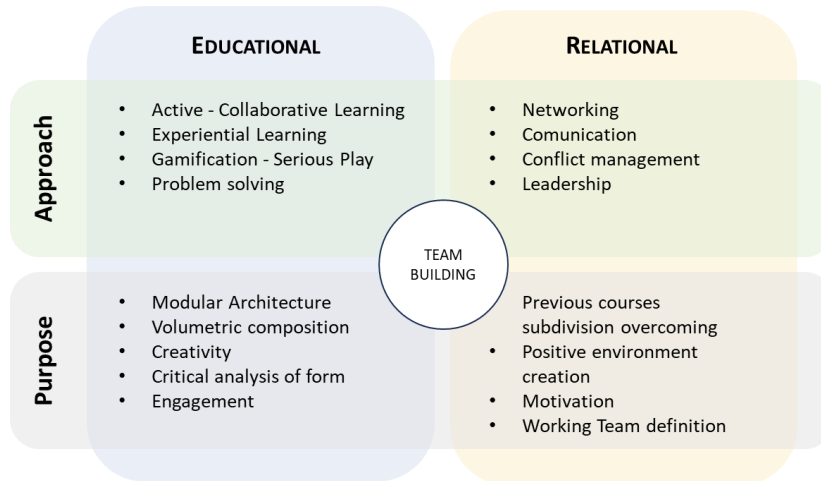

In recent years, team-building activities have emerged as effective tools for improving group dynamics and transversal skills in educational contexts, including university programs. In the field of building engineering, where multidisciplinary collaboration is a fundamental requirement for professional practice, the ability to work in teams is as crucial as technical expertise. However, traditional university courses tend to favour an individualistic approach to learning, overlooking the potential of cooperative methodologies in enhancing both student engagement and their preparation for the workforce. The scientific literature highlights that integrating team-building experiences into higher education can improve academic performance, foster a sense of belonging to the group, and enhance communication skills (Oakley et al., 2004). Recent studies show that approaches such as cooperative learning (Johnson & Johnson, 2017) and problem-based learning promote active learning and collaborative problem-solving for complex issues, thereby improving teamwork management skills. In particular, experiences in the engineering field have demonstrated that practical exercises and project challenges based on collaboration increase student motivation and engagement. Within this context, the present study describes a team-building activity designed for first-year Building Engineering students to develop transversal skills and promote a more cooperative learning process.

2. Methods

The team-building approach was experienced in the Building Drawing course at Politecnico di Torino, which lays the methodological foundations of Drawing as a communication language for engineers. As the first core course of the Building Engineering Bachelor's program, it brings together students who were previously distributed according to different criteria. Concerning this point, the objective of the experiential activity is to establish a collaborative environment and foster students' mutual acquaintance. These aspects are considered essential both for the course, which involves practical work in groups and for establishing effective interpersonal relationships that are fruitful for subsequent teaching. Sixty-five students from diverse educational backgrounds, including high schools, technical institutes, and surveyor schools, attended the experience.

The participatory activity proposes a creative challenge in the field of modular architecture and involves the definition of volumetric forms using the basic modules proposed by the architect Walter Gropius (Seelow, 2018). It has been designed with the dual objective of strengthening the educational experience and developing relational skills, as summarized in Figure 1.

Figure 1. Methodological approach.

From a pedagogical perspective, adopting active approaches within the course (Ugliotti et al., 2023) is investigated to directly involve students in the educational process, stimulating their participation, reflection, and collaboration. Various techniques such as collaborative and experiential learning, gamification and serious play, and problem solving have been integrated into the experience to establish a synergy between theory and practice in order to facilitate the simultaneous development of disciplinary and transversal soft skills.

Engaging in active learning experiences compels students to confront and solve complex problems in collaborative contexts, thereby stimulating critical thinking, and adaptability. In this case, the activity was also able to foster the critical analysis of form, creativity, volumetric composition, and the use of modular architecture, prompting a deep reflection on expressive and constructive methodologies.

This type of learning impacts on the relational dimension of the students, stimulating skills of communication and networking and bringing out the predisposition to leadership and the need for conflict management. Creating a positive environment, and cultivating shared motivation contribute to forming cohesive and functional workgroups thereby rendering the team building experience a central and transversal component of the educational journey that integrates pedagogical goals with relational needs.

The activity involved three main phases: an initial design phase, a practical execution phase, and a subsequent evaluation phase (Figure 2).

Figure 2. Activity phases.

2.1. Design of the activity

The preparatory phase of the activity entailed the digitalization of Walter Gropius's 1922 "Baukasten im Großen" modular forms, which were modeled in 3D using Autodesk Revit software. A basic kit consisting of 9 modules was then defined and 40 identical kits were printed via a 3D printer. A simulation conducted with a small group of individuals allowed for the optimal organization of timing, scheduling and dynamics of the activity, identifying its strengths and proactively addressing its weaknesses.

Figure 3. Design phase.

2.2. Execution of the activity

The team-building activity was structured into multiple phases. Initially, the students were divided into groups of two or three individuals based on their physical proximity to each other. Each group was provided with a starter kit and given specific instructions to assemble the modules into free compositions. To ensure a comprehensive record of the activity, each composition created was meticulously documented via the completion of a form specifying the students' names, the number and type of pieces used, the name given to the composition, and the attachment of a photograph. In the subsequent stage of the experiment, the small groups were joined two by two, thereby providing the students with the opportunity to construct using twice the number of modules. The groups were then further reunited without utilizing the logic of proximity, with the aim of fostering new interactions and increasing the number of available pieces. In the following phases, the groups were reorganized without increasing the number of participants, with the sole objective of facilitating interactions among as many individuals as possible.

Each phase lasted 10 minutes, in every phase each composition was documented using the form.

Figure 4. Activity execution.

2.3. Evaluation of the activity

During the activity, the teacher and collaborators paid special attention to qualitative observations of the dynamics among the students and the effectiveness of the planned task. Moreover, a questionnaire was administered to the students at the end of the last session to gather impressions of the teaching approach used and understand the level of engagement achieved.

3. Discussion

The team-building experience revealed several relational dynamics with important pedagogical and social implications. During the activity, the teacher and her collaborators observed that, through a spontaneous presentation phase (Figure 5. a), participants overcame interpersonal barriers, fostering a climate of openness and reciprocity.

From the first phase, devoted to small group formation, different approaches to problem solving emerged. Most participants adopted active collaboration (Figure 5. b), while in some cases a more individualistic approach was observed (Figure 5. c), in which each member focused independently on his or her own construction, emphasizing personal operational styles. In later stages, and thus with larger groups, the relational approach took on even more diverse forms. Some groups adopted parallel methods that facilitated a synergistic and equitable distribution of tasks (Figure 5. d), while others experimented

with sequential strategies (Figure 5. e) in which one segment of the group devoted itself to constructing the form and another to prototyping the composition.

The latter dynamic is symptomatic of a spontaneous predisposition to effective coordination. Just in a few isolated cases, a lack of engagement by some participants was observed, highlighting the need to implement motivational and inclusive strategies, as well as to create an environment more conducive to collaborative activities, in order to encourage active participation and the development of optimal group dynamics.

Figure 5. Main relational dynamics observed.

The post-activity questionnaire highlighted additional experiential and relational dynamics. Over 75% of participants rated the experience as extremely or very positive. In addition, communication and creativity emerged as the most frequently utilized soft skills, proving to be essential for effective teamwork and problem-solving (Figure 6).

Figure 6. Valuation form results.

On the whole, these operational strategies contributed significantly to the development of key relational competencies and soft skills, including communication, networking, conflict management, and leadership. Such skills are indispensable for fostering cohesive and efficient teams in educational contexts, while simultaneously providing valuable preparation for the future Building Engineer.

4. Conclusions

This study has documented and analyzed, from a pedagogical perspective, a team-building activity aimed at enhancing transversal skills and fostering interaction among students from diverse backgrounds. The creative challenge, set in the context of modular architecture, involved the use of building modules inspired by Gropius' designs, modeled and 3D printed, offering participants the opportunity to reinterpret architectural space in their own personal way. In addition, it allowed them to investigate the compositional, graphic, and spatial principles that serve as its theoretical and practical underpinnings.

This approach fostered significant social interaction, stimulating empathy and the ability to critically tackle complex design challenges through dialogue and cooperation. The results highlight a marked improvement in relational and collaborative skills, along with a notable enhancement of creativity made tangible through the use of 3D printing. Furthermore, it is evident that the instructor's role has undergone a progressive transformation, from that of a mere transmitter of knowledge to a designer of comprehensive learning experiences that effectively maximize active student engagement.

Overall, this pedagogical model, replicable in various educational settings, significantly contributes to the discourse on educational innovation, demonstrating how advanced technological tools and interdisciplinary approaches can develop academic and relational competencies on solid, critical, and collaborative foundations, break the monotony of passive listening, and promote widespread, conscious participation.

Acknowledgments

The authors are pleased to thank all the students of the Building Drawing course of the first year of Building Engineering of the Politecnico di Torino who participated enthusiastically in this advanced didactic experimentation.

This contribution is the result of a common work of the Authors. However, specific sections can be attributed as follows: F.M.U. authored the Abstract, Introduction, and Evaluation of the Activity; F.M.U. and M.Z. worked on the Methods; M.C. was responsible for the Activity Design and Execution; M.Z. contributed to the Discussion and the Conclusions
