A MANIFESTO FOR (DE)GROWTH

DISRUPTIVE (DE)GROWTH REPOSITORY OF SOUTHERN ECOSYSTEMS

Hunguta formed after the open call for the 2019 Oslo Architecture Triennale, taking the Xitsonga word for 'decrease' as its name. The multidisciplinary collective engages with degrowth practices in the context of the Global South. The project in Sub-Saharan Africa – developed through months and in dialogue with local communities –, was transformed into an atlas exhibited in Oslo in 2019. Through images, diagrams, and photographs, the collective both tests and challenges degrowth principles in a manifesto on the dynamic repository of southern ecosystems. In doing so, the atlas questions the absolute viability and application of degrowth principles in territories subjected to exploitation and 'slow growth' over decades – if not centuries.

Is degrowth an absolute term?

Hunguta is a collective of architects, designers, and multidisciplinary artists loosely centred between Cape Town, Cambridge, Harare, Kampala and Zurich. We draw our name from the Xitsonga word 'hunguta' meaning 'decrease'.

We established our collective as a response to the call launched by the 2019 Oslo Architecture Triennale curators under the theme "Enough, an Architecture of Degrowth". During an 8-months-long process the team – formed by Tomà Berlanda, Nerea Amorós Elorduy, Khensani de Klerk, Tao Klitzner, Scott Lloyd, Maxwell Mutanda and Sunniva Viking – co-produced research to explore how degrowth is understood in, and embodied across, spatial practices of sub-Saharan Africa ecosystems. As architects, designers, researchers, teachers, and artists either from, based in, or working on, the African continent, we decided to engage with the audience by providing access to a collection of novel case studies. We conceived an installation to present a living atlas, a room-scaled learning tool that subverts established modes of conceiving degrowth as an easily transported, translated, and imposed paradigm.

The rethought repository, or matrix of objects/methods/systems was initiated by a gathering of the collective's previous experiences as we questioned the ecosystemic relationship between context and degrowth, the use of diverse languages and methods. The sequence which launched in Oslo promoted further collaborations to trigger new languages that added richness and layers to the work.

Throughout the process we challenged the reading of the 'South' through the divisive lens of the colonial theodolite, positing as an alternative the use of a kaleidoscopic perspective. Discussing how the kaleidoscopic analysis and representation of the work might create new practices, we engaged in discussing our different agencies as an ecosystem of our own. Through its ever-changing conditions, our understanding of a contemporary archive intended to trigger a subversion of Western-based canonical modes of conceiving how architects, designers, and makers facilitate the building of, and learning from, human settlements. The references we chose to document in our repository are representative of the richness of practices, narratives, viewpoints, and experiences taking place in sub-Saharan Africa. Moreover, the kaleidoscopic view we present of them has been designed to entice discussion, questions, and trigger new actions amongst makers and viewers.

Taken as a whole, the repository is dynamic, ever-changing with each member of the audience creating its own experience, thus reflecting the context of Southern ecosystems which is characterised by flux. Envisioned as an unconventional spatial experience allowing for multiple readings, "Disruptive Degrowth, a repository of Southern ecosystems" articulates a multifaceted position of what it means in the Anthropocene to understand degrowth from a southern vantage point, and how to engage with validating diverse spoken, visual, iconographic, and material languages. These concepts optimise their existence and archive outside of the conventional Western canonical understanding of repository. We believe the current immobility, closure, and impermeability of knowledge created by a minority world and applied to the majority world is not suited to revealing and advancing disruptive degrowth globally, and especially to projects in southern ecosystems.

By sharing the atlas of southern ecosystems emerging from our remote collaboration, we aim for it to be understood as a layered lens into established and evolving spatial practices in sub-Saharan Africa. It is a lens developed both through our method of finding, interpreting, and sorting projects, and through the creation of an

alternative and participative spatial device in order to document, display, and archive the work. For us, thinking about human-made and evolving Southern ecosystems became an ignition point of agency. We hope that analysing and talking about these practices might serve for continuous collaborative learning and participation across the globe: a transition from a relative to a relational experience of thought, space creation and place. NOTE

Hunguta Design is collaborative assembly of architects, designers and multidisciplinary artists loosely centered between Cape Town, Harare, Kampala, Cambridge, and Zurich. The collective includes Tomà Berlanda, Nerea Amorós Elorduy, Khensani de Klerk, Tao Klitzner, Scott Lloyd, Maxwell Mutanda, and Sunniva Viking.

Tomà Berlanda

[<toma.berlanda@uct.ac.za>](mailto:toma.berlanda@uct.ac.za)

Architect and Professor of Architecture at the School of Architecture, Planning and Geomatics at the University of Cape Town. He co-founded ASA Studio (2012-14) and studio.space (ongoing).

Nerea Amorós Elorduy

Architect and researcher native of Barcelona. She taught and contributed to creating the School of Architecture at the University of Rwanda. She co-founded ASA Studio and Creative Assemblages, which she also leads.

Khensani de Klerk

Bachelor in Architecture (2017) and City Planning (Hons) (2019), University of Cape Town. She is the founder and co-director of Matri-Archi(tecture) and a director of the Youth in Property Association (YIPA), South Africa

Tao Klitzner

Architecture Graduate from the University of Cape Town, where she was a member of the Space of Good Hope research studio that focused on community engagement in Delft, Cape Town.

Scott Lloyd

Arquitecto y máster en Arquitectura, Instituto Federal Suizo de Tecnología (ETH). Ha trabajado en proyectos de arquitectura, investigación, publicación y curatoriales, y actualmente es director del consejo del grupo de investigación de arquitectura TEN.

Architect and master in Architecture, Swiss Federal Institute of Technology (ETH). He has worked on architecture, research, publishing, and curatorial projects, and is currently director of the board for the architecture research group TEN.

Maxwell Mutanda

Architect, the Bartlett, University College London. MSc in Sustainable Urban Development, University of Oxford. He is a pluridisciplinary artist / researcher / designer and cofounder of the design research firm Studio [D] Tale.

Sunniva Viking

M.Arch, KTH, 2002. MA in African Studies, SOAS, 2010. She is currently consulting in supporting participatory design and building processes for Early Childhood Development Centres (ECDs) in remote villages in eastern Zambia.
