The quality of relationships among people is an increasingly important value

Paolo Tamborrini

Research, Politecnico di Torino, Italy

paolo.tamborrini@polito.it

Erika Vicaretti

PhD student, Politecnico di Torino, Italy (erika.vicaretti@polito.it)

The pursuit of the communities' wellness is a main theme whose, shifting from purely economical evaluations, embraces socio-cultural sphere too. In the current social and environmental unease we live, the attention on social sustainability is emerging as a new turning point for design processes innovation. Setting the human issue at the centre of the project is possible to innovate the methodology by the enrichment of new variables that widen its complexity and solve current needs of the society more effectively.

Systemic Design methodology studies this complexity and is starting focusing on humanities, innovating own design process. Indeed, after working mainly on the dynamics of industrial symbiosis starting from the observation of Nature, the Systemic Design approach is now orienting its own attention on the subject and its territory. Focusing on the importance of the relation between subjects and territory it emerges the importance of exchange and collaboration dynamics.

It means that: on one hand only preserving and feeding the humanities issues as potential richness it is possible to aspire to the formation of multicultural relationships nets towards an improved social sustainability; on the other hand the environmental sustainability could be reached only thinking the territory as a place from which we draw resources but we use contemporaneously according with its natural time of autogeneration.

In particular we propose a case study in which the complexity of socio-cultural relationships represents the plusvalue to increase the quality of exchanges among different communities. Our project is based on a network among people involved in urban events, aimed to enrich them by the improvement of their relationships pattern. Considering the relational exchange an exploitable resource to improve also the event itself, we design a better dialogue among subjects with different cultural background but interested in the same (event's) theme.

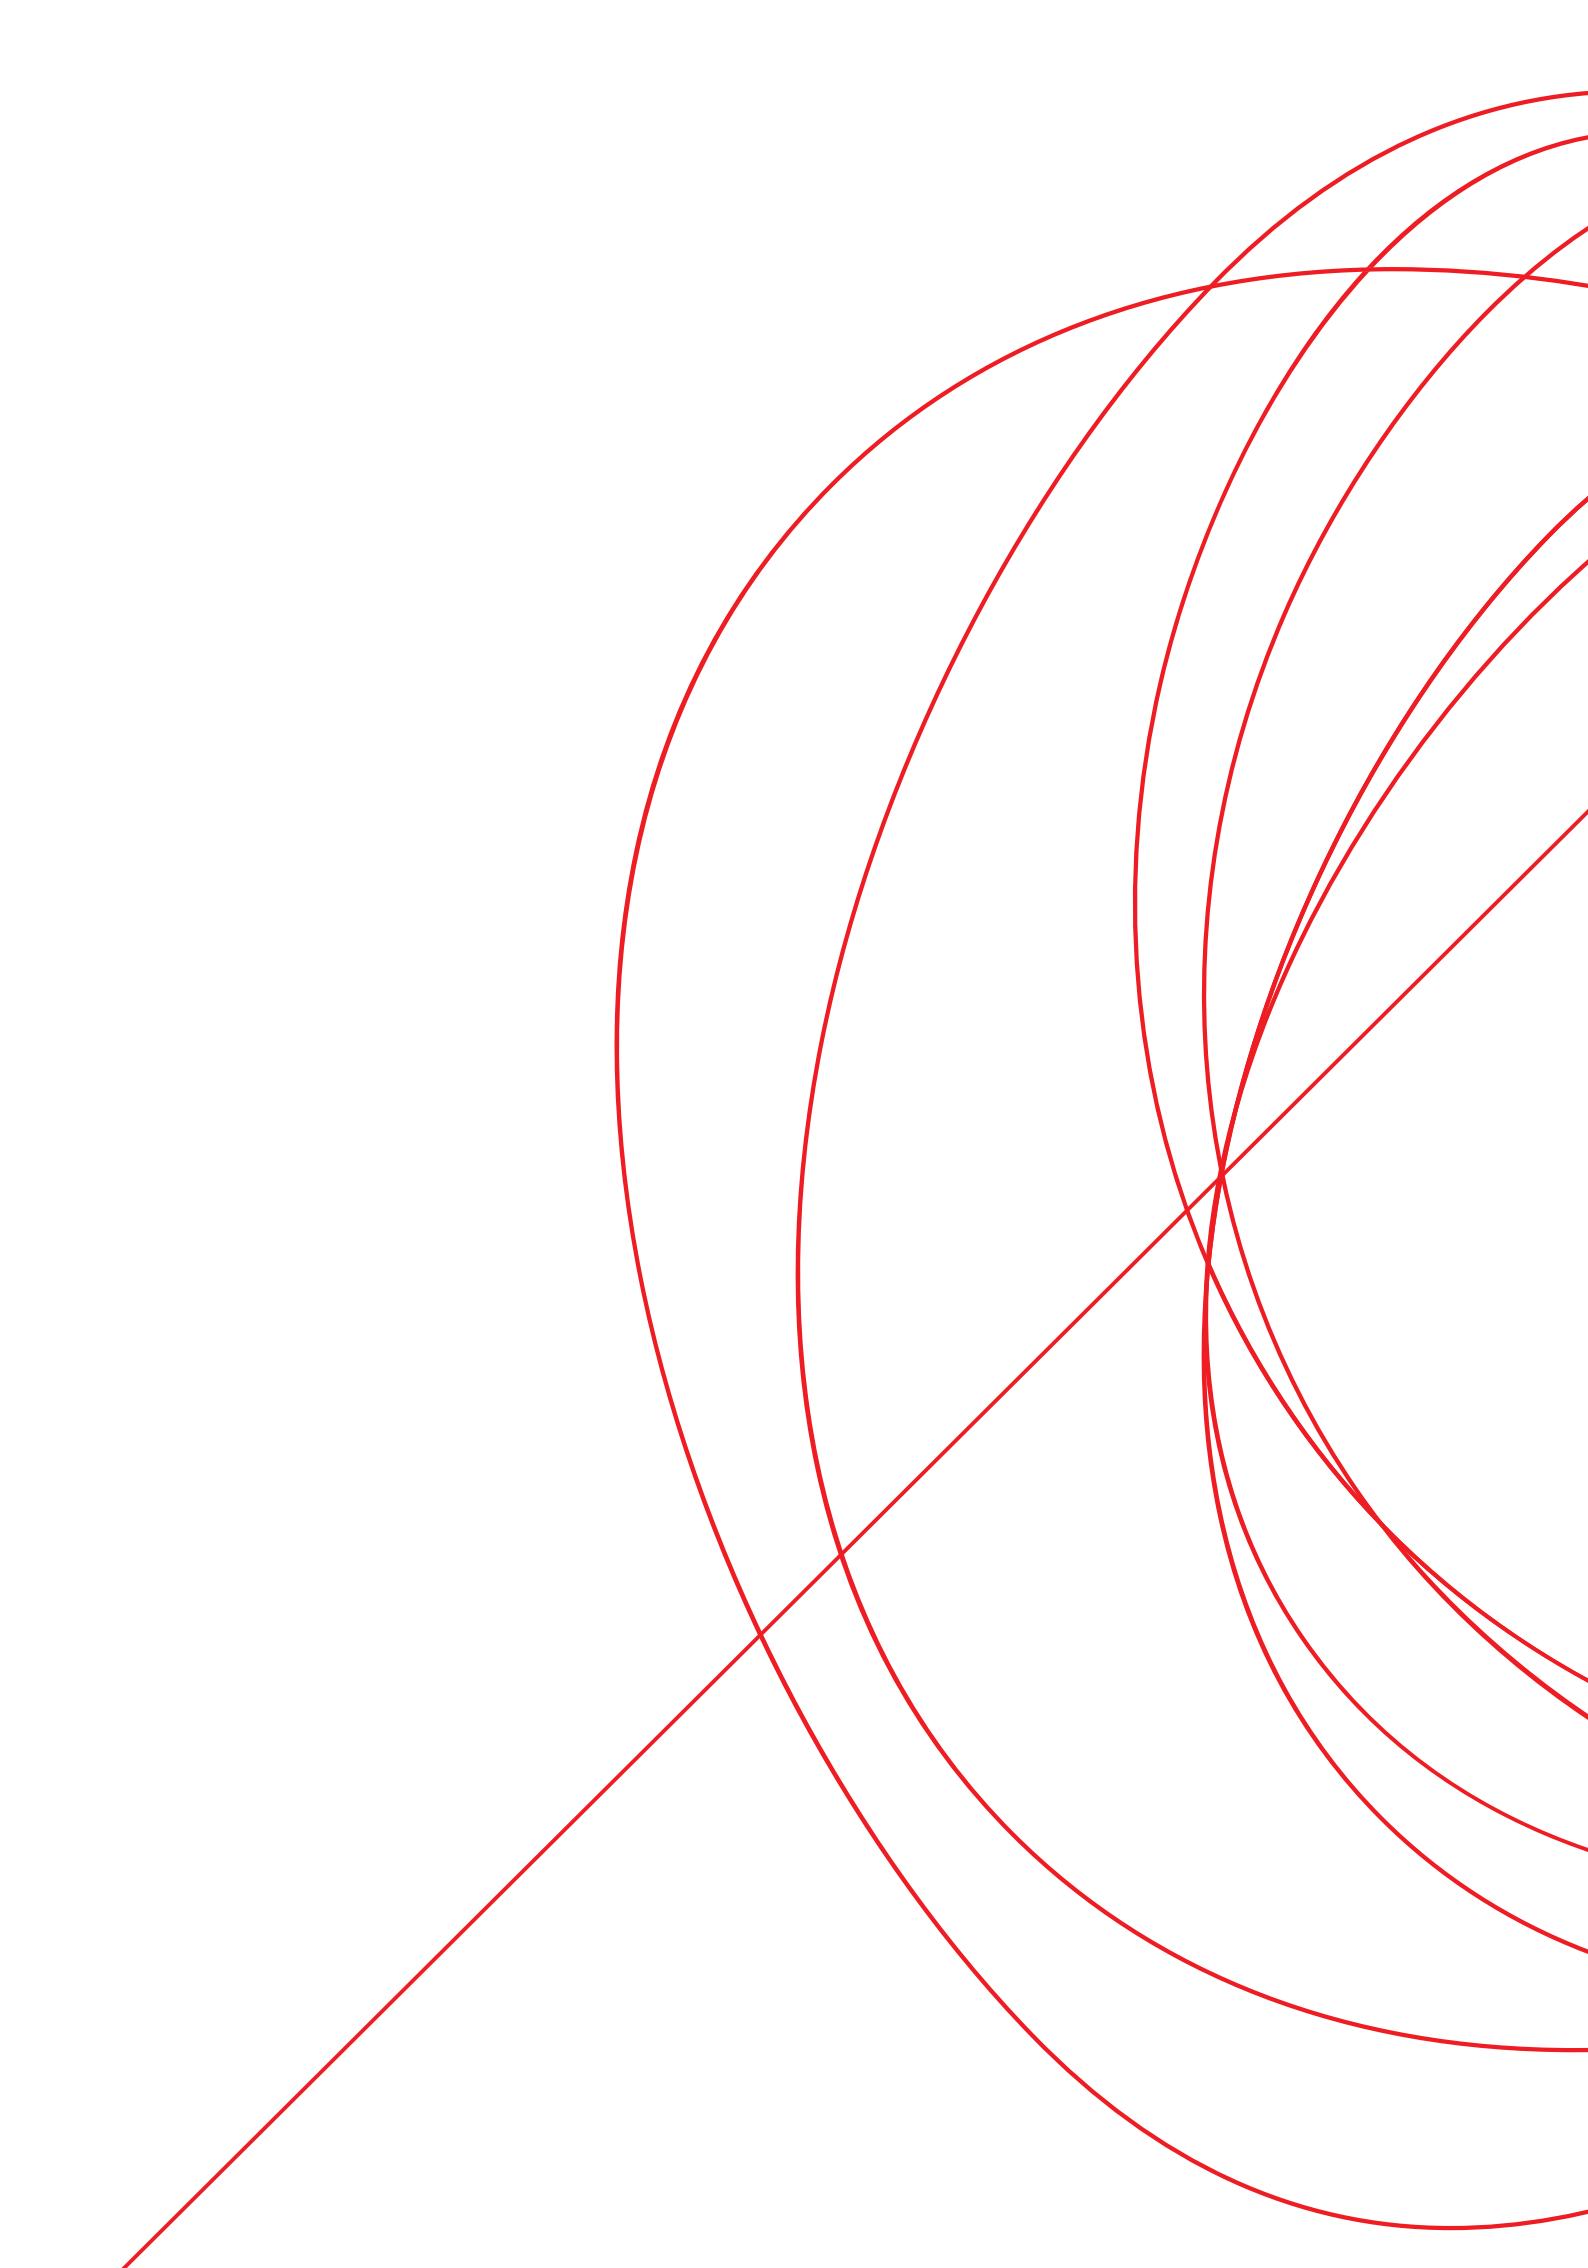

This relationships network has a double nature. It refers to:

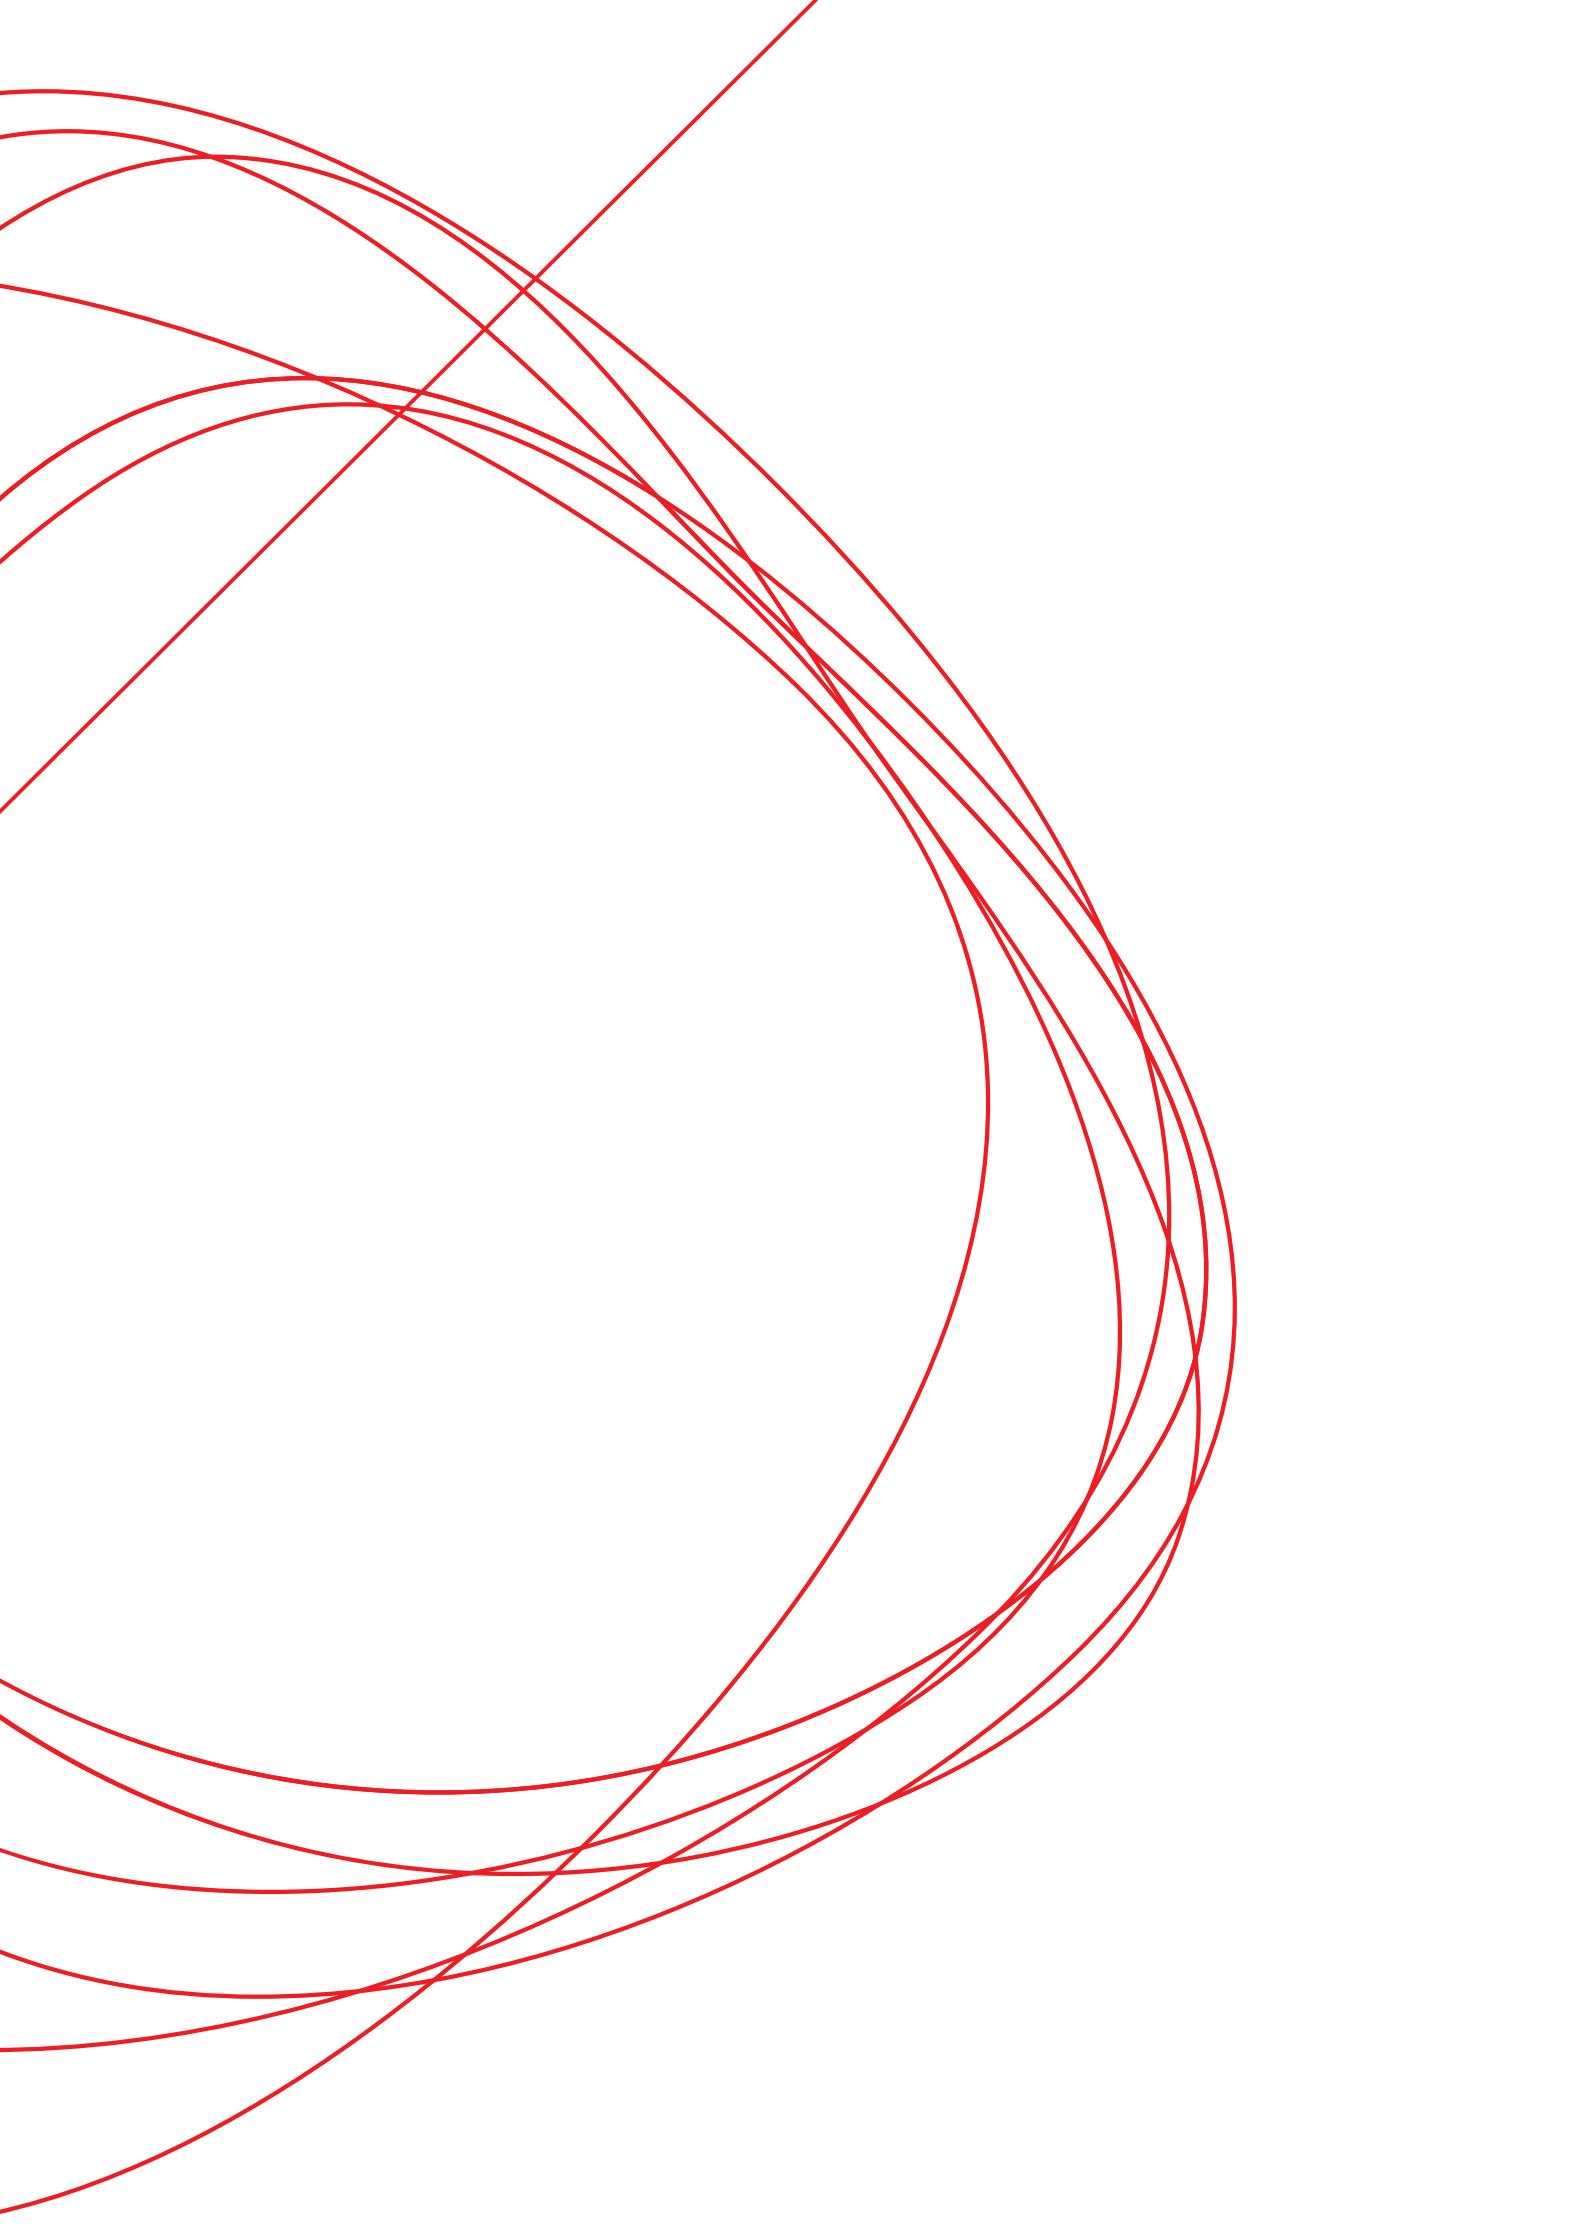

- a virtual network which, by the worldwide web channel (socialnetworking and georeferencing), allowed to connect people that are geographically distant;
- a real network which, starting from the virtual one, materializes itself generating real meeting.

In this way the global diffusion of the social networks becomes an useful tool for the communication need of the communities. It has been demonstrated how a virtuously use of global dynamics into a project could represent respectively a constructive improvement and an augmented link with daily human habits.
