Preface	xiii
Foreword	xv
<b>1 Interpolation, Approximation, and Error in One Dimension</b>	<b>1</b>
1.1 Linear Interpolation and Triangular Basis Functions	1
1.2 Interpolation and Basis Functions of Higher Polynomial Order	4
1.2.1 Lagrange Interpolation	4
1.2.2 Hermite Interpolation	6
1.3 Error in the Representation of Functions	14
1.3.1 Interpolation Error	14
1.3.2 Spectral Integrity and Other Frequency Domain Considerations	18
1.4 Approximation of Functions with Border Singularities	23
1.4.1 Singular Expansion Functions	26
1.4.2 Singular Functions that Comply with Exact Approximations in Terms of Singular Plus Polynomial Basis Functions	27
1.4.3 Singular Functions that Do Not Permit Exact Approximations in Terms of Singular Plus Polynomial Basis Functions	30
1.5 Summary	34
References	34
<b>2 Scalar Interpolation in Two and Three Dimensions</b>	<b>35</b>
2.1 Two- and Three-Dimensional Meshes and Canonical Cells	35
2.1.1 Conforming Meshes and Fundamentals of Geometrical Database Structure	36
2.2 Interpolatory Polynomials of Silvester	38
2.3 Normalized Coordinates for the Canonical Cells	41
2.4 Triangular Cells	43
2.4.1 Cell Geometry Representation and Local Vector Bases	43

2.4.2	Lagrangian Basis Functions, Interpolation, and Gradient Approximation	47
2.4.3	Interpolation Error	51
2.4.4	Spectral Integrity and Other Frequency Domain Considerations	52
2.4.5	Curved Cells	55
2.5	Quadrilateral Cells	58
2.5.1	Cell Geometry Representation and Local Vector Bases	58
2.5.2	Lagrangian Basis Functions, Interpolation, and Gradient Approximation	61
2.6	Tetrahedral Cells	62
2.6.1	Cell Geometry Representation and Local Vector Bases	62
2.6.2	Lagrangian Basis Functions	65
2.7	Brick Cells	67
2.7.1	Cell Geometry Representation and Local Vector Bases	67
2.7.2	Lagrangian Basis Functions	71
2.8	Triangular Prism Cells	74
2.8.1	Cell Geometry Representation and Local Vector Bases	74
2.8.2	Lagrangian Basis Functions	77
2.9	Generation of Shape Functions	79
	References	79
<b>3</b>	<b>Representation of Vector Fields in Two and Three Dimensions Using Low-Degree Polynomials</b>	<b>81</b>
3.1	Two-Dimensional Vector Functions on Triangles	81
3.1.1	Linear Curl-Conforming Vector Basis Functions	82
3.1.2	A Simpler Curl-Conforming Representation on Triangles	84
3.1.3	Alternate Approach: A Divergence-Conforming Representation on Triangles	86
3.2	Tangential-Vector versus Normal-Vector Continuity: Curl-Conforming and Divergence-Conforming Bases	87
3.2.1	Additional Terminology	89
3.3	Two-Dimensional Representations on Rectangular Cells	89
3.4	Quasi-Helmholtz Decomposition in 2D: Loop and Star Functions	92
3.5	Projecting between Curl-Conforming and Divergence-Conforming Bases	94
3.6	Three-Dimensional Representation on Tetrahedral Cells: Curl-Conforming Bases	95

3.7	Three-Dimensional Representation on Tetrahedral Cells: Divergence-Conforming Bases	97
3.8	Three-Dimensional Expansion on Brick Cells: Curl-Conforming Case	98
3.9	Divergence-Conforming Bases on Brick Cells	98
3.10	Quasi-Helmholtz Decomposition on Tetrahedral Meshes	99
3.11	Vector Basis Functions on Skewed Meshes or Meshes with Curved Cells	100
3.11.1	Base and Reciprocal Base Vectors	101
3.11.2	Covariant and Contravariant Projections	104
3.11.3	Derivatives in the Parent Space	107
3.11.4	Restriction to Surfaces	109
3.11.5	Example: Quadrilateral Cells	112
3.12	The Mixed-Order Nédélec Spaces	112
3.13	The De Rham Complex	118
3.14	Conclusion	120
	References	120
<b>4</b>	<b>Interpolatory Vector Bases of Arbitrary Order</b>	<b>123</b>
4.1	Development of Vector Bases	123
4.2	The Construction of Vector Bases	123
4.3	Zeroth-Order Vector Bases for the Canonical 2D Cells	125
4.4	Zeroth-Order Vector Bases for the Canonical 3D Cells	126
4.5	The High-Order Vector Basis Construction Method	127
4.5.1	Completeness of the High-Order Vector Bases for 2D Cells	128
4.5.2	Completeness of the High-Order Vector Bases for 3D Cells	129
4.5.3	Use of Shifted Silvester Polynomials to Move the Interpolation Points to the Element Interior	130
4.6	Vector Bases for the Canonical 2D Cells	131
4.6.1	The $\hat{\alpha}(p, \xi)$ Polynomials with Edge-Interpolation Points on Only One Edge of a Triangular Cell	131
4.6.2	The $\hat{\alpha}(p, \xi)$ Polynomials with Edge-Interpolation Points on Only One Edge of a Quadrilateral Cell	133
4.6.3	Order $p$ Vector Bases for Triangular Cells	135
4.6.4	Order $p$ Vector Bases for Quadrilateral Cells	137

4.7	Vector Bases for the Canonical 3D Cells	140
4.7.1	Tetrahedral Cells	140
4.7.2	Brick Cells	147
4.7.3	Triangular Prism Cells	152
4.8	Synoptic Tables	161
	References	181
<b>5</b>	<b>Hierarchical Bases</b>	<b>183</b>
5.1	The Ill-Conditioning Issue	184
5.2	Hierarchical Scalar Bases	188
5.2.1	Tetrahedral and Triangular Bases	188
5.2.2	Quadrilateral Bases	200
5.2.3	Brick Bases	201
5.2.4	Prism Bases	203
5.3	Hierarchical Curl-Conforming Vector Bases	204
5.3.1	Tetrahedral and Triangular Bases	207
5.3.2	Quadrilateral and Brick Bases	217
5.3.3	Prism Bases	227
5.3.4	Condition Number Comparison	242
5.4	Hierarchical Divergence-Conforming Vector Bases	248
5.4.1	Reference Variables on the Face in Common to Adjacent Cells	250
5.4.2	Tetrahedral Bases	252
5.4.3	Prism Bases	256
5.4.4	Brick Bases	260
5.4.5	Numerical Results and Comparisons with Other Bases	264
5.5	Conclusion	267
	References	268
<b>6</b>	<b>The Numerical Solution of Integral and Differential Equations</b>	<b>271</b>
6.1	The Electric Field Integral Equation	271
6.2	Incorporation of Curved Cells	274
6.3	Treatment of the Singularity of the Green's Function by Singularity Subtraction and Cancellation Techniques	279
6.4	Examples: Scattering Cross Section Calculations	286
6.5	The Vector Helmholtz Equation	291
6.6	Numerical Solution of the Vector Helmholtz Equation for Cavities	292

6.7	Avoiding Spurious Modes with Adaptive $p$ -Refinement and Hierarchical Bases	297
6.8	Use of Curved Cells with Curl-Conforming Bases	298
6.9	Application: Scattering from Deep Cavities	300
6.10	Summary	302
	References	302
<b>7</b>	<b>An Introduction to High-Order Bases for Singular Fields</b>	<b>305</b>
7.1	Field Singularities at Edges	306
7.2	Triangular-Polar Coordinate Transformation	309
7.3	Singular Scalar Basis Functions for Triangles	311
7.3.1	Lowest Order Bases of the Substitutive Type	311
7.3.2	Higher Order Bases of the Substitutive Type	312
7.3.3	Additive Singular Basis Functions	314
7.3.4	The Irrational Algebraic Scalar Basis Functions	317
7.3.5	Example: Quadratic Basis with One Singular Degree	321
7.3.6	Example: Cubic Basis with Two Singular Degrees	322
7.3.7	Evaluation of Integrals of Singular Bases	324
7.4	Numerical Results for Scalar Bases	328
7.4.1	Eigenvalues of Waveguiding Structures with Edges	329
7.4.2	Effect of Varying the Number of Radial and Azimuthal Terms	334
7.5	Singular Vector Basis Functions for Triangles	342
7.5.1	Substitutive Curl-Conforming Vector Bases	342
7.5.2	Additive Curl-Conforming Vector Bases	344
7.6	Singular Hierarchical Meixner Basis Sets	345
7.6.1	The Singularity Coefficients	345
7.6.2	Auxiliary Functions	345
7.6.3	Representation of Singular Fields	348
7.6.4	Singular Scalar Bases	348
7.6.5	Singular Static Vector Bases	348
7.6.6	Singular Non-Static Vector Bases	350
7.6.7	Numerical Evaluation of the Radial Functions $R_n$ and $S_n$	351
7.6.8	Example: $p = 1.5$ Basis with One Singular Exponent	352
7.6.9	Example: $p = 2.5$ Basis with Two Singular Exponents	353
7.7	Numerical Results	353
7.8	Numerical Results for Inhomogeneous Waveguiding Structures Containing Corners	370

xii Contents

7.9 Numerical Results for Thin Metallic Plates with Knife-Edge Singularities	375
7.10 Conclusion	378
