Contents

I Theory of Signal Processing **1**

1 INTRODUCTION TO BIOMEDICAL SIGNALS **3**
1.1 NOISY SIGNALS 4
1.1.1 Introduction to random processes 4
1.1.2 Model of noisy signal 11
1.1.3 The signal to noise ratio (SNR) 12
1.2 FILTERING NOISY SIGNALS 13
1.2.1 Standard methods 13
1.2.2 Advanced techniques 15

2 DISCRETE SIGNAL PROCESSING **21**
2.1 DISCRETE SIGNALS 21
2.2 DISCRETE FOURIER TRANSFORM 22
2.2.1 Poisson Summation Formula 22
2.2.2 DFT 23
2.3 DISCRETE LINEAR TIME INVARIANT SYSTEMS . . 27
2.4 IMPULSE RESPONSE 27
2.5 Z TRANSFORM 27
2.5.1 Properties of Z transform 28
2.5.2 Z transform of the step 29
2.6 INVERSE OF Z TRANSFORM 29
2.7 NUMERICAL SIMULATION 30
2.8 NUMERICAL FILTERS 33
2.8.1 Implementation of numerical filters 34
2.8.2 Design of digital filters 40
2.8.3 Approximation of dynamical systems 50

3 SPECTRAL DENSITY ESTIMATION **53**
3.1 NON-PARAMETRIC METHODS FOR PSD ESTIMATION 53
3.1.1 Spectral density of WSS processes 54
3.1.2 Numerical techniques for spectral analysis 56
3.1.3 Mutual densities and coherence 69

3.2 PARAMETRIC ESTIMATION OF THE PSD 71
3.2.1 Linear prediction 73
3.2.2 Regressive models 75
3.2.3 Applications and generalizations 78

4 TIME FREQUENCY REPRESENTATIONS 83
4.1 LINEAR TIME FREQUENCY REPRESENTATIONS . . 83
4.1.1 The Short Time Fourier Transform (STFT) . . . 83
4.1.2 Wavelet Transform (WT) 88
4.2 QUADRATIC TIME FREQUENCY REPRESENTATIONS 97
4.2.1 Properties 97
4.2.2 Quadratic TFR derived from linear TFR 99
4.2.3 E and C domains: Wigner-Ville Transform and Ambiguity Function 99
4.2.4 Cohen's class TFR and Choi-Williams kernel . . . 104
4.2.5 Cross time frequency representations 109

5 NONLINEAR ANALYSIS OF TIME SERIES 115
5.1 RANDOMNESS AND CHAOS 115
5.1.1 Examples of dynamical systems 118
5.1.2 Fractal Dimension 119
5.1.3 Self-similarity, Hurst Exponent and fractional Brownian motion 122
5.2 NONLINEAR ANALYSIS OF TIME SERIES 123
5.2.1 Time series embedding 125
5.2.2 Testing with Surrogate Data 127
5.3 INDICES OF COMPLEXITY 131
5.3.1 Box counting estimation of fractal dimension . . . 131
5.3.2 Lyapunov exponent 131
5.3.3 Recurrence Plots 133
5.3.4 Entropy estimation 136

6 STATISTICS 141
6.1 DESCRIPTIVE STATISTICS 141
6.2 STATISTICAL INFERENCE 143
6.2.1 Important distributions 144
6.2.2 Parameter estimation 145
6.2.3 Confidence intervals 146
6.2.4 Test of hypotheses 152
6.2.5 Analysis of variance 153
6.3 ESTIMATION OF THE PROBABILITY DENSITY FUNCTION 159
6.3.1 Parametric methods 159
6.3.2 Non-parametric methods: unknown PDF distribution 161

6.4 GOODNESS OF FIT 161
6.5 REGRESSION 163

II Applications to biomedical signals 165

7 NON-INVASIVE BIOMEDICAL MEASUREMENTS 167
7.1 ACQUISITION OF BIOELECTRIC SIGNALS 167
7.1.1 Electrodes 168
7.1.2 Amplification 170
7.2 NEAR INFRARED TECHNOLOGY 174
7.2.1 Introduction 174
7.2.2 The law of Lambert-Beer 174
7.3 ULTRASOUND TECHNOLOGY 177
7.3.1 Introduction to ultrasounds 177
7.3.2 Doppler ultrasound 181
7.3.3 Sound Propagation 184

8 BIOELECTRIC SIGNALS 189
8.1 THE BRAIN AND EEG 189
8.1.1 Anatomy and Physiology of the Central Nervous System 189
8.1.2 The cells of the nervous system 189
8.1.3 Brain anatomy 192
8.1.4 Functional properties of cortical columns 196
8.1.5 Functional areas of the cerebral cortex 197
8.1.6 Electrical activity of the cerebral cortex 198
8.1.7 Connections of the cerebral cortex 203
8.1.8 The peripheral nervous system 205
8.2 THE MUSCLES AND EMG 207
8.2.1 Striated Muscles 207
8.2.2 The electrical command of muscle contraction and electromyography 211
8.2.3 Indexes extracted from surface EMG 211
8.3 THE HEART AND ECG 215
8.3.1 Introduction to the anatomy and physiology of the heart 215
8.3.2 Origin and interpretation of the electrocardiogram 216

9 CARDIOVASCULAR SYSTEM 219
9.1 ANATOMY AND PHYSIOLOGY 219
9.2 CARDIOVASCULAR AND RESPIRATORY CONTROL 223
9.3 THE CEREBROVASCULAR SYSTEM 226
9.3.1 The cerebral autoregulation 226
9.3.2 The blood-brain barrier 230

9.4 EXAMPLES OF APPLICATIONS 230
9.4.1 Multiple data: RR, pressure and respiration 231
9.4.2 NIRS data 232
9.4.3 TCD data 234

10 BIOMEDICAL SIGNAL PROCESSING USING MATLAB 237
10.1 BASIC COMMANDS 237
10.2 SIGNAL PROCESSING TOOLBOX 240
10.2.1 Numerical filters 240
10.2.2 PSD estimation 244
10.3 TIME-FREQUENCY REPRESENTATION 246
10.4 STATISTICS 255
10.5 SIMULATION OF DYNAMICAL SYSTEMS 256
10.6 COMPLEXITY ANALYSIS 257
10.7 Final considerations 257

A Fourier transform 259

B Laplace transform 265
B.1 Bilateral Laplace transform 265
B.2 Unilateral Laplace transform 267
B.3 Bode diagram 268
