Barcelona, 30 September 2016
INSPIRE Conference

Outline

- Overview of Use Case 4 of the EULF Energy Pilot
- Role of INSPIRE
- Energy Efficiency driven retrofit planning
- Mapping energy consumption
- Urban context variables
- Feasibility index
- Energy saving scenarios
- Input data

Overview of the EULF Energy Pilot UC4

- Goal: To support policy makers to design and implement Energy Efficiency driven renovation plans of building stock at urban level.
- Description: Use of existing models, from bottom-up to top-down approach, for the estimation of energy needs at urban level, based on real energy consumption data of a sample of buildings:
 - for building stock renovation planning and prioritization of interventions, e.g. by class of buildings and/or geographical area of interventions (e.g. in areas having energy distribution networks or in historical centres);
 - to enable Public Authorities (e.g. Municipalities) to assess the energy saving potential related to the building stock and to local conditions (e.g. climate);
 - to allow reuse of scaling-up models (from building to urban level) in different climatic conditions and with different characteristics of the building stock.

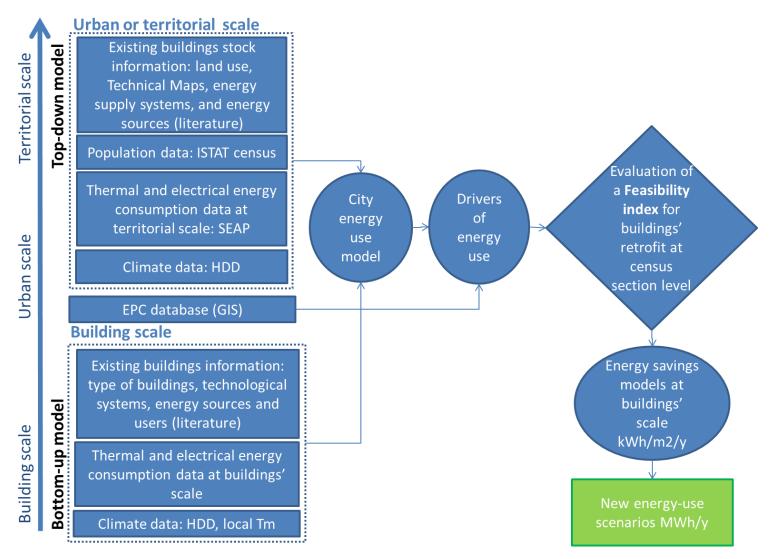

Role of INSPIRE

 Introduce INSPIRE into a methodology already applied to a test area (without INSPIRE), in order to facilitate the re-use of the methodology in other geographical contexts

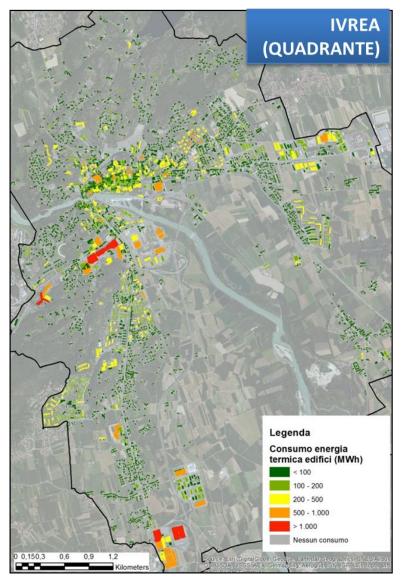

Energy Efficiency driven retrofit planning

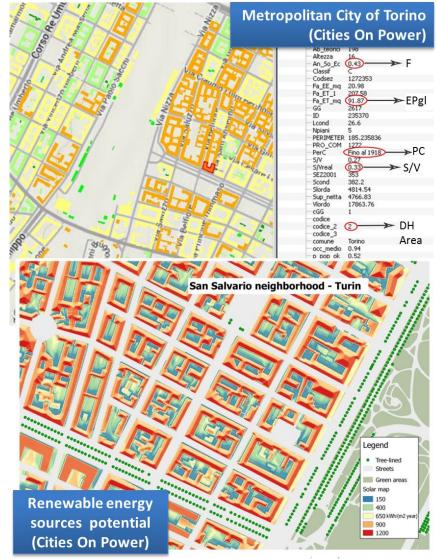

Mapping energy consumption

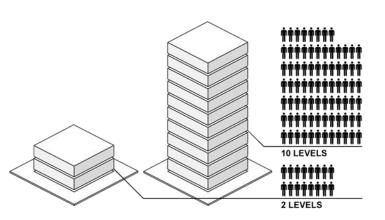

Urban context variables

 kWh/m^3 [CONTEXT] = f(BD, BCR, H/W, H/Havg, MOS, A)

BD – Building Density [m³/m²] BCR – Building Coverage Ratio [m²/m²]

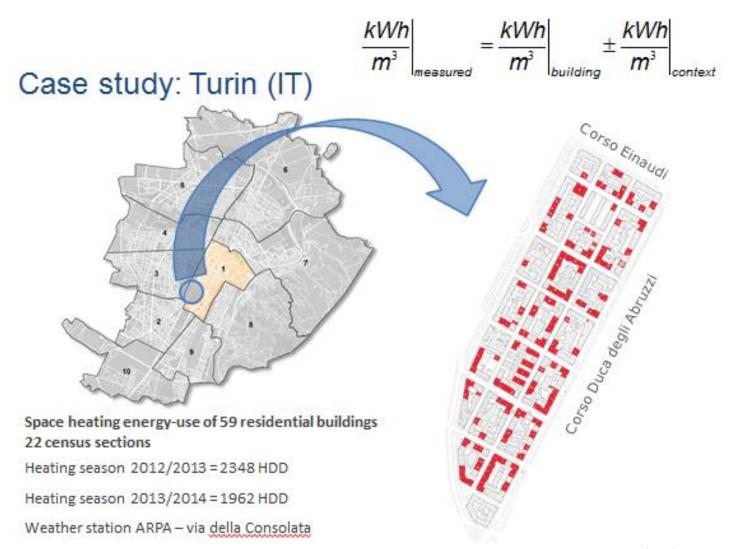

BD = BCR · Building Height

Mapping energy consumption

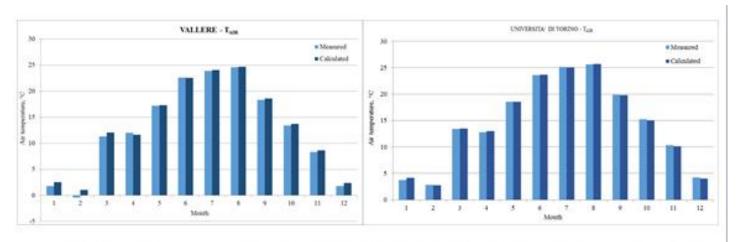

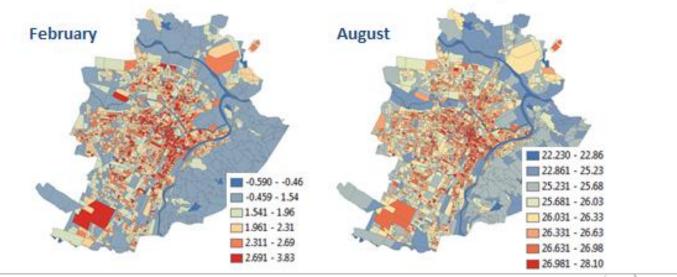

Mapping energy consumption

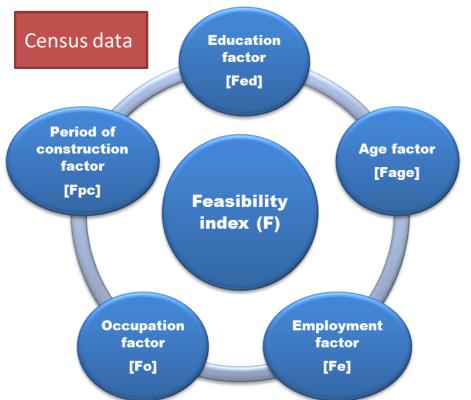

Feasibility index

Age factor:

active population (24-65) / total population Variables: ECONOMIC, DECISION, INTEREST

Education factor:

population with scholastic graduation / total population

Variables: AWARENESS

Employment factor:

employed people / total population
Variables: ECONOMIC, CREDIT ACCESS

Building's occupation factor: percentage of occupied buildings

Variables: DECISION, INTEREST

Period of construction factor:

buildings built before 1945

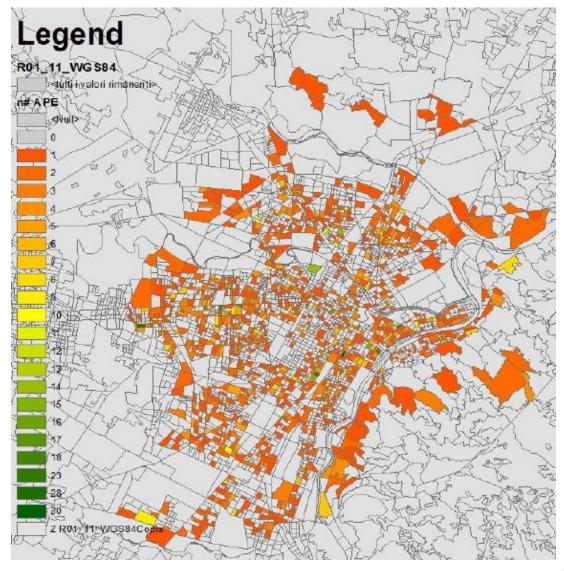

Variables: DECISION, INTEREST PROCESS

	First class	Second class	Third class	Fourth class
Feasibility index	<0.42	0.42 - 0.50	0.50 - 0.58	> 0.58
Number of buildings in the Metropolitan City of Torino	13%	42%	39%	6%
Number of buildings in Torino	20%	54%	23%	3%
Renovation level	windows	+ boiler	+ thermal insulation	+ thermal insulation
	substitution	substitution	of slab and roof	of facades

Feasibility index

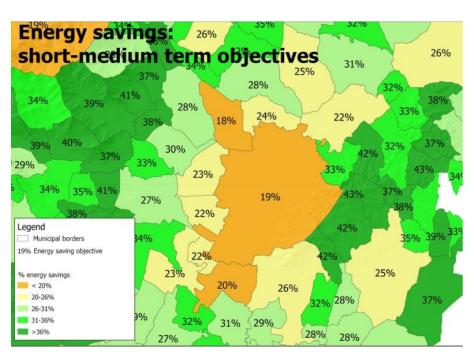

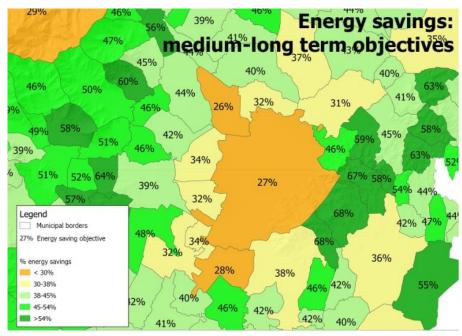

Energy savings scenarios

Input data

- energy consumption data at building level BU ext
- building characteristics
- energy networks
- land use
 LU, LC
- population distribution
- socio-economic variables
