Peer review Scholars has been invited to submit researches on theoretical and methodological aspects related to Smart Design, Planning and Technologies, and show realapplications and experiences carried out on this themes.Based on blind peer review, abstracts has been accepted, conditionally accepted, or rejected.Authors of accepted and conditionally accepted papershas been invited to submit full papers. These has beenagain peer-reviewed and selected for the oral session and publication, or only for the publication in the conference proceedings.

Conference report 300 abstracts and 650 authors from 36 countries:

Albania, Australia, Benin, Belgium, Bosnia and Herzegovina, Brasil, Bulgaria, California, Chile, China, Cipro, Cuba, Egypt, France, Germany, Italy, Japan, Jordan, Kosovo, Malta, Massachusetts, Michigan, Montserrat, New Jersey, New York, New Zealand, Poland, Portugal, Russia, Slovakia, Spain, Switzerland, Texas, Tunisia, Turkey, United Kingdom.

160 papers published after double blind review by the International Scientific Committee

Preface In the present era, technologies are becoming increasingly important in helping and supporting man in research, knowledge and production activities, almost as if they were smart prostheses. With the theme of the XVI Forum "World Heritage and Knowledge", I propose to the International Scientific Community to debate and establish a comparison of knowledge carriers to communicate methodologies of good practices adopted and experiences in the use in the protection, conservation and safeguarding of cultural heritage and landscape as well as in the design of the "new, "that, adopting in the building processes and building construction Innovative Building Modelling, can realise a non-contemporaneity of what has the same date (Giulio Carlo Argan) respectful of the values of the pre-existing, legitimate because it participated ex ante and monitored becoming all its ethical, aesthetic and performance connotations.

> With the Internet of things, for example, sensors that are used to produce data autonomously that widen the processes of knowledge on all levels, from the territory with its infrastructures, to the environment, to the artefacts entering into the body itself of their physicality, or, in the case of the new, building the project as a prediction throughout physical consistency.

> Nevertheless, the use of new technologies allows for economies of scale, both temporal and economical, not only for the surveying and representation of the built and the territory in the analysis phase but above all for the management of the resulting data that makes the design activity of the restoration of the historical heritage and land-scape or of the newly constructed in a single process no longer divided into steps but also unitary in concrete constructions and the realisation of the works, in the intermediate checks, in the testing, in the monitoring and in the programmed maintenance.

In conclusion, it is indispensable for the scientific community to highlight how technologies, without a responsible attitude that commit man's choices and knowledge in dealing with and planning appropriate responses to the issues and needs of the collective, can create a deception that unfortunately materialises with the subtle persuasion of uncontrolled astonishment that overwhelms the imagination.

Metric survey and possible representations of Historic Architectural Heritage: the case of the Santa Giustina Abbey

Alessandro PIOVANO¹, Fulvio RINAUDO¹, Roberta SPALLONE¹

⁽¹⁾ Department of Architecture and Design, Politecnico di Torino, Turin, Italy E-mail s232365@studenti.polito.it,fulvio.rinaudo@polito.it,roberta.spallone@polito.it

Abstract

The semi-automatic metric survey techniques developed in the past years allow the recording of 3D models with an ever-increasing level of details and accuracies.

The 3D database, usually georeferenced in a cartographic system, opens the floor to different kind of representations (e.g. 2D drawings, 3D models, digital animations, AR/MR applications etc.) conceived to satisfy different requirements at different graphic scales and aimed to increasing the knowledge of Cultural Heritage.

The paper introduces some different representations that can be extracted from a 3D database: the "as built" representations, which put in evidence all the irregularities of a real building, as it today appears because of anthropic interventions and endogenous/exogenous events happened during its life.

Starting from this 3D database the main task of the representations is interpreting and synthesizing the collected information aiming to recognize the architectural values of the building, the geometric matrices of the shape, the modularity of the composition, and the relationships between architecture and decoration.

The Romanesque abbey of Santa Giustina in Sezzadio (Italy), a well preserved building, which considerable dimensions, constructive accuracy, and rich decorations testifying its territorial importance, is a significant case study for these purposes. It is a less documented architecture where metric survey and representations has been produced as a first step to support future researches.

Keywords: metric survey, architectural drawing, 3D modeling, graphical analysis, Santa Giustina Abbey

1. Introduction

The documentation of Cultural Heritage assets is one of the most intriguing and urgent needs to preserve cultural values of local and global communities. The starting points of every documentation effort are the historical evolution of the analyzed asset and the geometric knowledge of the full and empty spaces, which define the object to be documented.

The present work concentrates its attention on geometric knowledge acquisition that requires a strong metric survey and a careful set of representations able to put in evidence specific portions of the object and their spatial relationships. Both metric survey and representation cannot be developed properly without a basic historic knowledge able to inform the surveyors about the aims of the survey itself.

3D models generated by metric surveys and *ad hoc* representations of it will be the geometric framework where all the historical data could be connected by forming a database useful to transfer the basic knowledge for further analysis, restoration and conservation planning, and valorization actions.

The experience developed on the Santa Giustina Abbey represents a full example of a balanced cooperation between experts in metric survey and experts in representation to realize and communicate the achieved results.

2. Metric survey

In the last decades, many technological improvements allow the growing up of a new way to develop a metric survey from the primary data acquisition up to the management of them to obtain a 3D model, which represents the normal outcome of a metric survey intervention. 3D models generated by means of correct metric survey approach are the base for the development of different kind of representations that range from traditional 2D drawings up to BIM structures, AR/VR solutions, 3D print, etc. [1].

Despite the fact that up to twenty years ago the selection of the points necessary to start the modelling phases was performed directly by the surveyors, today the intelligence of the survey is applied on a point cloud acquired automatically by using laser scanning instruments or, more recently, by automatic digital photogrammetric methods.

The evolution of technologies and the changes in the modeling do not allow to change the correct design, execution and check of the metric survey procedure.

2.1 Design of a metric survey

The correct approach to design a metric survey can be split into four main preliminary steps. The first thing to be done is the comprehension of the goals of the metric survey by fixing the required accuracy, the deliverables to be produced and the goals that the 3D model has to satisfy. The accuracy (the maximum acceptable metric differences between the final 3D model and the real surveyed object) can assume different values for specific detail or portion of the entire object in order to minimize the costs of the survey and to give, to the final users, the needed information. The deliverables required at the end of the metric survey are of interest because they help to define the level of detail of the survey and, finally, the amount of the necessary primary data [2].

A second step of the planning of a metric survey is the recovering of already existing metric data: in case some existing data are accessible, they have to be tested in terms of accuracy and level of detail limits defined in the first step. Usually historical metric data are not completely documented and therefore not completely usable but, in any case, they could form a good base to plan the actions and to show the modification that occurred on the object over the times.

By considering the requirements and the already existing and acceptable data, it is possible to define the amount of points, which have to be acquired, and their location. That information are of fundamental importance during the selection of the usable metric survey techniques.

The fourth and last step is the selection of the techniques to be used in all the different phases of the metric survey: control network establishment, and detail survey. The use of some of the possible metric survey techniques requires, sometimes, also the establishment of a second order control network: in these cases, also this step must be carefully planned.

2.2 Detail metric survey techniques and strategies

The technology development occurred in the last years caused the almost disappearing of traditional metric survey techniques based on manual distance measurements and the traditional topographic methods using total stations, and also the use of photogrammetry based on stereoscopic plotting. All these three methods ask for the selection of the points to be measured by a skilled operator: the amount of recorded data are reduced to a minimum size and the modelling is done, step-by-step, by the surveyor itself during the point survey.

The introduction on the market of laser scanner devices, push the normal approach of the detail survey towards an automatic (and therefore not intelligent) acquisition of a big amount of points irregularly distributed (the point clouds). The main reason who justify this result is the possibility to generate a big amount of geometric analysis when they are necessary (not during the acquisition period), and to reduce the time needed to acquire the primary data.

Actually, this advantage was true for photogrammetry also since its beginning: the images and some metric information (such as for example a network of Ground Control Points or some distances) constitute the implicit 3D model to be investigated when necessary also years after the acquisition of those primary data. In the same way the point clouds acquired by Laser Scanning Systems form a stable set of metric information that can be used for geometric modelling when necessary and stored for successive uses. The automatic procedure used to generate those point clouds guarantees the objectivity of the primary data (as the images used in photogrammetric surveys) for a subjective interpretation developable in a second step.

The research developed in the last years, shows that a strong integration between Laser Scanning Systems and Photogrammetry can give the best solution: the images acquired by the most recent Laser Scanning instruments allow coloring the point clouds and increase the quality of the interpretation required during the modeling phase.

Point clouds are not 3D models because the points are not topologically connected: points are independent geometric entities and the metric survey cannot be considered totally developed until a real 3D model with defined topological relationships (e.g. line, surface and volume definitions) is built.

The simple use of mesh solutions (e.g. Delaunay triangulation) could be a possible answer for very irregular surfaces where sharp edges are not present, but especially in architectural objects, this approach do not give appreciable results. Geometric break-lines have to be detected to drive the mesh algorithms towards a correct description of the shape of the object. Today no automatic tools can give those results and a huge work of geometric segmentation has to be performed manually by using specific software platforms.

To realization of traditional 2D drawings (e.g. planes, sections, and elevations) is done by cutting the point clouds with the selected section plane, and the point nearest to this plane inside a specific tolerance, are projected onto it and then topologically connected to define the intersection line: this draft line constitute the starting point for the 2D representation.

Recent developments in automatic digital photogrammetry allow generating dense point clouds similar to the ones acquired by using Laser Scanning devices allowing to skip the heavy manual plotting by using stereoscopic vision and to produce an intermediate primary dataset of points starting from the acquired images.

In case of terrestrial applications, the use of drones to acquire stereoscopic images allow today to solve the problem of surveying vertical surfaces facing narrow streets, roofs of buildings, sub-horizontal assets like archaeological excavation sites, etc. The acquired images are used by means of standard photogrammetric tools to complete the point cloud generation.

The density of the point clouds could be different in some part of the surveyed volume due to different requirement for correct representations: the surveyor has to be aware of these requirements in order to be able to realize a 3D model useful for the specific representations defined with the final user.

2.3 Metric survey of the Santa Giustina Abbey

The aim of the metric survey of the Santa Giustina Abbey is to support historical studies and to constitute the metric base for a documentation of the complex. A survey scale of 1:100 was adopted and traditional 2D drawings (e.g. plans, sections and elevations) were chosen as a first way to represent the achieved results.

The Abbey of Santa Giustina has not be documented in acceptable ways during the past. Only one survey made in 2001 during the structural restoration could be partially recovered but the level of detail is not considered sufficient for the aims of the new investigation: in addition, there is not access to the primary data therefore is not possible to certify the metric quality of the recovered drawing. It was decided to use those drawings to describe the interior roof structures and those parts that are not of main interest for the investigations.

The level of detail required to form a metric base for geometric analysis and wall analysis that the researchers would performed, suggest adopting the Terrestrial Laser Scanning technology for interior and exterior walls, and the aerial photogrammetry for the exterior surfaces of the roofs by using a UAV. These aircraft allow the acquisition of the needed images at the sufficient distance to reach the accuracy required by the adopted scale (e.g. tolerance of ± 2 cm).

Fig. 1 – The control network (left) and the Laser Scanner station points (right)

A control network has been established (see Fig. 1) and the survey has been performed by using the scheme of a free network: planimetric measurements have been done by using a total station and levelling by using the differential levelling technique.

Fig. 2 – The FARO FOCUS3D X330 used for the point cloud acquisition and a marker (left) and Marker used for GCPs materialization and the MAVIC PRO UAV system used to acquire aerial images (right)

A second order control network has been realized to allow the registration of the point clouds and to estimate the exterior orientation parameters of the stereoscopic images. The Ground Control Points (GCPs) for the registration of the point clouds have been materialized by traditional signals (see Fig. 2): a total amount of 169 points have been surveyed, by using a total station, in order to allow the registration of the indoor and outdoor point clouds. Almost half of them are used to check the obtained accuracy to certify the metric quality of the final model.

All the scans obtained by using Terrestrial Laser Scanners and automatic matching of acquired images have been oriented in the coordinate system defined by the control network. The mean discrepancies on GCPs used to orient the terrestrial point clouds are less than 1.5 cm and the observed discrepancies of the GCPs used to orient the images acquired by the UAV system (see Fig. 3) are less than 1 cm. The discrepancies on the Check Points not used during the orientation steps are less than 2 cm.

Both these results allow certifying that the final point cloud used to extract 3D metric information have the necessary metric quality defined during the design of the metric survey.

Once the point clouds have been registered, the basic metric information have been extracted to generate the required representations.

The strategy in these cases is to cut the point clouds by considering all the points present inside a volume having a thickness of about two times the required accuracy. All the points contained in this volume are than projected on the needed projection plan and topologically connected to for the draft line that define the required section (see Fig. 4) or elevation.

Fig. 3 - One of the aerial images used (left) and the obtained point cloud for roof metric survey (right)

3. Issues of interpretation and representation of the data

The interpretation of the acquired metric data implies a constant and rigorous attention to the formal, structural, and stylistic peculiarities of the building, to the historical period in which it was realized, also in reference to coeval buildings and to the context in which it rises, to the constructive materials used, and to transformations and events happened over time. Documentary materials, archival, bibliographic and iconographic sources contribute in a fundamental way to this knowledge.

Therefore, the architectural survey arises as an open system of knowledge whose documentation is aimed at safeguarding the cultural heritage [5].

The aims of the survey, to be established in the design phase of knowledge operations, guide at all times the representation methods and the contents that they must highlight.

The representation is established as a tool for the synthesis of the acquired knowledge, making a critical selection directed by the pre-established aims.

Fig. 4 – Elevation (left) and section vector-based extraction (right – Top: point cloud – Middle: section line – Bottom: complete section vector-dataset)

The digital revolution has led to an extensive availability of tools: for architectural representation - through drawing, modeling, animation, up to prototyping -; for communication - through virtual visits, interactive explorations, AR, VR, MR -; and for sharing - through websites and open-source platforms-.

3.1 The educational value of the work on Santa Giustina Abbey

The Abbey complex of Santa Giustina in Sezzadio, founded in 1030 by Marquis Otberto and soon the seat of the Benedictine order, has as a fulcrum the church subject of the present study [6], which closes the perimeter of the northern cloister.

The building, described by Porter in 1917 [7] as a minor edifice of the Northern Italy, has considerable dimensions (max length of about 39 m, max width of about 27 m, max height of about 22 m) which testify its relevance in the territory.

It is a Romanesque church, masonry bricks built, having a *crux commissa* plan with three naves delimited by three apses beyond the transept. The crypt occupies the space below the presbytery which is consequently raised. The salient façade is broken in the central part by a watching tower built somewhat earlier than the construction of the Gothic rib vaults on the three naves in the fifteen century [7].

The recognition of the importance of the Abbey led to the hypothesis that there could exist design criteria of a modular nature at the base of the planimetric tracing and, in general, of the spatial concept

of the project. These practices, identified in Cistercian buildings of the twelfth and thirteenth centuries [8], together with the knowledge of geometry in Gothic architectural works, documented in the book by Villard de Honnecourt [9], but also found in previous solutions [10], would have in the Abbey in Sezzadio a really early application.

Fig. 5: Plans, elevations, section of Santa Giustina Abbey. Original scale 1:100. Drawing by Alessandro Piovano.

Moreover, the absence of updated representations metrically based on acquisitions realized with the most recent technologies and represented through digital tools, led to the choice to draw up those synthesis drawings essential for an exhaustive description of the object, which also constitute the basis for graphic hypotheses on modularity.

The selection of the cut planes and the reference planes of the point cloud to generate the most significant sections is an operation that is conceptually very complex and didactically particularly educational.

In fact, this selection forces the student to move the section plane parallel to itself in the different levels of the building, in order to intersect the most significant elements, such as keystones, as was done in the case of the present work, for the longitudinal section of the crypt and the central nave.

Similarly, the horizontal section that gives rise to the main plan had to be set at an unconventional height in order to pass on the presbytery floor and intersect the largest possible number of openings at the entrance level.

In addition, the selection of the reference plane in relation to the section plane, which allows visualizing the elevation beyond the section plane, completing the orthographic projection, involves some problems: indeed, when between the two planes many elements are interposed, the reading of the elements on the posterior plane can be difficult.

The passage from the raster image obtained from the point cloud to the vector drawing generates further issues. The selection of the points through which the break-line must pass has to take into account those punctual elements (cracks, thickening of plasters, tie beams) for which the section plane could accidentally pass that could compromise the understanding of the conformation of the artefact (see Fig. 5).

Fig. 6: Graphical analysis of Santa Giustina Abbey. Original scale 1:100. Drawing by Alessandro Piovano.

Vice versa, the points intended as projection of geometrically significant elements: edges, intersections between surfaces, imposts and keystones, must necessarily be taken into account. In addition, the scale of representation designed for the drawing and the printing suggests the minimum distance for the selection of points, to avoid increasing of time during the work.

The potentiality of printing devices for digital drawings has progressively led to the creation of more detailed drawings than analogical ones, both in the design drawing and in the survey drawing. The relationship between scale of reduction and contents, established by centuries of pen representations on paper and by a series of indications by the standardization bodies (UNI, ISO, EU, CEN4) [11], today sees a search for the detail superior to the past.

At present, distances between parallel lines even below the millimeter are appreciable, and in the 1: 100 scale established for the restitution of the Abbey, they are equivalent to 10 or less centimeters measured.

Then, the problem is of a cultural nature, and respecting the criterion of the minimum distance between two lines is not sufficient: for instance, the identification of the main partitions of an architectural order can lead us to decide to draw a line rather than another, in order to communicate a univocal message to the reader of the drawing.

In the examined case study, it was decided to add the geometric information with the architectural ones, such as the virtual projections on the plans' section planes of the vaulted and roof systems.

Furthermore, it has been established to represent elements of recognizable particular value, such as the mosaic flooring of the crypt and to highlight, using a symbolic hatch, the tiles and the visible brick textures in the internal and external façades. The decorations characterized by chromatic variations that do not involve geometric discontinuities have not been taken into consideration: such as the alternating bands, painted in black and white on the pillars and the apparatus of the frescoes, already effectively documented in the point cloud.

Finally, on the synthesis drawings realized with such attentions it has been possible to propose modular readings that refer to the well-established methodology of the graphical analysis [12] [13].

Graphical analysis, in the field of the project's reconstruction, could be recognized as a privileged instrument of architectural criticism because it provides new contributions of knowledge in respect to the only original drawings, the old pictures, the project reports and the critical essays. Graphical analysis, with a translation of practices and meanings, can be fruitfully applied also to the survey drawings. Indeed, in the present case study, it contributes to highlight the figurative reasons of architectures' visible conformation, affirming its heuristic value.

In the abbey, the recurrence of proportional ratios of areal type (square, semi-square) and linear type (M, 1/2 M), that is more convincing in the analysis of the plans and main elevation, seems to rule the whole composition. These relationships also highlight a plausible correspondence with the unit of measurement probably used, the Roman foot (see Fig. 6).

3.2 Beyond the didactic experience: from a point cloud to several possible representations

As mentioned, the availability of the database generated by terrestrial and aerial scans can be the basis for generating multiple types of digital models and drawings, obviously paying attention to the reduction scales provided in the survey project.

Digital geometric models represent a relatively new product, compared to traditional analog representations by orthographic projections. Agreeing with Bertocci and Bini, this model is the product of a synthesis operation performed by the operator who, pursuing a specific communication objective, selects the information of what "is nothing other than a geometric figure representing an architecture" [14].

A particular category of modeling tools that can be used in the survey representation is that of parametric modeling, distinguished in geometric and BIM tools.

The first, by means of form-making strategies seems to be a suitable solution for the studies conducted on existing historical architectures [15] [16]. Anyway, the procedure, that is not comparable to a graphic reproduction gesture but to a real research activity, required the construction of a precise methodology that frames explicit correlations between shapes of an artefact, their geometric properties and the conditions bringing to its formation [17].

The second applied to the historical architecture (HBIM) allow, among other prerogatives, to build families of architectural elements to draw from during the modeling phases and, above all, to manage a series of information associated with the model, aimed at stratigraphic analysis, restoration, static consolidation, energy qualification, management, allowing to record changes that occur over time [18].

Starting from digital models different products can be created, such as animations and scaled physical models make through 3D printers. These products can be a link between representation and communication, triggering processes of perceptive fruition and facilitating the three-dimensional understanding of the artifact by an inexperienced public.

Further steps in this direction, aimed at valorization through the promotion of cultural tourism, can be accomplished by creating virtual visits, interactive explorations, experiences of virtual reality, augmented reality, mixed reality, available *in situ* or shared through websites and open-source platforms.

4. Conclusion

The presented experience is a fluid process within which different knowledges are composed in a multi-disciplinary perspective aimed at the analysis, interpretation and enhancement of Cultural Heritage. The realized database and the first graphic elaborations resulting from its interpretation offer an important contribution to further research involving the disciplines that operate in the field of the

safeguard and enhancement of historical architectures of recognized value, not yet adequately documented.

Table of content

P 12 Preface Carmine GAMBARDELLA

13 ID 004

Drawings and Paradoxes: The Image and the Three Fictional Dimensions of Architecture Pedro António JANEIRO

19 ID 006

Reconstruction, Addition, Grafting, Overlapping and Subtraction. Five Approaches to Intervention in Historic Contexts Antonello MONACO

23 ID 009

The knowledge as an instrument for recovery and valorize the rural architecture in Sicily Andrea D' Amore

34 ID 011

An evaluation on how to implement the Historic Urban Landscape (HUL) approach in a critical case study: the city of Valparaíso, Chile Andrea ORTEGA

43 ID 012

From recovery manuals to historic and construction BUILDING INFORMA-TION MODELLING (H-BIM). Strategies for historical sicilian centres Tiziana CAMPISI, Daniela SIDELI

53 ID 013

SWOT analysis for the redesign of historic university building stock Simone LUCENTI

62 ID 014

Metric survey and possible representations of Historic Architectural Heritage: the case of the Santa Giustina Abbey Alessandro PIOVANO, Fulvio RINAUDO, Roberta SPALLONE

71 ID 017

Research and design in the area of Early Christian basilicas in Cimitile Pasquale MIANO

81 ID 018

The landscape as a testimony, or a resource for the future? Nadia FABRIS

87 ID 019

The newly founded centers in the Agro Pontino: from the local to the global, from the past to the contemporary, to the future Alberto BUDONI, Maria MARTONE

97 ID 020

Conversions and Resilient Materials Emanuele Walter ANGELICO

Analysis of Masonry Ancient Neapolitan Helical Staircases Francesco FABBROCINO

112 ID 022

Recomposition of architecture in the historical city. The San Bernardino area in Padua, Italy Enrico PIETROGRANDE, Alessandro DALLA CANEVA

122 ID 023

Facades of Krakow's townhouses from the turn of the 19th and 20th century – protection and restoration Beata MAKOWSKA

131 ID 024

Sustainable rehabilitation and reconversion of Palácio da Rosa (Lisbon) in a dance school Sara CARVALHO, António LEITE, Jorge RIBEIRO

141 ID 025

Change of urban landscape in correlation with archaeological heritage in contemporary Serbia and knowledge Natasa ZIVALJEVIC-LUXOR, Nadja KURTOVIC-FOLIC, Hartmut PASTER-NAK

153 ID 026

The recovery of illegal settlements: a case study Claudia de BIASE

162 ID 027

Piazza Medaglie d'Oro and the Vomero hill in the Società pel Risanamento's projects in Naples. 1885-1964 Elena MANZO

172 ID 028

The cycle highway RS1 in Essen: a model of green-oriented mobility to promote urban history Ilaria PONTILLO

177 ID 031

A place for technology transfer and digital techniques applications for survey and representation: the ancient fort of Nagaur in Rajasthan, India Minakshi JAIN, Pietro MASSAI, Luca ROSSATO

187 ID 032

The Chinese house inside the ex-foreign concession in Hankou: description of Lifen

Francesco MAGLIOCCOLA

197 ID 033

Literature as a representation of changes in urban landscapes after 1945 (on Polish, Czech and Slovak examples) Joanna CZAPLIŃSKA

App and Go Edutainment for Micro_Cities on the Sicilian Ionian Coast Marinella ARENA

212 ID 037

Traditional Knowledge of Disaster-Resilient Design in World Cultural Heritage, Japan - For Consisting Cultural Conservation and Disaster Mitigation -Takeyuki OKUBO

220 ID 039

Geo-climatic applicability of sunspaces in European climates including resilience to climate changes Giacomo CHIESA

229 ID 040

Design of indoor climate-control passive systems in buildings: experiences for a PhD course

Giacomo CHIESA, Mario GROSSO, Mehrnoosh AHMADI, Matteo BO, Giovanni MURANO, Marianna NIGRA, Elisa PRIMO

239 ID 041

The Sanctuary of Castel Petroso: reflections on architectural representation Piero BARLOZZINI, Fabio LANFRANCHI

247 ID 042

Abandoned Railways and Cultural Heritage. Networks for spread regeneration

Francesca CASTAGNETO, Stefania DE MEDICI

257 ID 044

Innovative instruments of territorial environmental management: the need for a regulatory approach Michele RUSSO

263 ID 045

The Redesign of Boundary between River and Ground. A Technological-Environmental Approach for the Resilience of River Corridors and Health of Inhabitants Michele DI SIVO, Filippo ANGELUCCI, Cristiana CELLUCCI, Daniela LA-DIANA

272 ID 046

To save from oblivion and destruction. A historical-juridical perspective on the cultural heritage's protection Maria NATALE

280 ID 047

Structural morphology of the oldest Church in Capocastello (AV) Ingrid TITOMANLIO

Seismic safety evaluation and push over analysis of the oldest church in Capocastello (AV) Ingrid TITOMANLIO, Giuseppe FAELLA, Vito IANNACCONE

297 ID 049

Ancient roads of Southern Etruria: historical evolution and digital investigation

Michele MAGAZZU'

304 ID 050

PCM in the energy redevelopment of social housing Frida BAZZOCCHI, Vincenzo DI NASO, Ilaria TORTORELLA

314 ID 051

The Visibility of the Monumental Heritage and the Network Society Matteo Giuseppe ROMANATO

323 ID 052

Ziride and Hammadite palatial architecture and its influence on Norman architecture in Sicily Lamia HADDA

333 ID 054

A spatial multi-criteria analysis model to identify intervention strategies for the recovery of abandoned olive groves. The case study of Lucca Hills Simona BONELLI, Massimo ROVAI, Maria ANDREOLI

343 ID 055

Landscape redevelopment as a tool for the enhancement of rural areas. A project proposal for the case study area of Padule di Bientina (Lucca – Italy) Silvia MICHELOTTI, Massimo ROVAI, Maria ANDREOLI

353 ID 056

The reconstruction of an Image. The experiences of Quaroni and Piacentini in Basilicata

Antonio BIXIO, Giuseppe DAMONE, Enza TOLLA

361 ID 057

The aggregation of the building elements in horizontal structures Francesco Pio ARCELLA

368 ID 058

New trends in local government policies: between the need for reducing land consumption and participatory urban regeneration models Marco CALABRO'

The main pillars reconstruction of the Basilica di Collemaggio Alberto FRANCHI, Pietro CRESPI, Marco ZUCCA, Nicola GIORDANO, Nicola LONGARINI

383 ID 060

The Promotion of the cultural heritage: brand new challenge, same old problems

Antonio LIGUORI

389 ID 061

The earthen architecture culture and Campidanese house. Strategies for recovery and enhancement of the Quartu Sant'Elena's Old Town Centre Alessandra PUSCEDDU, Mario CERASOLI

399 ID 062

Sicilian rural borghi, urban and architectural entities between concreteness and immateriality

Alberto GNAVI, Silvia Maria RIPA

409 ID 064

The built heritage copied and replicated. Reproduction processes of the urban heritage: transcription, restitution and displacement Giuliana QUATTRONE

417 ID 065

The built heritage copied and replicated. Reproduction processes of the urban heritage: transcription, restitution and displacement José Miguel SILVA

427 ID 068

The role of Italian cultural heritage in sustainable urban regeneration. New references from four case studies Francesca ACCICA, Irene POLI, Chiara RAVAGNAN, Francesca ROSSI

436 ID 069

Smart Heritage Strategy: a new intelligence for resilient historical centers Chiara AMATO, Giulia BEVILACQUA, Silvia URAS

446 ID 070

An inclusive approach to Digital Heritage for knowledge and conservation of European assets: the INCEPTION project Federica MAIETTI, Federico FERRARI, Marco MEDICI

456 ID 071

"The commercial relations between Great Britain and the Kingdom of the Two Sicilies in the XIX Century" Vincenzo PINTAUDI

"The Value of Social Media for Reconstructing Lost Heritage in the British Overseas Territory of Montserrat, Site of an Ongoing Volcanic Crisis." Gracelyn CASSELL

477 ID 073

Architecturale experiences in the churches of the foundation centers of the "Opera Nazionale per i Combattenti" Riccardo SERRAGLIO

487 ID 074

Functional behaviours in the requalification of public residential buildings Carla CHIARANTONI

495 ID 076

Observing urban landscapes. View-points for the representation of contemporary city

Antonella SALUCCI, Niccolò SARDO, Marta MAGAGNINI

505 ID 077

The Design to valorise local tradition in exhibitions for future generation Laura GIRALDI, Isabella PATTI

512 ID 080

Made in stone Agnieszka KOSIK WOLNY

521 ID 083

Integrating governance of the National Reserve of Coyhaique, Chile, into regional sustainable development Theresa TRIBALDOS, Stephan RIST

529 ID 084

Increasing resilience of Cultural HeritageAssets: the "BIMtoBAcademy" project Marcello BALZANI, Fabiana RACO, Theo ZAFFAGNINI

535 ID 085

Enjoyment of the Cuban Contemporary Architectural Heritage: an innovative cultural visitor route to connect the UNESCO site of Old Havana to the National Schools of Art Cristina COSCIA, Rocco CURTO, Valeria GADALETA, Jorge PEÑA DÍAZ, Diana ROLANDO

545 ID 086

Applying Resilience Thinking for the Cultural Landscape of the inner areas: new tools of knowledge and adaptive management Maria Rita PINTO, Katia FABBRICATTI, Lucie BOISSENIN

The complex dialogue between contemporary language and preservation of the ruins in the restoration of Paul II's fortress at Cascia Stefano D'AVINO

563 ID 088

Landscape analysis of railway structures in heritage assessment: Bridges on the Victoria-Temuco railway line Ignacio BISBAL GRANDAL, Françoise Anais LOUBIÈS, Nicolás Andrés MORAGA HERRERA

573 ID 090

Architectural Representation: a Tool for Urban Regeneration The Colour Plan of Egadi Islands Angela Alessandra BADAMI

583 ID 091

From the traditional to the virtual museum: a strategic cultural, social, environmental and economic resource for Europe Cristiana CARLETTI

594 ID 092

Wedge-shaped bricks spires and domes. Construction and decorative aspects

Francesco DI PAOLA, Giovanni FATTA, Calogero VINCI

606 ID 093

Pottery from the south-west area of the Castle of the Monte in Montella: the decorative repertoire Iolanda DONNARUMMA, Gaetana LIUZZI

617 ID 097

Principles of cultural landscape Restoration Sara POURYOUSEFZADEH

626 ID 098

The representation of complex systems. New communication strategies Maria Elisabetta RUGGIERO

633 ID 100

How the historical heritage affects the urban flow of people? The case study of Lecco

Mattia ALBERGANTI, Chiara BONAITI

642 ID 101

The tomb of Henenu, Luxor, Egypt: underground surveying Ernesto ECHEVERRÍA, Flavio CELIS, Antonio MORALES, Fernando da CASA

The preservation of the architectural heritage of the twentieth century: the laminar structures of reinforced concrete Monica MARTINEZ, Ernesto ECHEVERRIA, Gonzalo GARCIA-ROSA-LES, Kevin MORENO

659 ID 104

Decline and Resilience of a Mediterranean City: the Case of Syracuse during Thirteenth Centuries Elina GUGLIUZZO

665 ID 105

The Sanctuary of Santa Maria delle Grazie at Fornò: studies for the restoration and seismic strengthening Alberto CUSTODI, Nicola SANTOPUOLI

675 ID 106

Urban design and sprawled archaeology. From the "ancient vs new" dichotomy to pre-existence as design material Raffaele SPERA

684 ID 107

Material and immaterial heritage as a strategic resource facing structural shifts: the case of the Fès-Meknès region (Morocco) Letizia DI PASQUALE, Maria Rita GISOTTI

694 ID 109

Derna: a gateway of Libya. The ethical value of identity and the vision for the birth of a new urbanity Calogero MONTALBANO

704 ID 110

"...But what use is this art history?" Anna MANDIA

709 ID 111

The representation for the use of hidden heritage: the case of Genoese artificial caves Massimo MALAGUGINI

719 ID 112

The color of the city. Restoration and conservation of the painted facades of Palazzo Boschetti-Dalanzo then Avagnina in Carrù Maria Paola MARABOTTO

728 ID 113

A Resilient Environmental and Social Design Strategy Francesca MUZZILLO, Fosca TORTORELLI

Natural disaster and environmental risks. Facts, needs and challenges in Italy Benedetto DE VIVO

738 ID 116

Ductility-based incremental analysis of masonry structures strengthened with composites

Giancarlo RAMAGLIA, Francesco FABBROCINO, Gian Piero LIGNOLA, Andrea PROTA, Gaetano MANFREDI

747 ID 117

The technology of reinforced concrete elements.Determination of project parameter: concrete cover Roberto CASTELLUCCIO, Maria INFANTE, Veronica VITIELLO

757 ID 118

The "Cartilla de mantenimiento" as a tool for the protection and maintenance of the earthen architectural heritage in Tunja, Colombia Elena ZANET, Francesca DE FILIPPI

767 ID 119

The Deception of Colour: Digital Reconstruction of finctae et pictae Architectures

Gabriella LIVA

776 ID 120

The role of overstrength in damage propagation and monitoring of architectural heritage Bernardino CHIAIA, Antonio VENTURA

783 ID 121

ICTs to train on World Heritage and Tourism: the case of "Tourism Management at UNESCO World Heritage Sites" MOOC Ilaria ROSANI, Silvia DE ASCANIIS, Maria GRAVARI-BARBAS, Lorenzo CANTONI

792 ID 122

Local identities & excellences. An industrial network to re-produce uniqueness through waste reutilization Elisabetta BENELLI, Laura GIRALDI, Francesca FILIPPI, Jurji FILIERI

799 ID 123

Sinkhole hazard in the metropolitan area of Naples, Italy Anna SCOTTO DI SANTOLO, Melania DE FALCO, Giovanni FORTE, Antonio SANTO

807 ID 124

A requalification project hypothesis for the Bagnoli/Agnano (Naples, ITALY) ex NATO Headquarter Area Mariateresa RUGGIERO

Strategy to re-active an urban landscape Valeria SCAVONE

823 ID 128

Two outstanding examples of vernacular architecture in Talas town, Anatolia

Duygu TURGUT

831 ID 129

Paul Bellot architecture: between resilience and redesign of "sacrum" Maria Carolina CAMPONE

841 ID 133

Greek Orthodox merchants in Western Mediterranean sea: commercial and canonical matters Antonio MATASSO

845 ID 134

Protection and Integration of linear watercourse cultural landscape in urban development ----- A case study of Orléans and Yangzhou Liang PENG

857 ID 136

Russian approaches to estimation and experience of monitoring of radon radiation Andrey V. VASILYEV

862 ID 137

Approaches and results of estimation of noise impact to the health of population

Andrey V. VASILYEV

870 ID 138

Automobile transport noise modeling and estimation in town conditions Andrey V. VASILYEV

875 ID 139

Majolica and Architecture. Treatment of the lacune. The case of the bell tower of San Paolo Bel Sito Saverio CARILLO

885 ID 140

The historical context and the urban regeneration Federica CAPRIOLO

Typological classification of vaulted structures in masonry churches Daniela CACACE, Gianfranco DE MATTEIS

904 ID 142

Innovative systems for the redevelopment of historical buildings: BIM application Simona COLAJANNI, Giusy Emanuela LO CACCIATO, Achille Roberto PORCASI

914 ID 143

Evaluation of the indoor comfort of the Arabic-Norman architecture for its valorization Simona COLAJANNI

922 ID 144

Structural behaviour of masonry vaults according to architectural types Gianfranco DE MATTEIS, Daniela CACACE

932 ID 145

Design with Nature: The connection between Critical Regionalism and Biomimicry in a Moroccan village Pedro MARTINS-MOURÃO, Pedro JANUÁRIO

942 ID 146

Preservation of historic buildings: two examples in Sant'Agata de' Goti, Italy Annachiara PIRO, Annalaura VUOTO, Filomena de SILVA, Pierpaolo D'A-GOSTINO, Fulvio PARISI, Francesco SILVESTRI, Anna SCOTTO di SAN-TOLO

952 ID 147

Sports Architecture: the soccer stadiums of the twentieth century in Brazil and Portugal

Beatriz ATTA, Pedro JANUÁRIO, Jorge BOUERI, João SOUSA MORAIS

960 ID 148

Data taking and quality control for complex surveys: Case study Sagrada Familia Juan CORSO, Jordi CASALS, Adria MARCO, Daniel LÓPEZ, Pilar GARCIA ALMIRALL

971 ID 151

Territory visions: dimensions of observing, measuring and returning Laura FARRONI, Marco CANCIANI, Matteo Flavio MANCINI, Silvia RINAL-DUZZI

981 ID 153

Reuse or Recycle? Ludovico ROMAGNI

Survey between protection and orientation of transformations. The case study of Floridia Rita VALENTI, Claudia FARACI, Sebastiano GIULIANO, Emanuela PATER-NÒ, Flavio SPADARO

998 ID 160

Public Buildings accessibility inFortaleza's Historical Center Camila BANDEIRA PINHEIRO LANDIM, Pedro Miguel GOMES JANUÁRIO, Márcia Maria VIEIRA HAZIN, Geórgia MORAIS JEREISSATI

1009 ID 161

The museum building and its role in conservation of artifacts in Albania Etleva BUSHATI, Florian NEPRAVISHATA

1019 ID 162

The use of new technologies in the commemoration projects of the centenary of the apparitions of Fatima Geórgia MORAIS JEREISSATI, Pedro Miguel GOMES JANUÁRIO, Márcia Maria VIEIRA HAZIN, Camila BANDEIRA PINHEIRO LANDIM

1029 ID 163

The implementation of the Smart City paradigm in complex and user-centric domains Mariacarla PANARIELLO

1037 ID 164

Traditional games and culture Antinea AMBRETTI

1041 ID 165

The "Right" to the quality of the "Preservation" for Italian architecture of the Second half of the 20th century Carla BARTOLOZZI, Gentucca CANELLA

1051 ID 167

Design 4.0. Practices and processes of diffuse and circular design for the enhancement and development of local cultural heritage Jurji FILIERI, Elisabetta BENELLI, Laura GIRALDI

1060 ID 171

Historic urban centers. Construction characters and seismic vulnerability Tiziana CAMPISI

1070 ID 172

Internet of things and artificial intelligence technologies preserve cultural heritage

Marin MARINOV, Maria KOKORSKA

Italian grain silos from the 1930s: inventory, knowledge, conservation and reuse Stefania LANDI

1088 ID 178

Destructive tests for mechanical characterization of in situ structural timber Francesco GUARINO, Alberto MANDARA, Gianfranco DE MATTEIS

1098 ID 179

Correlation between NDT results and mechanical strength of structural timber

Gianfranco DE MATTEIS, Francesco GUARINO, Alberto MANDARA

1108 ID 180

From information to knowledge Building new learning strategies in heritage field through graphics and new technologies Marina PUYUELO, Pedro FUENTES, Mónica VAL

1118 ID 183

Three Schools: Torino, Avellino, Palermo Efisio PITZALIS

1128 ID 184

Mediterranean Bio-Cultural Landscape: network of expertise Marina FUMO, Gigliola AUSIELLO, Monica CANNAVIELLO, Antonella VIO-LANO

1138 ID 185

Virtual community content sharing to support decision making process in protection, conservation and promotion of cultural heritage and landscape Antonio TUFANO, Roberto VALENTE, Modestino MATARAZZO, Enza GRAZIANO

1148 ID 186

Design 4.0. Practices and processes of diffuse and circular design for the enhancement and development of local cultural heritage Caterina GATTUSO

1155 ID 187

Hidden river: recovering the memory of a city Maria Grazia CIANCI, Francesca Paola MONDELLI

1165 ID 188

The role of evaluation in B.I.M. models: from the representation to the simulation of the design Giovanna ACAMPA, Fabiana FORTE

Adaptive and dynamic facade: a new challenge for the built environment Sergio SIBILIO, Roberta IAVARONE, Simona MASTANTUONO, Maria MANTOVA, Luigi D'AUSILIO

1183 ID 190

Preliminary energy analysis of the school building stock in the Province of Caserta

Sergio SIBILIO, Nicolò FALCIONE, Anna IMPROTA, Antonio ROSATO

1191 ID 193

Post-seismic rebuilding in Irpinia and resilience Maria Antonietta FALCI

1201 ID 194

A simplified analysis for seismic risk assessment of reinforced concrete school buildings Gianfranco DE MATTEIS, Pasquale BENCIVENGA, Francesco GUARINO, Carmela NOLA

1210 ID 196

The Mudéjar Style: An interpretation key of the Ibero-American Baroque architecture

María Fernanda GARCÍA MARINO

1220 ID 197

The rediscovery and enhancement of the historical "Wool Road" through its recognition and reuse project Paola CONDOLEO, Andrea ROLANDO, Daniela ORENI, Alessandro **SCANDIFFIO**

1230 ID 198

Sewell mining settlement: Construction of a unique landscape as an adaptive process to a complex and hostile territory María Dolores MUÑOZ, Ignacio BISBAL

1240 ID 200

REDESIGN + RESILIENCE= Stories of Alternation Maria Dolores MORELLI

1247 ID 201

A resilient pedagogy. The LANDesign® Project for "school-work alternation" Enrica PAGANO

1256 ID 202

Know to preserve: Archaeological remains of the triconch architectures in Turkey Danila JACAZZI, Raffaela FIORILLO

Green infrastructures and Eco-Planning: the Aversa conurbation Salvatore LOSCO

1274 ID 204

A New Role of Museums in Industrial Type Cities and Renovation Programs for the "Center-Periphery" Opposition: the Case of the Museum Quarter Togliatti Concept Elena SHLIENKOVA, Elena SPERK

1285 ID 205

Documenting the Architectural Heritage. From the survey to the three-dimensional modelling Pamela MAIEZZA

1293 ID 206

The connection between the Architectural Roman heritage and the Theory of Nodes as a management tool Isabel TORT AUSINA

1302 ID 207

Productive green in the city: opportunities for eco-oriented transformations

Raffaela DE MARTINO, Barbara DI VICO, Rossella FRANCHINO, Caterina FRETTOLOSO

1313 ID 208

Aldo Rossi: Berlin, 1960-1997 Maria Luigia DI BENNARDO

1322 ID 211

The Real Estate Fund for the redevelopment of Public Administration Properties Francesco VERDE

1331 ID 212

Complex Representation of Knowledge Gilda EMANUELE

1335 ID 226

Designing the resilience. A masterplan for the Opportunity Areas of Bromley Giovanni BELLO

1341 ID 230

The evolution of information disclosure through the Open Institutes Luciana ABATE

Knowledge and representation between ethics and aesthetics Rosaria PARENTE

1361 ID 232

The Future of Representation: parametric modeling in the HBim environment

Giuliana CHIERCHIELLO

1371 ID 270

Representing World Heritage properties, cultural landscapes and contemporary architectures: Amsterdam and Rotterdam Alessandro CIAMBRONE

1382 ID 271

Itineraries of urban identity Isabella PATTI

CARMINE GAMBARDELLA

UNESCO Chair on Landscape, Cultural Heritage, and Territorial Governance; President and CEO of Benecon SCaRL Research Centre on Cultural Heritage, Ecology and Economy (Consortium of five Universities: University of Campania "Luigi Vanvitelli", Pegaso University, University Federico II of Naples, University of Salerno, University of Sannio). Pro-Rector at the European Polytechnical University, EPU. Professor of Drawing at the Pegaso University and at the University of Campania. President of the International Forum of Studies 'Le Vie dei Mercanti' since its first edition in 2003. Honorary President of the Italian Committee of the Nation Fulbright Sector on Cultural Heritage Sustainable Development, Urban Planning, Architecture and Management of UNESCO World Heritage Sites. Editor and Founder of the series "Surveying is/or Project" and "Knowledge Factory", "Architecture, Heritage and Design". Component of the Scientific Committee of International Class A Magazine 'Abitare la Terra'/ 'Dwelling on Earth'.

During his academic career he has covered various roles including the Pro-Rector of Institutions, Academic Senator, Member of the Board, Director of the Department of Architecture and Industrial Design Luigi Vanvitelli, Dean of the Faculty of Architecture Luigi Vanvitelli, Director of the Department of Culture of the Project, Director of Doctoral School in the Discipline of Architecture, Coordinator of the PhD in Protection, Safety and Representation of the Environment and Structures and Territorial Governance, Coordinator of the PhD Program in Surveying and Representation of Architecture and the Environment, President of the Course Degree in Industrial Design. He has also been scientifically responsible for noteworthy national and international research project. He is author of numerous scientific papers on the important issues of the surveying and representation of the built and natural heritage.

UNESCO Chair on Landscape, Cultural Heritage and Territorial Governance BENECON Research Centre of Competence of the Campania Region for Cultural Heritage, Ecology and Economy, Naples, Italy
