Delivering Therapeutics Across Biological Barriers (E1)

Organizer(s) David Brayden, Claus-Michael Lehr and Kathryn Whitehead

May 6—9, 2019

Royal Dublin Society • Dublin 4, Ireland

Discounted Abstract Deadline: Jan 8, 2019

Abstract Deadline: Feb 6, 2019

Scholarship Deadline: Jan 8, 2019

Discounted Registration Deadline: Mar 6, 2019

Organized in Collaboration with Science Foundation Ireland

Sponsored by Astellas Pharma Inc.

Summary of Meeting:

The multi-disciplinary theme of crossing of biological barriers encompasses biology, chemistry, pharmaceutical formulation, polymeric and materials science, advanced cell biology imaging, microfluidics, and drug-device combination research. This conference occurs at the interface between cell biology and the use of technologies to exploit such understanding in order to translate therapies to patients. The program comprises leading researchers from academia, institutes, as well as from the pharmaceutical and medical device industry. The goal of the conference is to profile cutting edge research in specific areas of achieving drug delivery across biological barriers where a large translational impact would result for both industry and patients. By inviting cell biologists, technology developers, and formulators to the same conference, this will provide in depth discussions and offer a thorough perspective on the tissue and cell barriers that must be crossed in order to help guide technology approaches to achieve these breakthrough treatments.
