CONTENTS

36 About the conference
Loredana Di Lucchio, Lorenzo
Imbesi

49 EXHIBITIONS

51 ARTIFICIAL | City of Experiences
George Brown College, Canada

54 LANGUAGES | Post collaboration
as a form of counter-culture: The
birth of new languages
University of Johannesburg,
South Africa

57 LIFE | Design for social problems
in Mexico: living with disabilities
Autonomous Metropolitan
University, Azcapotzalco, Mexico

60 MAKING | New Textile
Topologies: Experiments at the
intersection of surface, textile
and form
The Swedish School of Textiles,
Sweden

63 MULTIPLICITY | Self-Acceptance
to Self-Indulgence
Pearl Academy, India

66 NEW NORMAL | Expedition 2
Degrees
Zurich University of the Arts

69 PROXIMITY | Newcomers: Design
for Immigrants
Pratt Institute's School of Design,
USA

72 RESILIENCE | Designing for
Resilience: Creating new
possibilities for industrial cities
University of Monterrey, Mexico

75 REVOLUTION | UFØ Drift: In
Search of Practice
ArtEZ University of the Arts
Arnhem, Netherlands

78 THINKING | Design and
awareness: user meeting
ESDAP Catalunya, Spain

81 DESIGN CULTURE (OF) ARTIFICIAL

83 A participated parametric design
experience on humanoid robotics
Francesco Burlando, Xavier
Ferrari Tumay, Annapaola Vacanti

99 A systemic vision for the common
good : |C|A|S|E| Goods Mobility
in the fourth industrial revolution
Veneranda Carrino, Federica
Spera

CONTENTS

117	Activist Activated: Efficacies of AR Political Poster Design Sarah Edmands Martin	199	Consensual (Design) Fictions: co-creating iterative use cases to define technology conceptualization David Hernández Falagán, Andreu Belsunces Gonçalves, Kevin Koidl
130	Art, Design, and Mathematics: Software programming as artifice in the creative process Carlos de Oliveira Junior, Eduardo Ariel de Souza Teixeira	215	Design of robotic for superhuman tasks Fabrizio Formatì
142	Artificial Creativity – Hybridizing the Artificial and the Human. Yael Eylat Van Essen	227	Design, space management and work tools: enhancing human work in transition to Industry 4.0 Luca Casarotto, Pietro Costa, Enrica Cunico
156	Artificial Intelligence is a Character? Exploring design scenarios to build interface behaviours Andrea Di Salvo, Andrea Arcoraci	237	Designers' skills for Social Robotics Maximiliano Romero, Giovanni Borgia, Rohan Sashindran Vangal, Francesco Baldassarra
168	Becoming Janus: The Subversive Potential of Face Recognition Technologies Romi Mikulinsky	251	Designing for the future by understanding evolving culture based on advancing technology and the changing behaviours that accompany it. Nayna Yadav
181	Between digital and physical. Envisioning and prototyping smart material systems and artifacts from data-informed scenarios. Stefano Parisi, Patrizia Bolzan, Mila Stepanovic, Laura Varisco, Ilaria Mariani	264	Designing Somatic Play for Digital Natives through a Body-centric Design Process Seçil Uğur Yavuz, Kristi Kuusk, Michaela Honauer

CONTENTS

279	Designing unpredictable futures. An anthropological perspective on the algorithmical prediction of human behaviour Giovanna Santanera, Roberta Raffaetà	360	From the evaluation of acceptability to design of an assistive robot for elderly Francesca Tosi, Mattia Pistolesi, Claudia Becchimanzi
290	Digital Creativity Tools Framework Marita Canina, Carmen Bruno	376	Future heritage and heritage futures. A design perspective on the activation of Digital cultural heritage stored in archives Margherita Tufarelli
304	Digital tools that support students to reflect on their design competency growth paths John Fass, Job Rutgers	386	Going beyond the problem of privacy: individual and social impacts of the use of personal information in connected services Laura Varisco
316	Domestic AI and Emotional Involvement. Design Perspectives Mauro Ceconello, Martina Sciannamé, Davide Spallazzo	400	Human and Artificial Intelligence for the Cultural Reform of Design Elena Laudante, Mario Buono
328	Empowered by Code, to act in real word Alfredo Calosci	412	Human Sensibility, Robotic Craft: Toward Autonomous Stonework Tom Shaked, Karen Lee Bar-Sinai, Aaron Sprecher
339	Exploring Digital Inequalities: How Welfare States are disappearing behind an AI Paola Pierri	423	Interface takes command. Educational environments, tools and practices to face the new normal. Alessio Caccamo
349	From Decoration to Functionality — Research on smart accessories design in the Internet era Qingman Wu	437	Intelligent Voice Assistants: A Review of User Experience Issues and Design Challenges Lucia Rampino, Sara Colombo

CONTENTS

449	Research on Gender Differences of Adult Head Shape in China Renke He, Wenxiu Yang, Wanshan Li, Haining Wang	537	The Perceptual and Dialogical Form of Design between Time, Space and Technologies Camelia Chivăran, Sonia Capece
461	Speculative Physical Models Created Through a Robotic Process Sara Codarin, Karl Daubmann	552	The role of Design in telepresence robotics experience Claudio Germak, Lorenza Abbate
476	Teaching Design in the Age of Platforms: A Framework for Platform Education Xinyi Li	565	The Venice Backup: Case studies on the use of Virtual Preservation Techniques on Architectural Heritage sites in Venice, Italy Kai Reaver
488	The body as an artefact: a case of hand prosthesis Venere Ferraro, Silvia Ferraris, Lucia Rampino	587	Towards a visual-based survey on explainable machine learning Beatrice Gobbo
502	The design of human machine interfaces: from data to risk prevention. Annalisa Di Roma, Alessandra Scarcelli	604	Toys and Play, Weapons and Warfare: Militarizing the Xbox Controller Rachel Berger
516	The Designer in the AI/Machine Learning Creation Process Frederique Krupa	619	Wearing the smart city: Supporting older adults to exercise by combining age-friendly environments and tailored digital public data Nicole Aimers, Alen Keirnan, Ann Borda, Sonja Pedell
526	The encounter between Design and Artificial Intelligence: how do we frame new approaches? Marzia Mortati		

CONTENTS

629	DESIGN CULTURE (OF) LANGUAGES	754	Data visualization as a qualitative driver in knowledge communication: an interpretative framework Giulia Ciliberto
631	A Sidewalk museum. Exhibiting the collective dimension of the moving image Nicolo Giacomo Ceccarelli, Marco Sironi, Sabrina Melis	771	Design and Cultural Sites: New signage methods and languages for fruition, accessibility and storytelling Monica Oddone, Irene Caputo, Marco Bozzola
645	Abstract to figurative, and everything in between: visual design approaches and linguistic codes of a traditional form of animated product. Vincenzo Maselli, Eleni Mouri	786	Design and the 'Magical magic'. Disney and history, perceived heritage and shared memory Luisa Chimenz
659	Al-Kafiye: A Symbol of Change Hala Abdel Malak	800	DEsign DEcide The sign Tsvetomira Girginova
688	Beyondstories. People Narrative makes a Territory Aureliano Capri, Valeria Michetti, Veneranda Carrino, Mauro Palatucci	811	Designing the Gross. In search for social inclusion Adrien Rigobello, Nadja Gaudillière-Jami
707	Brand in Product. The language of the brand to govern complexity Mario Rullo, Massimiliano Datti	828	Finding New Representations of Old Knowledge: a design study of visualizing I-Ching Yvette Shen
726	Creating Visual Identity as Constellation: Methodological Project for a Design Workshop Ximena Izquierdo, Magdalena Ballacey	843	Form is function. Ethics and aesthetics of digital technologies in inclusive interface design. Letizia Bollini

CONTENTS

852	<hr/> 'Graphicmance'. New Visual Languages between Design and Performance Giulia Scalera	938	<hr/> Performativity as a language of sense-making for cultural service in local museum Shu Hongming, Eleonora Lupo
865	<hr/> Inner Geographies as poetic-aesthetic knowing: the inspiration and manifestation of creative doings through an emotively-orientated sensory methodology Mizan Rambhoros	950	<hr/> Solid perspectives and optical corrections of spaces in graphic & architectural design Tommaso Empler
883	<hr/> Italian Pavillion at XXII Triennale di Milano Ilaria Bollati, Luisa Collina, Laura Daglio, Laura Galluzzo	962	<hr/> Spatial construction for ideational meaning: An analysis of interior design students' multimodal projects. Andrew Gill, Giovanna Di Monte-Milner
895	<hr/> Language and identity in new Italian design Stefano Follesa, Peian Yao	976	<hr/> Tales of Surprise: Exploring Sense Making Processes Through User Narratives Miray Hamarat, Ozge Merzali Celikoglu
906	<hr/> Metaphors as Knowledge Activators in Data Visualizations: the case of the Archipelago of Calvino's literary works Tommaso Elli, Maria de los Angeles Briones Rojas, Beatrice Gobbo, Margherita Parigini, Virginia Giustetto, Valeria Cavalloro, Michele Mauri	992	<hr/> The Design of Politics: Understanding the Arrest of Cesare Battisti Through the New Media Factor Noemi Biasetton
925	<hr/> Patient Autonomy Indicators: a knowledge visualization tool for patient autonomy support Wen Zhang, Yuan Liu, Li Hou	1007	<hr/> The Enlightenment of the Contemporary Transformation of Chinese Traditional Visual Space Perception on Cultural Sustainability design for all Jixiang Jiang, Dong Tao

CONTENTS

1021 The Interplay between Ethics and Aesthetics in Intelligent Systems-Users Interaction
Gabriele Barzilai

1034 The pluralistic aesthetics of nowadays design
Francesca La Rocca

1049 The role of vernacular typography in the linguistic landscape of multicultural Singapore: A multimodal analysis case study of a gentrified street
Min-Yee Angeline Yam

1063 The Threshold of Language: Design and Soma
Daniela Monasterios-Tan, Susan Sentler, Ginette Chittick

1082 Towards a new design culture of scientific production – Innovating the formats of scientific publication of design
Eleonora Lupo, Beatrice Gobbo, Emilio Lonardo

1098 Translation Design for medicine leaflets. Research and innovation.
Elena Caratti, Antonella Penati, Valeria Bucchetti

1115 Visual dialects. Exploring early design sketching in various design disciplines
John Daniel Öhrling, Åsa Wikberg-Nilsson

1127 Visualizing Offshore Foreign Direct Investments: The Atlas of Offshore
Michele Mauri, María De Los Angeles Briones Rojas, Jonathan Gray, Daniel Haberly, Chris Anderson

1144 What does this symbol mean? Icons as a Language for Emergency
Rodrigo Ramirez

1159 Where methods meet form
Meret Ernst, Maya Ober

1175 DESIGN CULTURE (OF) LIFE

1177 Adopt a costumer - to design new processes and packagings
Maria Benedetta Spadolini, Chiara Olivastri

1190 Autonomy as a Design Principle: Service Design for the Technology Literacy of Older Adults
Houjiang Liu, Miso Kim, Canqun He, Tia Thomson

1208 Bio-revolutions: radical change, design cultures and non-humans
Carolina Ramirez-Figueroa, Luis Hernan

CONTENTS

1222 Cognitive Ergonomics
Components for Analysis of User
Interface in Healthcare Industry
Mariia Zolotova, Angela
Giambattista

1238 Connect art and science for a
functional biomimicry in design
Andrea Forges Davanzati

1244 Development of a test setup for
validating a cognitive assessment
platform within ICU's
Muriel De Boeck, Philippe Jorens,
Guido De Bruyne, Kristof Vaes

1256 Food design as a tool for social
development: experimental study
in the evaluation of child smell
Ligia Afreixo, Francisco
Providência, Sílvia Rocha

1272 FUTUR.DRESS. The Superskin for
the Human Body in nearspace
Maria Antonietta Sbordonè, Ilaria
Giampetraglia, Alessandra De
Luca

1286 Hybrid systems of human |
technological | biological
products: a road to a greater
sustainability?
Marco Marseglia, Francesco
Cantini, Alessio Tanzini

1301 No more whining – natural smart
textile
Nuutinen Ana, Pietarine Heidi,
Kunnas Susan , Korpinen Risto,
Sipola Reeta

1308 Paving the way to post-digital
smart materials. Experiments on
human perceptions of a bio-
inspired cellulosebased
responsive interface
Stefano Parisi, Markus Holzbach,
Valentina Rognoli

1325 The flow of emotions in co-
creation
Mariluz Soto, Caoimhe Isha
Beaulé, Satu Anneli Miettinen

1337 The Food Futures Teaching
Cluster. Food Culture, Visual
Communication Design, and
Collaboration
Peter K. Chan, Ben McCorkle, Rick
Livingston

1351 The river and the revered: Tracing
the impermanence of the land,
the people and the embroidered
Indrajit De, Saumya Pande

1364 The Shape of Drugs: a matter of
Human-Centred Design
Antonella Valeria Penati, Silvia
Luisa Pizzocaro, Carlo Emilio
Standoli, Valeria Maria Iannilli

CONTENTS

1711 Material culture(s). Research paths in an evolving material design culture, and the connected future designer's attitudes
Doriana Dal Palù, Beatrice Lerma, Claudia De Giorgi

1724 Mind-mapping in design culture: A tool for ideation in graphic design education?
Philip Jones, Marion Morrison

1738 New scenarios for developing cooperative platforms for local manufacturing
Alberto Calleo, Giorgio Dall'Osso, Laura Succini, Michele Zannoni

1752 Playing for change: designing a board game for the circular economy
Thomas David Cockeram, Jessica Clare Robins, Emmanuel Tseklevs, Leon Cruickshank

1769 Progetto Glume: from milling waste to resource for new materials
Danilo Perozzi, Laura Dominici, Elena Comino

1785 Re-distributed manufacturing in makerspaces. Towards a model of sustainable production
Louis Rose

1799 Research on the Application of Lacquer Craft in Modern Accessories
Tianxiao Xie

1811 The Emerging Fashion-Tech Paradigm in the Contemporary European Landscape
Chiara Di Lodovico, Chiara Colombi

1825 The evolving role of prototypes in design research: a discussion on terms and meanings
Silvia D. Ferraris, Gabriele Barzilai

1840 The Making of a Dress: Explicating the Implicit Processes
Adrian Huang

1857 The shape of wellbeing: investigating an approach for the development of a design requirements framework for design for wellbeing projects
Sandra Dittenberger

1873 Weaving sequential changes – designing textiles with multiple embedded stages
Riikka Talman

CONTENTS

1891 **DESIGN CULTURE (OF) MULTIPLICITY**

- 1893 Architectural Design Education as an Agent of Change: The Case of the Ultra-Orthodox Branch, Jerusalem
Elissa Rosenberg
-

- 1904 “But I’m a lecturer not a therapist”: Educational Coaching – a proposed alternative approach to supporting students through their creative education
Gary Pritchard
-

- 1918 Decoding the birth of transcultural fashion
Shipra Kukreja
-

- 1934 Design as a medium for an informal learning. INDICOLearning from the interface to the activity
Marina Puyuelo, Mónica Val, Hugo Barros da Rochas
-

- 1946 De-stereotype UX Design – Discussing and managing issues related to the clustering of users in the design of innovative solutions
Margherita Pillan, Alessandra Mazzola
-

-
- 1958 Framing diversity: designing hearing aids from a deaf culture perspective
Patrizia Marti
-

- 1979 Gazes and Gatekeeping: Reconceptualising the entrance portfolio in the post-colony
Diane Steyn
-

- 1994 Hybridity as a culture of making
Maya Ober, Nicole Schneider
-

- 2011 Hyper-Contextual Futures in Mexico City
Paolo Cardini, Karla Paniagua
-

- 2025 Learning and Differences reciprocally shared and validated: A decade long Participatory Design collaboration between KG Elementary School and AD University
Raymond Patrick Zachary Camozzi, Helene Day Fraser, Caylee Raber
-

- 2040 On (un)becoming in Design Academia: A Coloured female’s autoethnography
Cheri Hugo
-

- 2058 The Ethics of Knowing a Shared Language and Intention in Design
Lisa Elzey Mercer, Terresa Moses
-

CONTENTS

2066 The Neighbourhood Home.
System of environments for plural
inclusion
Ilaria Longo, Sonia Massari,
Alessandro Spalletta

2081 Universal Visual Languages in a
Male-oriented Society
Valeria Bucchetti, Francesca
Casnati

2095 **DESIGN
CULTURE (OF)
NEW NORMAL**

2097 A Comparative Study of Online
Teaching Modes of Sino-Italian
School of Design: A Politecnico di
Milano, Tsinghua University, and
Tongji University perspective
Fan Chen, Lin Li

2107 A COVID-19 Horizon Scan Looking
for Post-Pandemic Implications
for Design
Marcus Foth, Glenda Amayo
Caldwell, Joel Fredericks

2126 A new way of perceiving the
locality: economic growth, social
inclusion, environmental
protection
Fabio Mongelli

2141 A Sustainable Jewellery Design
Practice for Psychological Health
after Covid-19
Huiyi Qu

2153 Autopoietic design; seven
components for a sustainable
future design model
Gonzalo Raineri Bernain

2165 Community-led design
capabilities during the COVID-19
pandemic and beyond
Mariana Fonseca Braga, Eduardo
Romeiro Filho, Haddon G.
Guimarães Pereira, Emmanuel
Tseklevs, Rosângela Míriam L. O.
Mendonça

2182 Cross-Team Brainstorming and a
Comparison of Online to Physical
Version
Heng-Yi Mie, Hsi-Jen Chen

2198 Design Education in a Pandemic
Context
Harald Skulberg

2210 Design for Sustainable
Healthcare. Cutting the impact of
medical products through
disposable packaging
Gabriele Maria Cito, Angela
Giambattista

CONTENTS

-
- | | | | |
|-------|---|------|--|
| 2227 | Designing new learning experiences in pandemic time: how digital can support a new didactic in Service Design
Andrea Taverna | 2302 | Identifying Factors for Designing a Successful Telemedical Training System for Remote Pediatric Physical Exams
Elham Morshedzadeh, Ph.D.,
Andre Muelenaer, MD, Jr, MD, MS.,
Michelle Morris, Dana Werlich, Margaret Nelson, MD. |
| <hr/> | | | |
| 2239 | Ecosystem Framework for Community Life Circles based on Life Projects in the Post-COVID-19 Era
Tao Chen, Yong-Ki Lee, Juyoung Chang | 2316 | Inter-University Design Workshop: plurality in design education
Inés Alvarez-Icaza Longoria, Diego Alatorre Guzmán, René Harari Masri, Lucero Donaji De la Huerta Santaella, Ana Elena Hernández Palomino |
| <hr/> | | | |
| 2253 | Expansive Video Capture – Up close, personal & specific tutoring “performances”
Brendon Clark | 2332 | Kids-centered Pocket Park design. Well-being for children in the urban post-covid context.
Benedetta Terenzi, Anna Laura Pisello |
| <hr/> | | | |
| 2265 | Gamified e-Learning approached through Emotional Design in the Post-Covid-19 era
Na Wei, Yong-Ki Lee, Juyoung Chang | 2347 | Nanomedicine and Tourism in the post-pandemic era: smart “mobility & health” through wearable design for lab-on-chips
Claudio Gambardella, Pietro Ferraro, Assia D'Alesio |
| <hr/> | | | |
| 2275 | Healthcare innovation during the pandemic time: digital technologies to enhance clinic 4.0
Stefania Palmieri, Mario Bisson, Alessandro Ianniello | 2358 | Post-pandemic medicines: towards a new normality
Antonella Valeria Penati, Carlo Emilio Standoli, Patrizia Bolzan |
| <hr/> | | | |
| 2289 | Hospitals’ decision-making regarding infrastructural adaptations in response to Covid-19
Pleuntje Jellema, Margo Annemans, Ann Heylighen | 2372 | Reaching Audiences in 2020
Sharon Hooper |
-

CONTENTS

-
- | | | | |
|------|---|------|---|
| 2387 | (Re)envisioning the contribution of design to the sustainable transition of healthcare systems
Amina Pereno | 2487 | Telemedicine, today more than ever. The ABBRACCI design concept for COVID-19 patient monitoring
Alessia Buffagni, Martina Frausin |
| 2404 | Reinforcing Networks of Place-Based Care and Resilience
Julie Van Oyen, Jacquie Shaw, Laura Kozak, Jean Chisholm | 2500 | The Challenges and Benefits of online Education and the possible impacts of the entry of IT firms in the education ecosystem
Nayna Yadav |
| 2419 | Research on rapid mass production of emergency products based on FDM 3d printing
Xueyan Wang, Dongmei Peng | 2512 | The design culture and the challenges of the new normal
Nicola Morelli |
| 2433 | Semi-immersive Virtual Habitat to Enhance Relaxation in People with Dementia during COVID-19 Emergency
Silvia Maria Gramegna | 2524 | The effects of eye expression on emotion perception
Yi-Hsun Liu, Hsi-Jen Chen |
| 2446 | Shifting paradigms in Sustainable Fashion Design education: Studying implications & effectiveness of pedagogical methods adopted in a pandemic setting
Pragya Sharma | 2537 | The value of design in the emergency-driven scenarios. Crafting Ecosystems with data
Francesco Dell'Aglio, Enza Migliore, Chiara Scarpitti |
| 2471 | Strengthening city resilience through the re-orientation of a social innovation incubation programme in Covid-19 time. The case of 'The School of the Neighbourhoods'
Marta Corubolo, Anna Meroni, Daniela Selloni | 2551 | Thinking With Card: Curriculum-Led Making Activities Integrated with Distance Learning
Benjamin Hughes |
-

CONTENTS

2569 Understanding public health communication design globally during the Covid-19 pandemic: The Good, the Bad and the Ugly
Emmanuel Tsekleves, Mariana Fonseca Braga, Alejandro Moreno-Rangel, Linli Zhang, Mafe Salazar, Hannah Field, Hayley Alter

2594 “United in isolation. An online letterpress festival”. A community response to the Covid-19 pandemic
Andrea Vendetti, Elettra Scotucci

2604 DESIGN CULTURE (OF) PROXIMITY

2606 A Design Experience for Interactive Narrative Based on The User Behavior
Yuan Yao, Haipeng Mi

2619 An answer to the complex representation of territory. The fertile ground of mnemotopes and design of communication.
Clorinda Sissi Galasso, Giovanni Baule

2630 Attractive Factors in the Experience of an Online User-supported Learning Platform
Min-Yuan Ma, Hsin-Yi Huang, Eric Chen-F Hsieh

2650 City Branding and Fictional Layers: Reading Istanbul through Filming Locations
Zeynep Arda, Onur Mengi, Deniz Deniz

2667 Co-Design processes for the inclusiveness of Rome's temporary communities
Gianni Denaro, Luca D'Elia, Safouan Azouzi

2679 Co-designing the future of a public space and its related services. The case of the Reggio Emilia Ducal Palace and its park
Marta Corubolo, Anna Meroni, Daniela Selloni

2694 Collaborative Futures: a pedagogical model for delivering future-focused and citizen-centred design education
Marianne McAra, Kirsty Ross

2710 Communicating social values to children using design solutions
Laura Giraldi, Marta Maini, Francesca Morelli

CONTENTS

-
- | | | | |
|------|--|------|---|
| 2720 | Creating an inclusive learning environment to support transformative learning and encourage upward educational mobility opportunities for economically or academically under-resourced design students
Michal Rotberg | 2800 | Design projects as drivers for organisational change in the public sector
Felicitas Smittinger Schmittinger, Alessandro Deserti, Francesca Rizzo |
| 2736 | Cultural Differences as Challenges and Design Drivers in the Development of Smart Assistive Technology for an Ageing Society
Danying Yang, Louise Moody | 2813 | Design when you are the other 90%, a student's perspective
Kyle Graham Brand |

CONTENTS

3031 Signs of the Artisan City
Eleonora Trivellin, Susanna Cerri

3046 Social networks as enablers of design cultures: An analysis of multiplex relationships among members of a creative hub
Sine Celik, Tua A. Björklund

3059 Subversive Design. Designer Agency Through Acts of Insurgence
Seth Parker

3072 The City of Care
Anna Anzani, Elena Elgani, Maria Renata Guarneri, Francesco Scullica

3084 The power of designing choices
Raffaella Fagnoni

3101 The systemic approach and the use of new technologies to communicate cultural heritage and develop a culture of proximity
Marco Faccini, Alessandro Spalletta

3121 Towards a Design Observatory: crafting a distributed approach
Nina Costa, Vasco Branco, Rui Costa, Afonso Borges, Raul Cunha, Ana Catarina Silva, António Modesto

3137 When a designer encounters an artisan: a parameter analysis investigation
Carla Paoliello

3153 DESIGN CULTURE (OF) RESILIENCE

3155 0 Textile. A Design Research applying Circular Economy in textile field
Maria Antonietta Sbordone, Viviana Vollono, Carmela Illenia Amato, Barbara Pizzicato

3173 A Research on the Sustainability in Traditional Cave-Dwelling Construction Skills in Northern Shanxi Province (Jinbei Area)
Runze Liu, Haoming Zhou

3182 A Study of Zero Waste Fashion Design and its Possibilities within a Design for Circularity Process.
Debbie Moorhouse, Tracy Cassidy, Parikshit Goswami, Andrew Hewitt

3198 Awareness, compatibility and equality as drivers to resilience in sustainable design research
Giuseppe Mincoelli, Gian Andrea Giacobone, Silvia Imbesi, Michele Marchi, Filippo Petrocchi

CONTENTS

CONTENTS

3382 Designing Sustainable Product-Service Systems applied to Distributed Economies in Water-Energy-Food Nexus approach
Renke He, Meng Gao, Carlo Vezzoli, Ke Ma

3401 Discovering Design Values in the Chinese Pre-Qin Classics
Miaosen Gong

3412 Eco-lab-orating. Insights from an ongoing intervention with design school faculty
Rakefet Kenaan

3424 Educating Designers for the Circular Economy: Innovative Digital Resources, Collaborative Learning and Synergic Actions
Lucinda Morrissey, Roberta Barban Franceschi, Ana Margarida Ferreira

3436 Evolving the conventional curriculum: innovative learning interventions in a classroom to enhance design students' learning competencies
Joselyn Sim, Harah Chon

3448 Fashion Futuring. Rethinking sustainable fashion design
Alessandra Vaccari, Ilaria Vanni

3458 FASHIONABLE FAÇADE: textile waste innovations for the built environment
Hilde Heim

3476 Food Cycles. Redesigning processes and products
Silvia Pericu

3487 From Objects and Products to Things and Stuff
Clare Green

3501 Green infrastructures and satellite images: the case study of Munich
Giovanni Borgia, Filippo Iodice, Federica D'Acunto

3516 I Don't Want to Feel Outdated. The dissonance between product attachment and contemporary relevance
Malene Pilgaard Harsaae

3527 Innovation through circular economy: Tool development for multidisciplinary approach to product-service-system Design
João Sampaio, Ana Afonso

3544 Lost in transition; Methodologies and tools of Product-Service Systems Design for major life transition
Maria Paola Trapani, Nadejda Cervinscaia, Nadejda Cervinscaia

3560 Materials Designers. Boosting Talent towards Circular Economies
Laura Clèries, Valentina Rognoli, Pere Llorach-Massana

CONTENTS

DESIGN CULTURE(S) | CUMULUS ROMA 2021
JUNE 08.09.10.11, SAPIENZA UNIVERSITY OF ROME

About the conference

Loredana Di Lucchio, Lorenzo Imbesi

Sapienza University of Rome

loredana.dilucchio@uniroma1.it, lorenzo.imbesi@uniroma1.it

The theme

More than three years ago (it was 2018), when we presented our candidacy to host the Cumulus Conference in Sapienza, our first effort was to set up a Conference Theme. The duty was not simple since we wanted to avoid any naïve, fashionable or captivating topic. We were in search of a theme which is appropriate to the times, the context and moreover, to the Cumulus's community.

Our starting point was to consider what Cumulus meant and still means, not only for us, but within the worldwide design community. Looking back in the history of Cumulus, we found an interesting picture in its name: in fact, "cumulus" is the English name of a specific kind of clouds and comes from a Latin word that means "heap, pile, mass". Therefore, the word Cumulus is refereed, at the same time, to those big clouds that appear in the sky every time in different forms and always in constant change, as well as it is referred to a set of singular elements that make up a unit together. As a consequence, Cumulus efficiently describes the idea of a set of many singularities that meet, settle and become each time a new and different entity.

This picture helped us to set our goal: offering to such variegated, mutant, but nevertheless aggregated "cumulus", a conference theme where to recognize itself. This idea of big entity made of a huge number of singularities is connected to the idea of community, and then we had no doubt that this was the exact purpose of the founders of Cumulus when they decided its name.

Today the concept of community is increasingly complex, since it is crossing new social, technological, political and economic challenges and at the same time it is more global and multicultural than ever, more and more enriched by new hybrid languages and habits, due to the increasing flows of goods and people around the world. As a consequence, also a

Design Community, as Cumulus, is evolving as a wide-open field with many new practices and sometimes new principles.

In this regard, in order to figure out such complexity, we found a suitable answer in another word with Latin roots: the word "culture". Culture comes from the Latin word "colĕre" which means "cultivating the land to make grow" and, figuratively, also "taking care" of something, including knowledge, and therefore, "cultivation through education, improvement and refinement of the mind". This second meaning of "culture" is based on an insightful concept by the ancient Roman orator Cicero in his *Tusculanae Disputationes*: "cultura animi", which is the cultivation of the soul.

The resulting parallel between the culture of the land and the culture of the soul was fascinating and highly significant to us, since it is showing the challenge of growing something new, starting from the roots, from the soil, from the context and - as we know - depending on available soil, context and roots, we are growing different plants, obtaining different fruits and seeds, to plant again in a virtuous life-cycle. Thanks to this metaphor, we understood that diversity is a prime condition for the birth and the growth of culture, while it doesn't mean opposition but combination, arrangement and hybridization. Thanks to this metaphor, we got back to the initial concept of accumulation, and to the concept of Cumulus.

On another note, the Cambridge English Dictionary states that culture is also "the way of life, the customs and beliefs, of a particular group of people at a particular time". This could be an interesting stimulus but, when associating "Culture" with "Design", it was immediately clear that we cannot refer to one unique Culture, but we need to open to the concept of bio-diversity, where Design cannot be considered as the result of a single dominant, globalized, levelling thinking.

Finally, looking into design as an expression of Culture(s) and Culture(s) as the outcome of Design means to take into consideration not only what we are doing now, but what we are inheriting from the past and which should be granted for the benefit of future generations, so intertwining past and future, tangible and intangible, innovation and tradition.

Here is our conference theme: Design Culture(S)

Here, the suffix (S) is not only indicating the plural, the diversities, but it is also connected with the "saxon genitive", which is taking Design as subject, while connecting it to other different objects/meanings.

Following this concept, we found the ten keywords which we used to describe the tracks:

Artificial, Languages, Life, Making, Multiplicity, Proximity, Resilience, Revolution, Thinking and New Normal.

Each keyword was enriched with three additional keywords, to better explain the different directions and connotations, which are:

- Artificial is connected with Digital, Technology, Robotics
- Languages is connected with Aesthetics, Expression, Visual
- Life is connected with Nature, Biology, Human
- Making is connected with Process, Production, Post-Industry
- Multiplicity is connected with Gender, Pluralism, Diversity
- New Normal is connected with Health, Education, Work&Play
- Proximity is connected with Places, People, Economy
- Resilience is connected with Social Innovation, Circular Economy, Sustainability
- Revolution is connected with Critical Thinking, Interruption, Change
- Thinking is connected with Theory, History, Criticism

We obtained 40 wonderful words, full of possible meanings, ready to be interpreted and declined by the worldwide community of cumulus to figure out Design not as a singular specific voice but as a plural ecosystem of meanings.

After three years, during which our world is extremely changed, we can say that these words and this topic seems even more current and significant.

In the next pages of the Conference Proceedings, we are very enthusiast to offer a big picture of the biodiversity of Design Cultures and the multiverse of our Cumulus.

The experience

Cumulus Roma 2021 'Design Culture(S)' covered four days full of parallel sessions, working groups, poster sessions, exhibitions, social events, and more, but above all attending was a new form of experience than a conference.

While feeling the responsibility of filling a long void caused by the pandemic, we tried to re-design the whole experience to deliver a new form of conference which is keeping the in-presence through the online opportunities, so to bring you all to Rome and get the colors, the smell and the taste of the city, the architecture, the arts, the food, and the wine, always giving a cultural and a scientific perspective.

When facing the challenges, we wanted to deliver a new format to the whole Cumulus community, with the aim of innovating with technology, enhancing networking and the sociability of the experience, and keeping everyone on board to ensure the participation and democracy to our association from anywhere in the world, no matter of the time zone.

After four full days, we trust this conference at Sapienza University of Rome to be one of the longest Cumulus initiatives, counting with approximately 680 attendees, more than 350 papers and posters, 10 exhibitions, 10 tracks and 80 parallel sessions, 20 track keynotes and

four plenary keynotes, more than 50 schools exhibiting in the New Members Fair from everywhere in the world, and 18 schools participating in the Italian Members Fair.

Our aim was to develop a new form of hospitality to welcome and to make all of you feel at home in Rome but in a new virtual environment, while sharing design research and knowledge, along with the true spirit of Cumulus.

It is not enough to have a good project to gain good results, but it is necessary to get good responses. Your reaction was extraordinary, not only for the massive amount of registered participants, but for the involvement, the enthusiasm and not lastly the patience you have shown during the days of the conference. You joined in perfect Cumulus style from all over the world: from Oceania to the Americas, from Africa to Europe, to Asia, and you have actively followed the four days continuously, participating in a chat that often could not make your voices heard, but made us feel your presence very close.

Thank you for trusting us since the very beginning to the very end, while making this event possible. We will remember it for a long time for its extraordinary nature. We wish we will meet all together soon again without mask, and we will keep the memory of these days together among the best memories of this difficult period.

Keynote speakers

Roberto Marchesini

Roberto Marchesini is Director of the Center for the Study of Posthumanist Philosophy, as well as the School of Human-Animal Interactions, both based in Bologna, Italy. His studies focus on philosophical ethology, bioethics, zooanthropology, and posthumansism in an effort to better comprehend human-animal interactions. The cornerstone of his philosophical proposal is the unmasking of a perspective error that places humans at the center and at the measure of his predicates. One of his last books reinterprets the union between human beings and technology as a partnership that emerged from the phylogenetic set of the Sapiens species, highlighting the hybridizing and shaping potential of technology. From this perspective, every invention, every discovery, has an epiphanic effect; that is, it opens up a new dimension of the unexpected and of opportunities that change the boundaries and the perception of what we define human.

Salvatore Iaconesi and Oriana Persico

Salvatore Iaconesi is a robotic engineer, designer and artist; Oriana Persico is a cyber-ecologist, autobiographer and expert in digital inclusion. Living and working together since 2006 under the brand [AOS – Art is Open Source], they created artworks and performances of global interest united by the exploration and observation of contemporary technological human beings and societies – and their continuous mutation. Promoting a possibilistic vision of the world in which art is the glue between science, politics, anthropology and economics, they are the founders of Nuovo Abitare and HER, the two research centers they use to study the psychological and social implications of data and computation in human societies. Together they wrote *Digital Urban Acupuncture* (Springer, 2016), *La Cura* (Codice Editore, 2016), *Read/Write Reality* (FakePress Publishing, 2011), *Romaeuropa FakeFactory* (DeriveApprodi, 2010) e *Angel_F: diario di vita di un'intelligenza artificiale* (Castelvecchi, 2009).

Pier Luigi Capucci

Pier Luigi Capucci has been concerned since the '80s with the studies on communication, the new media and the new art forms, and with the relationships among arts, sciences and technologies. His theoretical activity is concerned with technologies of representation and communication, with technoscience-based art forms and with the media archaeology studies. He published more than 350 texts in books, magazines and conference papers in Italy and abroad. Founder of the first online magazine in Italy NetMagazine / MagNet; president of Noema, journal on the relationships between forms of expression, technologies, sciences and society; member of the International Advisory Board in many editions of Ars Electronica. Recently he founded art*science, a three-year research project on art and climate change and he serves as a consultant to the European Commission on the relationships between scientific disciplines and technologies (in particular Artificial Intelligence and Big Data) and humanities.

Chiara Luzzana

Chiara Luzzana is an Award-winning Sound Designer. She pairs a broad range of leadership in Sound Design, Music Composition, Sound Branding, Soundtrack and Audio Installation collaborating with companies and agencies all over the world. Noted among others for her project "The sound of city", she explores and listens in awe to the artifacts of the urban environment, the products of the industrial cultures all around the world. Eclectic Artist, she wanted to break the rules imposed by notation, working only with noise. Former student at Berklee College, she investigated how the brain reacts to sounds, experimenting with everything from the neurobiology of musical cognition, to the construction of microphones and sound sculptures. Her projects and talks take us to a journey starting from listening to our life, up to listening to ourselves turning life into a "soundtrack".

DESIGN CULTURE(S) | CUMULUS ROMA 2021
JUNE 08.09.10.11, SAPIENZA UNIVERSITY OF ROME

Material culture(s). Research paths in an evolving material design culture, and the connected future designer's attitudes

Doriana Dal Palù^{*a}, Beatrice Lerma^a, Claudia De Giorgi^a

^aDAD – Dipartimento di Architettura e Design, Politecnico di Torino

*doriana.dalpalu@polito.it

Abstract | This contribution will investigate how material design culture is evolving: in fact, as designers, we can choose materials taking into account their variety during the design process, as well as design them. The article, through the analysis of a first exploration of just some of the most active and innovative academic case-study laboratories, in which tests and experiments on innovative materials for design are performed, will highlight the most recent research directions covered by designers in the new materials world: growing and living materials, DIY materials, active materials, materials in the circular economy, manufacturing processes applied to innovative fields and innovative ancient materials, rediscovered from the past and re-launched in the next future will be discussed. Those trends will be investigated to outline the directions of designer's and research group's activities and their new attitudes on the topic.

DESIGN BOUNDARIES; MATERIALS EXPERIENCE; MANUFACTURING PROCESSES; MATERIAL DRIVEN DESIGN; MATERIAL ACTIVISM

1. Expanding the horizon of the materials for design

Materials, as underlined by many authors (Ashby, Johnson 2009; Karana, Pedgley, Rognoli 2014; Karana et al. 2015; Miodownik 2014), are the essence of what matters just as the choices made by the designer when contriving conscious products. Expanding the horizon of research and experimentation activities that designers constantly perform, some emerging phenomena can be highlighted within the wide world of materials for contemporary design dictated by the hybridization between different disciplines, from the birth of a "scenario founded on the collaboration between design and science" (Ito 2016; Langella 2019) and also from the changes that the production processes have undergone, thanks to the evolution of some specific technologies: the researches on materials for design are as wide as ever and offer a broad spectrum of opportunities for achieving new material experiences in design (Karana et al. 2019). This contribution will investigate how material design culture is evolving: in fact, as designers, we can choose and feel materials taking into account their variety during the design process, as well as design themselves.

In recent years, the value of craftsmanship has grown significantly: this revaluation and re-flourishing of craftsmanship (Bardzell et al. 2012), or of those who have a deep connection with the material world and can "dominate a dialogue between knowledge abstract and practical", is parallel to the spread of the maker (and Fab Labs) phenomenon who, according to Richard Sennet (2013) responds to the need (of many designers) to regain possession of the surrounding world through an active experience, a material comparison with it (Miceli 2012).

Hard experimentations, biological methods and systems found in nature are applied to the study and design of engineering systems and modern technology: these are examples of how designers and other experts in different disciplines can collaborate to transform the matter and modify it at will: Synthetic Biology and Living Technologies are some of the disciplines in which man tries to produce "natural" materials and to face some of the key sustainable challenges of the 21st century.

On the other hand, the experiments in the families of DIY (Do It Yourself), cooked materials and open materials are characterized by subtle and labile boundaries: according to the principles of molecular gastronomy and alchemy (but also of botany and biology), today's designers are able to produce new materials for the project through new or renewed processes starting from industrial production waste, materials from plant sources (plants and fungi), animal sources and bacteria, traditional materials, such as wood or stone, and many others.

3D printing latest interesting frontiers go beyond the traditional 3D printing process: experiments have been carried out with food, ceramic and stone materials, but also for architectural fabrication. Sugar, waste polymers, flexible elastomers, organic mixtures, stone or glass can all be 3D-printed, thanks to a consolidated and renewed technology, by the use of new materials for the production process. And thanks to this technology and other

production and design processes, defined and cared for by interventions and design, they give a new shape to traditional materials and ancient arts.

Materials from the past, from local and ancient traditions are becoming more and more new future materials: an archaic material library that is still not set, should instead be conceived in the next future in Politecnico di Torino, investigating the ancient natural resources, artefacts and everyday practices of a specific area. Materials and cultural heritage, the core essence of typical territories that are disappearing or that have been forgotten by time, could be oriented to innovative and speculative further design developments.

2. Today's places of experimentation: the laboratories

In a new, more blurred vision of disciplinary boundaries, known as “The Age of Entanglement” (Oxman, 2016), the point of view changes: the focus of the materials designers – including that of manufacturers – is no longer primarily oriented towards the final application, but is increasingly curiosity-driven, i.e. guided by the pure and simple curiosity of researching, experimenting and observing the material.

The gym in which designers increasingly test the crossroads of knowledge in the matter of materials for design is represented by experiences gained during graduation theses and PhDs or – in the case of in-house designers – during their continuing education outside the company, working in interdisciplinary laboratories within universities or experimenting during workshops and summer/winter schools in close contact with artists, scientists and professionals in various fields. The research tools change too: books and scientific journals are abandoned and ecomuseums, pots and pans and microscopes are rediscovered, along with waste deposits and blogs. The following overview represents a first exploration of just some of the most active and innovative academic case-study laboratories, in which tests and experiments on innovative materials for design are performed. A selection of the most up-to-date laboratories is presented with a brief description that leaves room for the original presentation words of the team, accompanying it with the university or research body that hosts it, the country of origin, the name of the laboratory coordinator and the website, for further investigations, and a short overview on the originality of each approach.

2.1 Hybrid Design Lab

Università degli Studi della Campania “Luigi Vanvitelli”, Naples (Italy) [Prof. Carla Langella]

“Hybrid Design Lab is a research, design, and teaching laboratory geared towards testing the relationship between design and science. The lab is oriented to experience the opportunity to integrate advanced research, teaching and production through science-inspired design. One of the main objectives is to transfer the theoretical and experimental research in the areas of biological sciences, new materials and new technologies, to the design dimension of the sustainable

innovation of products and services. The ability to spread through common products, and preferably daily, new knowledge and sensitivity on the environment, human health and on social equity, offers new prospects for real and tangible improvement of quality of life and growth of awareness, precisely because based on large numbers and, therefore, a large impact. The HDL is based on the integrated processes that underlie the life of biological systems and the balance of their ecosystems. Birth, life, death and re-integration in the natural cycles become references to proposal design production, process and strategies for the recovery of resources, innovative, yet environmentally and socially sustainable.”

(<http://www.hybriddesignlab.org/>, accessed on February 13th 2020)

In Hybrid Design Lab, the original approach arises from the new and unprecedented prospects of *intersection between scientific knowledge and design culture*.

2.2 MakeGrowLab

Puławy (Poland) [Dr. Roza Janusz and Dr. Josh Brito]

“The project began with one question: What if we could grow materials instead of making them and at the end of their cycle, use it as fertilizer which would then be used to continue the cycle of a biological production system? The MakeGrowLab now consults, designs and produces bio-materials for mission-driven companies. The goal is to mimic the symbiotic processes of nature, to not pollute the environment but enrich it instead. They aim for The Biorevolution Movement - to fuse science with design, to create a fully circular production of local, sustainable materials and spread it around the world. The inspiration derives from the symbiotic processes of nature, specifically the life-cycle of plants, where there is no waste and everything is recycled. Since 2019 the team is growing with Future Farmers from different backgrounds but with the same goal: to spread The Biorevolution.”

(<https://www.makegrowlab.com/>, accessed on February 13th 2020)

The MakeGrowLab key-element of innovation is *thinking the material as a living element*, able to born, grow, live and die, exactly like any other living beings.

2.3 Design and Living Systems Lab

Central Saint Martins, University of the Arts London, London (United Kingdom) [Prof. Carole Collet]

“The Design and Living Systems Lab is a pioneering research laboratory that explores the interface of biological sciences and design to challenge established paradigms and envision new sustainable materials and forms of production for the future. The Lab explores a new hierarchy of relationships with the ‘living’ where designers operate within a sliding scale of a ‘natural nature’ and a new ‘programmable nature’ in the quest for innovative ecological design and fabrication models. The main objective is to explore biological sciences through design to grow new design

propositions that could facilitate the transition to the 'one planet living' horizon 2050. Not only we are beginning to explore the advantage of biological systems in terms of zero waste, minimum use of energy and materials, but with synthetic biology, scientists have developed means to bio fabricate like 'Nature' does. We can program and engineer living organisms to grow tailored materials. Such extraordinary tools can trigger a paradigm shift in terms of design and manufacture for the future."

(<http://www.designandlivingsystems.com>, accessed on February 13th 2020)

In the Design and Living Systems Lab design is seen as a *proposer of innovative fabrication models*, able to set potential speculative scenarios.

2.4 Mediated Matter

MIT Media Lab, Boston (U.S.A.) [Prof. Neri Oxman]

"The Mediated Matter group focuses on Nature-inspired Design and Design-inspired Nature. It conducts research at the intersection of computational design, digital fabrication, materials science and synthetic biology and apply that knowledge to design across scales from the micro scale to the building scale. They create biologically inspired and engineered design fabrication tools and technologies and structures aiming to enhance the relation between natural and man-made environments. The research area, entitled Material Ecology, integrates computational form-finding strategies with biologically inspired fabrication. This design approach enables the mediation between objects and environment; between humans and objects; and between humans and environment. The goal is to enhance the relation between natural and man-made environments by achieving high degrees of design customization and versatility, environmental performance integration and material efficiency. The group seeks to establish new forms of design and novel processes of material practice at the intersection of computer science, material engineering, design and ecology, with broad applications across multiple scales."

(<https://mediatedmattergroup.com/>, accessed on February 13th 2020)

In the Mediated Matter group, a step back to *natural processes intertwined with current production processes* informs the new Material Ecology culture.

2.5 [MI] - Material Incubator

Centre of Applied Research for Art, Design and Technology (CARADT), 's-Hertogenbosch (The Netherlands) [Prof. Elvin Karana]

"Material Incubator is a creative research lab that explores the potentials of materials from living organisms for an alternative notion of the everyday.

Bringing together researchers and practitioners from different schools, Material Incubator [MI] encourages tangible interactions with the living organisms, such as

algae, fungi, plants and bacteria, to explore and understand their unique qualities and constraints through diverse technical and creative methods taking artists, designers and scientists as equal and active partners in the material creation. The core research team of the MI includes artists and product designers specialised in bio-design, (digital) storytellers and micro-biologists.

In exploring and designing for an alternative notion of the everyday from materials from living organisms, the [MI] researchers ground on the theory of Materials Experience, which suggests that whilst our experience with an artefact may originate from - or be moderated by - a wide variety of sources, one of the prominent sources is its physical reality, i.e., its material(s)."

(<https://www.materialincubator.com/about>, accessed on February 13th 2020)

Material Incubator [MI] sets its original approach on a *co-creation process between different expertise*, within whom the design is a participant of the co-creation, and the new matter is the possible output.

2.6 Self-Assembly Lab

MIT's International Design Center, Boston (U.S.A.) [Prof. Skylar Tibbits]

"The Self-Assembly Lab is a research lab at MIT inventing self-assembly and programmable material technologies. Self-Assembly is a process by which disordered parts build an ordered structure through only local interaction. In self-assembling systems, individual parts move towards a final state, whereas in self-organizing systems, components move between multiple states, oscillate and may never come to rest in a final configuration. The Self-Assembly Lab is located in MIT's International Design Center, a cross-disciplinary design research centre. The Singapore University of Technology and Design was established in collaboration with MIT to advance knowledge and nurture technically grounded leaders and innovators to serve societal needs. This will be accomplished, with a focus on Design, through an integrated multi-disciplinary curriculum and multi-disciplinary research."

(<https://selfassemblylab.mit.edu/about>, accessed on February 13th 2020)

In the Self-Assembly Lab the *design process is informed by mathematics, physics, robotics and digital technologies*, following a "techno-creative" approach.

2.7 Material Experience Lab

Technische Universiteit Delft (TU Delft), Delft (The Netherlands) and Politecnico di Milano, Milan (Italy) [Prof. Elvin Karana and Prof. Valentina Rognoli]

"Materials Experience Lab is a cross country research group bringing together researchers/practitioners who introduces unique ways of understanding and designing (with) materials to radically change and enhance the relationship people have with materials and artefacts. The lab introduces unique ways of understanding and designing (with) materials by combining research methods, techniques, and

tools from product design, social sciences, materials science, and engineering. The term ‘materials experience’ describes the holistic view of materials in design, emphasising the role of materials as simultaneously technical and experiential. In most of the research activities, the Materials Experience Lab combines interpretive and empirical research techniques in a unique iterative manner, actively promoting a Do-It-Yourself (DIY) approach to materials that pushes the boundaries of material (driven) design. The DIY approach to materials brings people and materials closer in the making, promoting further consideration of contexts and time in designing, making, and use, greater awareness of the resources required, greater agency for working with materials, all of which leads to novel design outcomes.”

(<http://materialexperiencelab.com>, accessed on February 13th 2020)

In the Materials Experience Lab, the *direct experience of the matter* is the key point of the new materials development, with a “creating-by-doing” approach.

2.8 Institute of Making

University College London (UCL), London (United Kingdom) [Prof. Zoe Laughlin and Prof. Mark Miodownik]

“The Institute of Making is a multidisciplinary research club for those interested in the made world. The mission is to provide all makers with a creative home in which to innovate, contemplate and understand all aspects of materials and an inspiring place to explore their relationship to making. At the heart of the Institute of Making is the Materials Library – a growing repository of some of the most extraordinary materials on earth, gathered together for their ability to fire the imagination and advance conceptualisation. A place in which makers from all disciplines at UCL can see, touch, research and discuss, so that they can apply this knowledge and experience to their own practice. Alongside the collection is the Makespace – a workshop where members and guests can make, break, design and combine both advanced and traditional tools, techniques and materials. The facility brings together equipment, expertise and perspectives of making from a wide range of disciplines, encouraging users to engage in the craft, design, technology, history, philosophy, art and engineering of making.”

(<https://www.instituteofmaking.org.uk/>, accessed on February 13th 2020)

The original approach at the Institute of Making lies on a *makers community*, in which the exchange of knowledge between peers is fundamental for generating new know-hows.

2.9 Material Design Lab

KEA - Copenhagen School of Design and Technology, Copenhagen (Denmark)

“Material Design Lab consists of The Box, The Lab and The Library. The Box is a walk-in expandable box that contains an exhibition of raw materials. It is the starting point to a basic understanding of the ‘raw ingredients’ before they are processed and

mixed. The Lab itself is the heart of Material Design Lab and resembles a hybrid between a design prototyping workshop, a scientific laboratory and an industrial kitchen. It is a space designed for materials to be tested, manipulated, refined and potentially, for new ones to be created. The library is the Material Connexion Copenhagen collection containing 1500 material samples, as well as access to the online database providing detailed information on over 7500 materials. The library also holds a wide range of books on materials relating to design and architecture.”

(<http://materialdesignlab.dk/>, accessed on February 13th 2020)

Understanding and knowing the raw materials that are at the basis of the materials that we experience every day is the original approach at the Material Design Lab.

2.10 LAMA - Ancient Materials Analysis Laboratory

IUAV University, Venice (Italy) [Prof. Fabrizio Antonelli]

“The Ancient Materials Analysis Laboratory was created in 1993, with the aim of carrying out didactic, research and service activities for third parties in the field of stone and lithic materials used in ancient times. The extraordinary technological development of the last few years has made science previously unthinkable progress, and therefore also the acquisition of a large mass of data on the historical-artistic materials of cultural heritage in general, data that are of significant interest for the characterization, dating and conservation of the cultural heritage itself. The institutionalization of the above teachings, as well as archeometry, geoarchaeology, and various other disciplines such as chemistry or physics applied to conservation science, as well as the creation of associations and specialized journals, among other things with specific tasks promotional, has finally positively changed the national panorama in this sector of applied sciences.”

(<http://www.iuav.it/SISTEMA-DE/Laboratori3/>, accessed on February 13th 2020)

A reference to the *materials of the past to understand the materials of today* is the key point to the approach of the Ancient Materials Analysis Laboratory.

2.11 Wearable Technology Lab

University of Minnesota, St. Paul, MN (USA) [Prof. Lucy Dunne]

“The Wearable Technology Lab (WTL) is an interdisciplinary research laboratory founded in 2009. WTL research focuses on the intersection between apparel and new technology: for instance, in expanding garment functionality through dynamic geometry and new sensing functions; in improving the way we use, manage, and consume clothing; and in streamlining the design and manufacturing processes of smart clothing and e-textile products. New technology opens new frontiers in understanding the human body, mind, and capability through pervasive sensing, actuation, and interaction. Many projects deal with translating technological potential into the real, everyday world: understanding human physical and

emotional comfort and balancing these variables with trade-offs of performance variables in a smart system design.”

(<https://wtl.design.umn.edu/>, accessed on February 14th 2020)

The *intersection between new materials, new technologies and the world of wearables* is the meeting point of the Wearable Technology Lab, where new intelligent and active “skins” are conceived.

2.12 Smart Textile Design Lab

Swedish School of Textiles, University of Borås, Borås (Sweden)

“At the Swedish School of Textiles creativity and theory are combined with practical work in several machine parks and laboratories. The unique with the educational programmes is that students and researchers have the opportunity to work with the entire process, from hand knitting machines to advanced 3D techniques, from hand weaving to effective weaving machines. Students and researchers also have the opportunity to elaborate with colours and different types of coatings in the colour lab, to use pattern construction the traditional way or use the latest computer programmes. The well-equipped sewing room gives almost unlimited possibilities. The Smart Textile Design Lab turns textile traditions and materiality upside down; the researchers develop, explore, and experiment with new expressions for textiles through the use of various technologies and textile techniques.”

(<https://stdl.se>, accessed on February 14th 2020)

The process, from dyeing to knitting to sewing, is the main core of the Smart Textile Design Lab, where *innovation is the reinterpretation of traditional and well-established techniques and processes*.

As already introduced, this overview doesn’t want to be exhaustive, it rather outlines how the matter of material design is evolving in new material design cultures, thanks to the collaboration with different disciplines and know-hows, and new approaches, producing heterogeneous materials belonging to some possible clustered trends.

3. The consequent new material design cultures

The article, through the analysis of substantial case studies of the most recent and academic laboratories, in which innovative materials for design are tested and developed, highlights the most recent occurrences and research directions covered by designers in the new materials world: materials in the circular economy (i.e. from circular materials to urban mining); growing and living materials; DIY (i.e. Do-It-Yourself) materials and material tinkering approach; manufacturing processes such as 3D printing applied to innovative fields

(e.g. food, stone, architecture, etc.); innovative ancient materials, rediscovered from the past and re-launched in the next future.

It should be pointed out how designers feel the need to "compose, modify, transform, and self-produce their own materials" (Rognoli, Ayala 2018), by using ancient materials and new technologies, by modifying traditional materials, waste materials, bacteria, vegetables (see Figure 1)(Karana et al. 2019; Ayala-García, Rognoli, Karana 2017).

Figure 1. Biolace, Carole Collet.

For example, Blood Related (Figure 2) is a material that uses waste materials, a zero kilometre, for the production of new raw materials. Awarded at the Dutch Design Week in 2018, it is a compound material, printable like plastic, selected by dried and pressed cow blood: waste from the meat and livestock industry, they become raw materials and we are asked about the limits of what can be transformed and be matter. Moreover, as underlined in the introduction, designers, alchemists and cooks experiment the production of self-produced materials from vegetable sources: the principles of molecular gastronomy and methods, the techniques of self-production, individual or collective, are the tools for the creation of new democratic materials, accessible and with a low technological impact (Rognoli, Ayala 2018; Rognoli et al. 2015; Rognoli, Ayala, Parisi 2016a; 2016b; Parisi, Rognoli, Sonneveld 2017). On the other hand, the materials grow and transform themselves within laboratories (Figure 3): "we can grow all kinds of structures using living organisms, from foams that can replace plastics in footwear, to leather-like materials without animals. Furniture, flooring all are currently being prototyped. Fungi are able to grow materials that are naturally fire retardant, without any chemicals" (Lee 2019).

Figure 2. Blood Related, Basse Stittgen.

Figure 3. Packaging film from bacteria, MakeGrowLab.

While many of these activities are currently conducted on an experimental and extemporary basis, this does not mean that the approaches to research are not based on a solid scientific framework. Exploring the way that other professionals work and trying to "tune in" with their skills, sometimes borrowing their methods, helps not only material designers but also manufacturers to break free from prefabricated schemes, pursuing new currents and new avenues of research. The new figure of the materials designer is therefore more and more

outlined by ephemeral and blurred “boundaries”, coherently with the contemporary Design condition: in those laboratories, the designer turns himself into new professionals characterised by a hybrid knowledge, driven from different know-hows. We can therefore discover a “designer-maker”, a “designer-archaeologist”, a “designer-biologist”, a “designer-detective” and a “designer-alchemist”, following the latest materials culture trends (De Giorgi, Lerma, Dal Palù 2020). These and other emerging issues coming from the materials design culture are currently investigated by the authors of the present contribution.

About the Authors:

Doriana Dal Palù is a PhD and Researcher in Design at the Politecnico di Torino. She is specialised in acoustic perception and support for sound design, but her research extends to include innovation in the world of materials for design, focusing particularly on changes of technological paradigms.

Beatrice Lerma is a PhD, Researcher in Design at the Politecnico di Torino, and Executive Director of MATto, where she researches on sensory issues, material experience and perceived quality, and where innovative materials and processes are analysed in close relationship to the manufacturing and business sector.

Claudia De Giorgi is Architect and Full Professor of Design at the Politecnico di Torino. She is a researcher in the field of the culture of materials for design, technologies and production processes, investigating the sensory and sustainable dimension in a human-centred approach.

Acknowledgements: Special thanks go to those who have made an extensive contribution to the development of MATto, the Material library of Politecnico di Torino, and the advisory services provided to local businesses, as well as to all the companies and participants who have used the services and provided inspiration to further the research.
