Contents

Preface.....	VII
Authors	IX

PART - M:

An Introduction to Classical Molecular Dynamics..... 1

- Classical Molecular Mechanics (MM) 5
- Quantum Mechanics (QM)..... 9
- Force Fields (FF) 11
- Bond and non-bond interactions 13
- Numerical integration (Verlet)..... 20
- Control of system variables: Thermostats and barostats..... 21
- Applications..... 23

APPENDIX M-A: Molecular Dynamics Laboratory (by GROMACS).....	33
--	----

PART - K:

An Introduction to Classical Kinetic Theory..... 49

- Probability and Probability Density Function (PDF) 53
- Maxwell-Boltzmann PDF for the kinetic energy (1D) 57
- Maxwell-Boltzmann PDF for the velocity vector (3D) 59
- Maxwell-Boltzmann equilibrium distribution function (6D).. 61
- Changing paradigm: relaxation towards equilibrium 62
- Bhatnagar–Gross–Krook (BGK) model..... 70
- Irreversible dynamics: H-theorem 71
- Deriving Euler equations (for matching continuum) 73

APPENDIX K-A: Applied Lighting.....	76
-------------------------------------	----

- Simplified kinetic theory of photons..... 79
- Beer-Lambert law..... 80
- Radiative Transfer Equation (RTE)..... 81
- Human physiology 82
- Intensity distribution 87
- Artificial light sources 88

APPENDIX K-B: Lattice Boltzmann Method	90
--	----

• Key ingredients of the Lattice Boltzmann Method (LBM)	91
• Solutions with multiple time scales	95
• Asymptotic analysis by Chapman – Enskog expansion	105
• Applications	112
APPENDIX K-C: Kinetic Theory/CFD Laboratory (by PALABOS)	115

PART - C:

An Introduction to Continuum Thermo-Mechanics... 149

• Navier–Stokes–Fourier (NSF) system of equations: Conserved quantities	154
• Non-conserved quantities	168
• Compressible limit	173
• Incompressible limit	180
• Dissipative functions and turbulence	190
• Integral equations	199
• Applications	202
APPENDIX C-A: Tensor notation	208
APPENDIX C-B: Applied acoustics	222
• Linear and non-dissipative theory of sound propagation ...	224
• Pure tones, i.e. single sinusoidal waves	227
• Human physiology	232
• Sound in enclosed spaces for ensuring acoustic safety of workers	235
• How to deal with complex sounds	240
APPENDIX C-C: Numerical modeling	242
APPENDIX C-D: Continuum mechanics/CFD Laboratory (by OPENFOAM)	258

PART - D:

An Introduction to System Analysis and Design 265

• Exergy analysis in engineering systems made of many components	270
• Exergy analysis of multi-fluid systems (humid air)	279
• Applications	288

PART - R:

An Introduction to Model Reduction 291

• Elementary reactions and detailed chemical kinetics	296
---	-----

• Constrained extrema and equilibrium points	303
• Dynamical systems and Lyapunov functions.....	311
• Multiple time scales in homogeneous combustion.....	318
• Low dimensional manifolds, separation of motions and Quasi-Equilibrium Manifolds (QEM)	324
• Slow Invariant Manifolds (SIM) and their construction	330
• Applications.....	345
APPENDIX R-A: Model Reduction Laboratory (by CANTERA)	351
