Supplementary Materials: Spin-Coated *vs.* Electrodeposited Mn Oxide Films as Water Oxidation Catalysts

Simelys Hernández, Carminna Ottone, Sara Varetto, Marco Fontana, Diego Pugliese, Guido Saracco, Barbara Bonelli and Marco Armandi

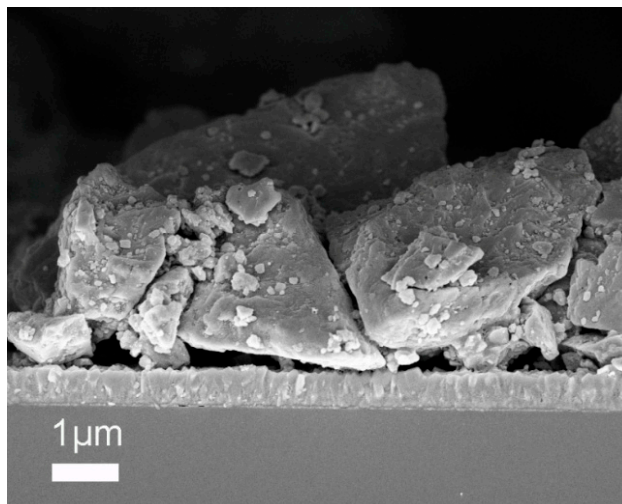

Figure S1. Cross-section FE-SEM image of a spin-coated film made with a non-ball-milled Mn_2O_3 powder.

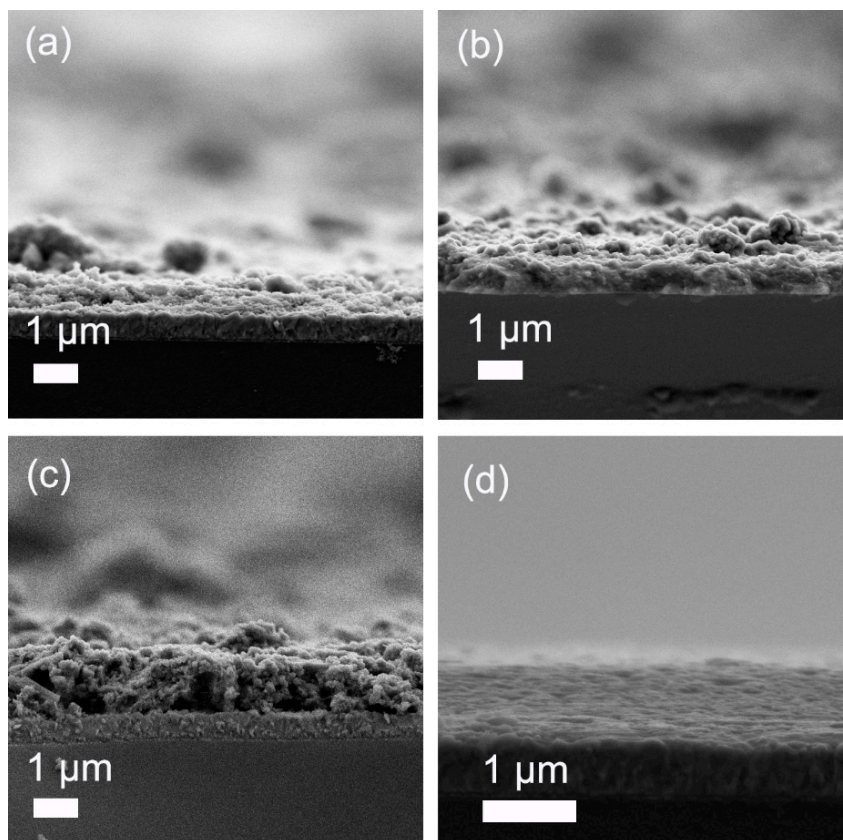

Figure S2. FE-SEM cross-section images of the films prepared by spin-coating of MnO_2 (a); Mn_2O_3 (b) and Mn_3O_4 (c) powders; as-made electrodeposited 5-min film (d).

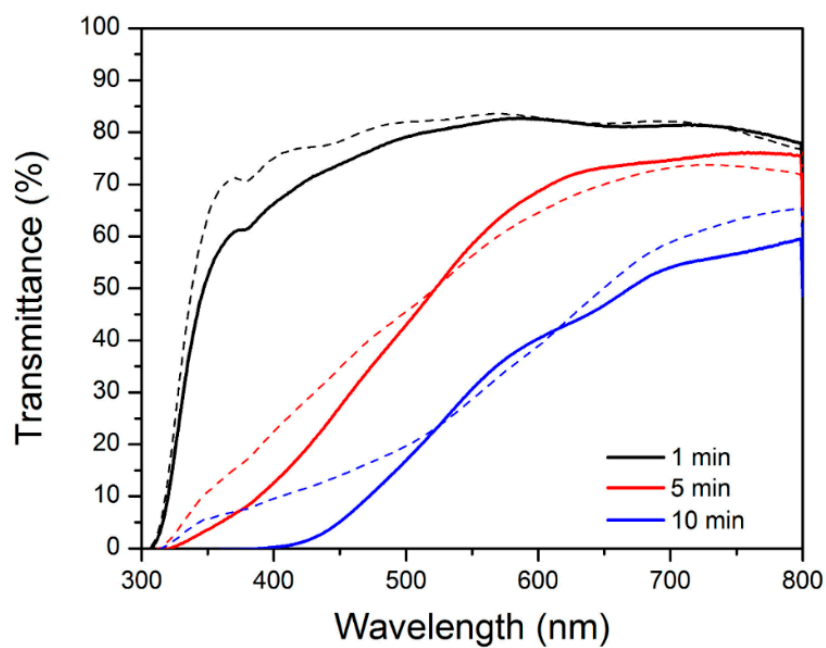

Figure S3. UV-Vis transmittance spectra of the electrodeposited films: as-made (continuous line) and calcined at 500 °C (dotted line).

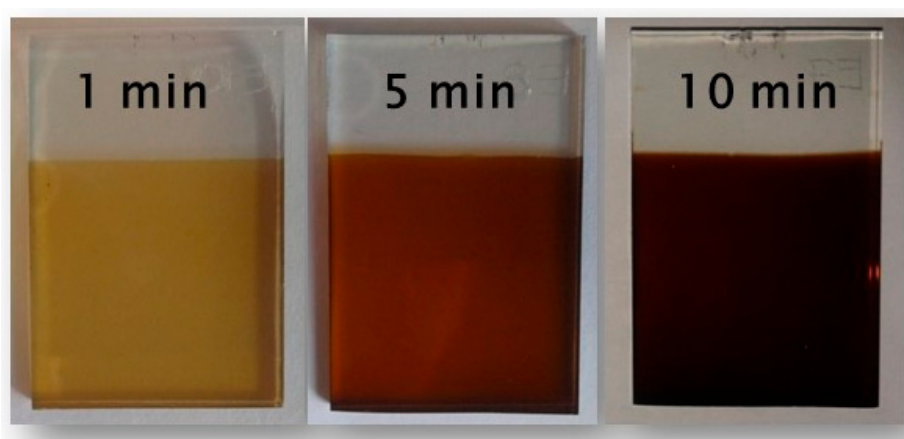

Figure S4. Photographs of the as-made films prepared by electrodeposition at different deposition times.

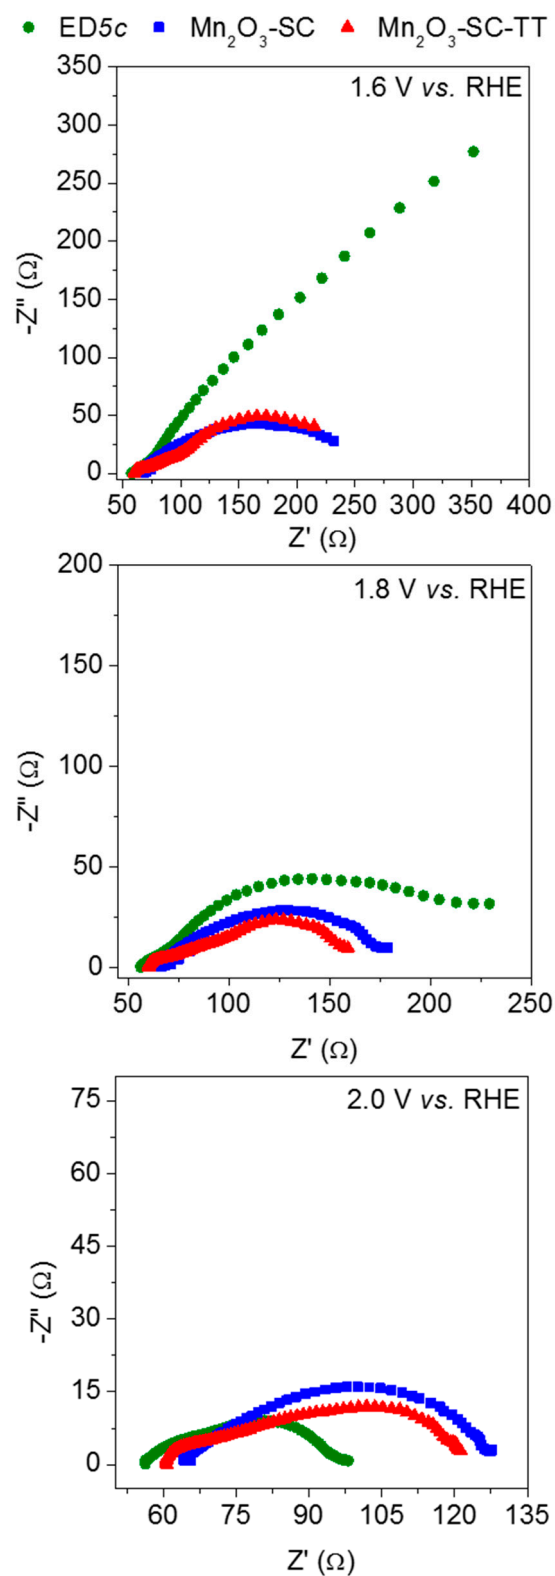

Figure S5. Nyquist plots of the EIS measurements acquired using the $\alpha\text{-Mn}_2\text{O}_3$ -based electrodes at 1.6, 1.8 and 2.0 V vs. RHE.
