S4671 Workshops
S4726 Posters
Conference Track contributions

**DESIGN FOR NEXT AESTHETICS**

- **S16**
  - A Framework For Product Design Based On Semantic Attribution Process  
  - Itsaso Gonzalez, Este Val, Daniel Justel, Ion Iriarte

- **S28**
  - A Semiotic Rosetta Stone: Developing a Designer-centric Meta-language of Pragmatic Semiotics  
  - Dave Wood

- **S38**
  - Aesthetic Justice. Design for a blind-spot culture  
  - Peter Buwert

- **S49**
  - Aesthetics in Design Semiotics Research. Developing foundations to better comprehend cultural habits and codes in bottom-up design processes  
  - Felipe Domingues, Salvatore Zingale, Dijon De Moraes

- **S63**
  - Aesthetics of futures. Shaping shared visions of tomorrow  
  - Manuela Celi, Elena Formia

- **S77**
  - An Art-based research laboratory translated into a Critical Design strategy  
  - Raphaële Bidault-Waddington

- **S89**
  - Beautiful interfaces. From user experience to user interface design  
  - Letizia Bollini

- **S102**
  - Building networks for knowledge exchange, and design strategies for climate futures.  
  - Henry Mainsah, Andrew Morrison, Håkan Edeholt

- **S110**
  - Can Timelessness through Prototypicality Support Sustainability? A Strategy for Product Designers  
  - Rachel Flood Heaton, Deana McDonagh

- **S122**
  - Contested Surfaces. Aesthetics of Colonization for Urban Coexistence  
  - Adriana Cuéllar, Marcel Sanchez Prieto

- **S134**
  - Creative Interpretation in Web Design Experience  
  - Johanna Silvennoinen, Rebekah Rousi, Laura Mononen

- **S146**
  - Design fiction, culture and climate change. Weaving together personas, collaboration and fabulous futures  
  - Andrew Morrison, Alittea Chisin

- **S160**
  - Design for Next... Year. The Challenge of Designing for Material Change  
  - Ben Bridgens, Debra Lilley

- **S172**
  - Entropy: Unpacking the form through post digital making  
  - Evelina Kourteva, Dermott Mc Meel

- **S184**
  - Exploring aesthetics through digital jewellery  
  - Maarten Versteeg, Johanna Kint

- **S196**
  - Future Aesthetics of Technology; context specific theories from design and philosophy of technology  
  - Wouter Eggink, Jeroen Snippert

- **S209**
  - House and Yacht: the Aesthetics of the Interior as a Link between Different Sectors  
  - Mariateresa Campolongo

- **S219**
  - Living on the Edge: design artefacts as boundary objects  
  - Michael Pierre Johnson, Jen Ballie, Tine Thorup, Elizabeth Brooks

- **S236**
  - “Make it beautiful”. An old request with difficult academic answers  
  - Silvia D. Ferraris, Lucia Rampino, Venere Ferraro

- **S249**
  - Metamorphosis of design. The aesthetics of the dark side  
  - Francesca La Rocca, Chiara Scarpitti

Discussing a New Direction for Design Management through a New Design Management Audit Framework  
Fulden Topaloğlu, Özlem Er

Hacking the organization: Organizational Transformation by Design  
Hans Kaspar Hugentobler

Involving stakeholders towards service implementation. Co-designing change of practices using a visual language  
Tim Overkamp, Freya Ruijs

Materiality Matters: Exploring the use of design tools in innovation workshops with the craft and creative sector in the Northern Isles of Scotland  
Cara Broadley, Katherine Champion, Lynn-Sayers McHattie

New Design Thinking Tools for the Next Generation of Designer-Entrepreneurs  
Sara Colombo, Cabirio Cautela, Lucia Rampino

Raising new opportunities for the Next Economy by exploring variable user needs for Computational Co-Design  
Viktor Malakuczi

Rethinking the Fashion Collection as a Design Strategic Tool in a Circular Economy  
Ulla Ræbilda, Anne Louise Bang

Service Design as a Cultural Intermediary. Translating cultural phenomena into services  
Claire Dennington

Service design as the ground for alternative social and economic scenarios  
Maria Antonietta Sbordone, Nicola Morelli

Setting-up a Design Factory within a Creative Science Park @Aveiro Region  
Teresa Franqueira, Cátia Pereira, Raul Pinto, Gonçalo Gomes

The choice of design. From businesses’ conditions to businesses’ attitudes  
Mariana Fonseca Braga

The Commodity of Trade in Contemporary Design  
Giovanni Innella, Paul Anthony Rodgers

THE FUTURE OF DESIGN SUPPORT: What Can We Learn From Design Support Experience in the UK, Estonia and Turkey?  
Melehat Nil Gulari, Ruth-Helene Melioranski, Ozlem Erç, Chris Fremantle

The Value of Agile Methods in Designing for Behavioural Change: A Case Study  
Dirk Ploos van Amstel, Martine Heemskerk, Reint Jan Renes, Sander Hermsen

The Value of Design in Innovation: results from a survey within the UK Industry  
Ricardo J Hernandez, Rachel Cooper, Bruce Tether, Emma Murphy

Universities’ experience with brand. The role of design in managing university communication and branding.  
Veronica Dal Buono, Fulvio Fortezza

Why do I love you Vaatelainaamo? Analysis of motivations, barriers and opportunities in a Finnish service for sharing clothes  
Rosana Aparecida Vasques, Mikko Koria, Maria Cecilia Loschiavo dos Santos

A contemporary didactics of innovation in product design. Grip Factors identification and evaluation  
Marco Mancini

A conversation with material  
Nicolai de Gier

A Design Thinking approach to introduce entrepreneurship education in European school curricula  
Ester Val, Itsaso Gonzalez, Ion Iriarte, Amaia Belita, Ganix Lasa, Maite Elkoro
A design-relevant mindfulness device
Fernando Rojas, Stuart English, Robert Young, Nicholas Spencer

A dialogical model for studio critiques in Design Education
Gaia Scagnetti

A Future Scenario for a Methodological Approach applied to PhD Design Research. Development of an Analytical Canvas  Violeta Clemente, Katja Tschimmel, Fátima Pombo

A Multilevel Approach for Social Transformations and its Implications on Service Design Education. Nicola Morelli, Amalia De Gótzen

Advanced Design as a paradigm for design education: learning systems within its platforms and practices  Roberto Ilíiguez Flores, Ruth León Morán

Algorithmic Futures. The Analog Beginnings of Advanced Parametric Design in First Year Studios  Patrick Sean Rhodes

An Interdisciplinary Design Education Framework  Hye-Jin Nae

Best Practices in Design Education Leads to a New Curriculum  Ana Thudichum Vasconcelos

Creative puzzlement: how deconstructing elements of object facilitates industrial design student’s imagination  Neil Smith, Shiro Inoue, Nick Spencer, Andy Tennant

Culture as a design “next”: Theoretical frameworks to guide new design, development, and research of learning environments  Tutaleni I. Asino, Lisa A. Giacuma, Victoria Chen

Dealing with wicked problems, in messy contexts, through prototyping  Bo Westerlund, Katarina Wetter-Edman

Design as a process tool of collaborative and multidisciplinary learning in society  João Bernarda, Ana M. Ferreira, Carlos Silva, Inês Queiraz

Design Culture in school. Experiences of design workshops with children  Fabrizio Pierandrei, Elena Marengoni

Design for social change and design education: Social challenges versus teacher-centred pedagogies  Nicos Souleles

Design for Social Sustainability. An educational approach for insular communities  Valentina Vezzani, Susana Gonzaga

Design ResearchScape. A visual exploration of Design Research publications  Stefano Perna

Design Thinking for Textiles: let’s make it meaningful  Louise Valentine, Jen Ballie, Joanna Bletcher, Sara Robertson, Frances Stevenson

Design Thinking: A New Road Map In Business Education  Gözde Çeviker-Çinar, Gökhan Mura, Melike Demirbağ-Kaplan

Designing a cultural event as an inclusive educational activity  Davide Fassi, Agnese Rebaglio, Annalinda De Rosa

Designing Design Education. An articulated programme of collective open design activities  Luisa Collina, Laura Galluzzo, Stefano Maffei, Vanessa Manna

Designing more responsible behaviours through Design Education: Reflections on a Brazilian pilot experience in Social Innovation for Sustainability  Viviane G. A. Nunes

E-LEARNING AND DESIGN PRACTICE. Tools and methods for professional learning of strategic design approach  Arianna Vignati, Luca Fois, Michele Melazzini, Xue Pei, Francesco Zurlo
Facebook as a Boundary Object in Industrial Design Studio. A SoTL Study
İşıl Oygür, Selen Devrim Ulkebaş

Flourishing in graphic design education: incorporating Ubuntu as a curricular strategy.
K.A. Chmela-Jones

From a master of crafts to a facilitator of innovation. How the increasing importance of creative collaboration requires new ways of teaching design.
Andrea Augsten, Moritz Gekeler

Getting Creative Again. Getting Creative Again
Josiena Götzsch

Human and Technological Dimensions of Making in FabLab
Iván Sánchez Milara, Georgi V. Georgiev, Jukka Riekki, Jani Ylioja, Mikko Pyykkönen

Ikebana: A Collaborative Design Pedagogy
Rachel Kelly

Infusing management education with design to foster resilience, adaptability and flexibility
Noemi Sadowska, Lorna Dallas-Conte

Interrogating Futures in Industrial Design Education
Saliha Türkmenoğlu Berkan, Özlem Er, Wolfgang Jonas

Is Design a Plus? A dilemma of disciplines when implementing design into academic education
Søren Bolvig Poulsen, Peter Vistisen, Sune Klok Gudiksen

Learning Architectural Design. Material and Immaterial Aspects.
Gerlinde Verhaeghe

Making Sense: Harnessing Communication through Prototyping
Giovanni Innella, Paul A. Rodgers

Material Tinkering. An inspirational approach for experiential learning and envisioning in product design education
Stefano Parisi, Valentina Rognoli, Marieke Sonneveld

Materials & Manufacturing Methods selection in product design: Experiences in undergraduate programs
Aline Souza, Rita Almendra, Lia Krucken

On Context, Concepts and Research: An Approach in Basic Design
Dilek Akbulut, Hatice Kesdi

On The Teachers Role in Interactive Prototyping
Jussi Mikkonen

PBL 2.0. Interdisciplinary, multicultural transformative sustainable education for design students
Elad Persov, Roshni Udyavar Yehuda, Ruti Kantor, Barak Pelman

Preparing design students for the market: an initial investigation on the required knowledge and skills for graphic designers in Brazil
Paulo Roberto Nicoletti Dziobczenski, Anamaria Amaral Rezende Galeotti

Reconstructing the critique. Using inclusive formative feedback in face-to-face and online communities of practice to improve knowledge acquisition in design education
Lucia Miceli, Lynette Zeeng

Reflexive Practices for the Future of Design Education: An Exercise in Ethno-Empathy
Manu J. Brueggemann, Angelika Strohmayer, Matthew Marshall, Nataly Birbeck, Vanessa Thomas

Rethinking the Design Studio-Centered Architectural Education. A Case Study at Schools of Architecture in Turkey
Burkay Pasin

Rethinking the education of retail design. What are the competences a retail designer needs in this fast evolving discipline?
Katelijn Quartier, Stephanie Claes, Jan Vannie

Semiotics in Design Education. Semiotics by Design
Michela Deni, Salvatore Zingale
Service Design pedagogy and effective student engagement: Generative Tools and Methods
Hena Ali, Silvia Grimaldi, Monica Biagioli

‘Sketching’ the new designers - going wide, going deep and doing it together
Rita Assoreira Almendra, Gonçalo Falcão

Systemic Design, from the content to the structure of education: new educational model.
Chiara Battistoni, Silvia Barbero

Systemic Food Design.it A website that narrates food supply chains from a systemic perspective
Franco Fassio

The Anatomy of a Multi-Sensory Design Course: Happy Sound Object
Yasemin Soylu, Berrak Karaca Şalgamçoğlu, Pelin Efli, Oki Kasajim

The design brief: inquiry into the starting point in a learning journey
Noemi Sadowska, Dominic Laffy

The Digital Corbeled Wall. A Pedagogical Approach to Digital Infrastructure and Traditional Craft
James Stevens, Ayodh Kamath, Komal Sharma

The end of the “briefing” and “the client” in graphic design.
Gonçalo Falcão, Rita Almendra

The Reflection of Experiential Knowledge Into Professional Practice: Case of Industrial Design Education
Enver Tatlisu, Çiğdem Kaya

The street as teaching space. A case study
Paul Woodruffe, Mandy Patmore

Theoretical studies and practical tools for a systemic design educational paradigm. Applications of Systems Thinking principles to design education
Laura Dominici

Towards a University Design School. Restoring the value of tacit knowledge through assessment
Lynne Whelan, Carmel Maher, Colin Deevy

Using Design Methods to Improve Design Quality: Verbalizers vs Visualizers
Younjoon Lee, Jaewoo Joo

Vulnerable children as change-agents within their communities: an educational methodology co-designed in Namibia
Valentina Salvi

Wearable Words: A case study applying Jewellery theory and practice to the education of Fine Art, Textiles Innovation and Design, Graphic Communication and Illustration students
Roberta Bernabei

What students say about their work and what it says about their work. Toward the development of rhetorical practice in the educational design studio
Myra Thiessen, Veronika Kelly

What’s Next in Design Education? Transforming role of a designer and its implications in preparing youth for an ambiguous and volatile future
Ramneek Kaur Majithia

Why a Logbook? A backpack journey as a metaphor for product design education
Violeta Clemente, Katja Tschimmel, Rui Vieira

World design. Educational approach for a new experience of sharing.
Maria Antonietta Sbordon, Rosanna Veneziano
DESIGN FOR NEXT ENVIRONMENT

S1558 A second life for Contemporary Ruins. Temporary Adaptive Reuse strategies of Interior Design to reinterpret vacant spaces Barbara Camocini, Oxana Nosova
S1566 An Integral Design Framework — designing a global village Fenja Sepers
S1580 Architecture for Regenerating Living Ecosystems: Designing a clay module for a vaulted dome structure Miruna Sladescu, Caitilin de Bérgigny, Glen Hill
S1596 Bioplastics made from upcycled food waste. Prospects for their use in the field of design Cecilia Cecchini
S1611 Circular Material Library. An Innovative Tool to Design Circular Economy Maarit Virtanen, Kati Manskinen, Sauli Eerola
S1620 Circular Product Design. A Multiple Loops Life Cycle Design Approach for the Circular Economy Ana Mestre, Tim Cooper
S1636 Climate Change. Design Teaching for a New Reality Paul Micklethwaite, Robert Knifton
S1651 Creating 21st Century Global Citizens. A design-led systems approach to transformative secondary education for sustainability Nikolas Winter-Simat, Natalie Wright, Jaz Hee-jeong Choi
S1662 Creating a Tool for Measuring the Social Value of Design Jea Hoo Naa, Youngok Choi, Andrew Walters, Busayawan Lam, Stephen Green
S1673 Data Visualization Collection. How graphical representation can inspect and communicate sustainability through Systemic Design Barbara Stabellini, Chiara L. Remondino, Paolo Tamborrini
S1682 DEMOCRATIC CARDBOARD. Materials and design for a sustainable society Davide Turrini
S1692 Design for Leftovers. From Food Waste to Social Responsibility Marco Bozzola, Dorianna Dal Palù, Claudia De Giorgi
S1705 Design for social sustainability. A reflection on the role of the physical realm in facilitating community co-design. Mirian Calvo, Annalinda De Rosa
S1725 Design Process and Sustainability. Method and Tools Marco Marseglia
S1738 Designing material interaction to promote water saving. An exploration of sensory language Sara Bergamaschi, Lucia Rampino
S1751 Designing on the Spot: Learning from the Social Design Projects in Gökçeada/Imbros Island Alayça Erâşçelik, Burak Taşdizen
S1765 Energy Performance Development of Non-regulated Retrofit Mass Housing Estates in Northern Cyprus Bertug Ozarisoy, Hasim Altan
S1782 Envisioning the future of public lighting with citizens for upcoming technologies Olli Heiskanen, Karthikeya Acharya
S1794 From Science to Design: the Design4Materials virtuous cycle Rossana Carullo, Cecilia Cecchini, Marinella Ferrara, Carla Langella, Sabrina Lucibello
S1807 GreenTeam. A new educative approach to sustainable design Andrea Di Salvo, Silvia Barbero, Andrea Giardino, Giada Rivella
S1827 Information design as a tool for promoting renewable energy Susanna Vanhamäki, Antti Heinonen, Kati Manskinen, Mirja Kälviäinen

Data Visualization Collection. How graphical representation can inspect and communicate sustainability through Systemic Design

Barbara Stabellini, Chiara L. Remondino, Paolo Tamborrini

Abstract: Big data are totally changing the business rules, the society, as well as the perception of ourself. The need of a big data oriented culture is becoming essential for everything that has an informative assets. Furthermore, technological innovation offers products and features unique that can help to convey values and meanings, for the purpose of communication based on increasingly strong interaction between people. In a world where everything is consumed in a short time, it is important to turn information as visual as possible, making simple what is complex. The visualization becomes a medium for increasing cognitive perception of the beholder, easing reasoning and storing of the information represented, showing patterns and relationships, known or not, maybe not easily visible without the aid of a visual representation of information.

Keywords: sustainability, systemic design, data visualization, complexity

1. Introduction

We are living in an era of exponential increase in data production, collection and usage in different sector and in everyday life moments; for this reason the ability to collect, understand, communicate and make sense of information is going to be a very important skill. In terms of sustainability, data produced by environment, both infrastructures and individuals become tools for reading the society, quantifying its sustainable and unsustainable aspects; the study and the analysis of such data is fundamental to better understand what may be the future action strategies in order to improve environmental, economic and social sustainability.

The growing interconnection due to the digitalization of information and relations, as well as the exponential spread of data generated by things, people and organizations, represent a challenge and an opportunity to design new tools suitable to complex and changing environment in which we live. Therefore, it is essential to understand how it is possible to extract the most value from information, emphasizing the communicative potential contained in them (Cukier, 2013).
In a world where everything is consumed in a short time, it is important to turn information as visual as possible, making simple what is complex. Data visualization becomes a fundamental medium to explore phenomena, encouraging thinking, information memorization and interpretation; in other words make complex phenomena accessible through visual tool. The transformation from data to information, anyway, is not that simple, but is a continuous improvement path where data are collected, categorized and contextualized in a specific ecosystem.

Because of the importance of this transformation, the discipline and the role of the design become essential. Nevertheless, today many works that can be included within the topic of visualization of the data is often the result of the lack of design or of a design that does not take into account an overview. For this topic, design is often considered a surplus, but the discipline should find space right here, by filling this gap, positioning itself at the beginning of within the design whole process, not just at the end, so as to be able to offer a complete design in all its stages, and not a simple and common add-on.

Specifically, the purpose of our research is find positioning in the beginning of the decision procedure, offering an important contribution in the selection of the correct type of visualization graphics, adapting and shaping to better define guidelines to analyze and broadcast informations with a sustainable point of view.

In order to achieve the best result in term of comprehension and communication, it becomes essential the creation of a multidisciplinary team; indeed, data visualization cannot simply be defined as the representation of information in visual form, but it is a complex multidisciplinary field (Card, 1999), ranging from data mining to visual art, from psychology of perception to graphic and systemic design.

2. Collection

The use of charts, graphs, maps, diagrams, and tables is not new; this kind of representation accompanied us in the course of human evolution in dealing with the history and the socio-cultural contexts, the spaces and the organization of our knowledge based on models more and more suited to our way of life and the way in which we feed of information.

2.1 Environment as a context

Always, the greatest experimentations and monitoring has been conducted into the environment. For this reasons it becomes of fundamental importance to keep track of all that surround us and being able to understand data that environment offers.

This scenario allows to assume that environment is the context. The environment, in fact, produces data from space to people, both analogic and digital as well as the intersection of them and their correlation. This data become raw material, on one hand enabling a continuous transformation, and on the other hand encouraging always more new projects and visions, shared only if make visible.

Always, the weather conditions monitoring interest people, scientists, amateurs and national or international institutes. The meteorological data, be they collected by professionals, citizens or sensors and other technologies, has been, and currently is, fundamental in an attempt to forecast meteo and global climate changes. The sailor observation has been of vital importance to develop the first ocean current and wind maps. It is possible to see a particular and interesting series of data in the captains on board diaries of the East India Company ship. In 1709, the Rochester ship sailed away from Great Britain to China and its captain kept a detailed diary with ship sketch, wild animal
drawings and particular locations pictures, recording also all the information about position, path and meteo forecast. Today, the availability of huge amount of data, allows scientists to complete this work. Their images aren’t only static maps, but are able to capture the dynamic nature of our global system. For example, the NASA visualization, shows oceanic currents thought satellite data collected between 2005 July and 2007 December, offering a dynamic overview, with significance and impact.

Also the healthcare field is strongly interested and involved in the data visualization; in fact, the graphic representation of the information is integral part for the healthcare improvement and the society well-being. History shows how sometimes the representation of harvested data could help to find causes and therapy diseases, as well as the tracking of infection rate and geographic distribution allow to monitor the epidemics diffusion or the identification of the local environmental factor that contribute to it. The most known and influential visualization in this topic is made by Dr. John Snow who tracked Soho deaths due to cholera in 1853 highlighting in a ghost map the water pumps of the area and crossing these data with the close deaths; in this way he could prove how epidemics didn’t spread out by Thames, but by the water contaminated with human waste, thus strongly linking the healthcare question to the environmental one. Today, the healthcare data mapping continues to be very important, especially if connected with other demographic dataset: significative contribution in this regard is the work by the UK Chief Medical Officer that every year publishes an annual report in which there are mapped a huge number of mortality and morbidity, with the goal of offer a clear and objective overview on the national clinic situation.

Maps are a topic widely linked to mobility research, not only for what that concern path, travel indication and signs. The analysis and the visualization of tracked data by individuals, as by companies, can offer a particular reading of the around society. Since 1980, curious is the use of data from the UPS delivery company, which, through the initiative called ORION (On-Road Integrated Optimization and Navigation), started to track its vehicles, monitoring speed, direction, braking, and drive train performance. These data are not only used to monitor daily performance, but to redesign the route structures: this approach allows to reorganize the delivery path optimizing fuel consumption and, consequently, environmental carbon emission.

In the end, if we consider environment as the context, we can not refer to the energy issue, which is today one of the hottest topic, including consumption, discovery and implementation. The growing availability of energy data allows people to determines how they use them defining what is their impact on the environment, also linking these information with other dataset as public transport, technology, production.

2.2 Data visualization collection

In order to better collect, visualize and communicate data, for example as above mentioned, but not only limited at it, the literature reveals a lot of types of graphical representation from specific sectors (such as finance, economics, science or meteorology), but in terms of innovation and experimentation, all those forms can be applied in areas for which they were not designed, offering the expansion of the domains and purposes to which these practices are applied.

There are a lot of research which try to find the best way to classify graphics. One of the first characteristic of the existing taxonomies of graphs and images is the difference between functional or structural. Functional taxonomies focus on the intended use and purpose of the graphic material. In contrast, structural ones are derived from exemplar learning and focus on the form of the image placing more emphasis on emotions, rather than its content. In general this tendency arise from the distinction between the different experts’s background, the firsts typically focused on statistics, computer science and engineering, while the second ones much more into graphic design and arts.
One of the most common and known example of functional classifications can be found in Edward Tufte. He identify four specific category in which classify graphics: the geographic representation through maps, the time-series, the graphic representation of events and phenomena which develop in space-time and the visualization of relations. (Tufte, 1983)

Also Heer, Bostock and Ogievetesky have put the emphasis on functionality in 2012; they proposed an articulated classification of graphics focusing on the experience of our times, and then paying attention on big data. Specifically, they identified four categories: time series, statistical distributions, maps, hierarchies and networks. (Heer, Bostock e Ogievetesky, 2013).

Different from a functional classification, Lohse et al. (Lohse, 1990; Lohse, 1994) classify visual representations using meaning and similarity between them. They identified six basic categories of visual representations: graphs, tables & time charts, maps & cartograms, diagram, networks, and icons.

In addition to taxonomies, there are a lot of catalog and table that collect the visualization methods. One of the most known book that collected and explain the use of each single type of representation is the manual of Harris (Harris, 1996). Another example is the Periodic Table of Visualization Methods (Lengler, 2007). This kind of classification aims to be less academic and draws on fields such as chemistry for his famous periodic table of elements. The periodic table is an interactive and prototypical example of Ben Shneiderman’s visualization mantra of Overview first, zoom and filter, then details on demand. (Shneiderman, 1996). The visualization methods are categorized in data visualization, information visualization, concept visualization, metaphor visualization, strategy visualization and compound visualization. All graphics are then specified according task and interaction (overview, detail, overview and detail), the cognitive processes (convergent thinking, divergent thinking), and the represented information (structure, process).

Starting from the fundamental taxonomy defined by Tufte and the most common basic classification by Lohse et al., we collected 96 visualization graphics trying to offer a comprehensive collection. As it is possible to see in figure 1, there are many type of graphics, some of these unknown to many people, due to their specific field of use.
Except for particular type of representations, the other ones can be used for different kind of data; nevertheless, it remains essential the right choice of the graphics in order to achieve the graphical excellence which consists of complex ideas communicated with clarity, precision, and efficiency. (Tufte, 1983; Cairo, 2013).

However, the importance of communication and the message that visualization itself should convey bring attention to move on the functions that these representations can perform. In order to allow this process, we identified twelve function to which a visualization have to perform, and we tried to relate each chart to each function defined: text analysis, comparison, timeline, distribution, flows, operation/process, hierarchy, location, probability/choice, proportion, range, relationship.

It’s important to specify that each representation can be generally used to perform many functions, both in different projects and at simultaneously in an only-one visualization. An example can be the word cloud, a representation in which words that appear most frequently are larger and words that appear less frequently smaller, this is normally used for the text analysis, but at the same time it can highlight concepts by using dimension of the words, or put them in relation by space disposition.

3. Context and relations

Nevertheless, the identification of the right representation is only a part of the process. Data on their own do not say anything, they should be placed in context, correlated with each other or with other datasets to identify distributions, sizes and correlations; they have to be sorted and aggregated according to designed criteria.

To do so it becomes essential the analysis of the initial data and their inclusion in the context, properly related to each other and/or with other datasets to identify distributions, sizes and correlations, sorted and aggregated according to criteria to the search.
As Tufte wrote, context is essential to reply to the question “Compared to what?” In fact, graphics must not quote data out of context and context is essential for graphical integrity. (Tufte, 1983)

Speaking of which, Wurman suggest that one of the main purpose of information representation is to help users avoid “the black hole between data and knowledge”; thanks to the relation with the context, unstructured information (reality and complexity), can be encoded in structured information and then knowledge and insights for a more conscious data driven decision making process, according to the DYKW hierarchies model (Data, Information, Knowledge, Wisdom).

Take into account context means also analyze users interested to the visualization, in order to offer a representation with a complexity level suitable to them and to answer the question “Do you know what it all means?”. In fact, basically there are two factors that influence the process of communication between the designer and the reference users: how the visualization used is well adapted to encode information on the nature of the story that you want to tell, and the background and knowledge of the reader about the argument represented. (Cairo, 2013).

Thus, information visualization is used to clarify and simplify information. It enables exploration of complex data, and can be used as a tool to persuade and convince observers of an idea by making information visible, highlighting the causes and effects of specific choices, comparing the different values and situations, showing the flow of a system and how it changes, analyzing the relations, distributing chaotic data into an ordered structure (Cairo, 2013; Shneiderman, 1996).

The design model used, known as Systemic Design (Bistagnino, 2011), pays attention to the organization, optimization and understanding of every single factor at play focusing at first on user requirements, then highlighting the best conditions and the most interesting facets to work on, while keeping an eye on their mutual relations. The focus moves from the simple sum of many elements towards a better understanding of the links between them and their strength, trying to balance functionality and aesthetics.

4. The role of design

To many people, information graphics are the images used in presentations throughout formal meetings or the graphs used in reports or newspaper articles. Many are used for these purposes; however, for each chart, graph, map, diagram, or table used in a presentation, there are others that are used for what that are called operational purposes. Representations for operational purposes are used by millions of people everyday for improving their efficiency and effectiveness, improving quality, solving problems, planning, teaching, training, monitoring processes, studying the geographic distribution of data, looking for trends and relationships, reviewing the status of projects, developing ideas, writing reports, analyzing census data, studying sales results, and tracking home finances. (Harris, 1996)

However, because of its historical roots in scientific reasoning, in academic research advanced information visualizations is often interpreted and characterized as scientific tools; the focus is therefore directed only to the functional requirements, not paying any attention to the aspects of user experience and graphic aesthetic.

In recent years, given the accessibility to the public of a great number of data sources as open data and environmental report, and the impact of that argument on the communication, the number of designers involved has increased, heavily impacting on the data visualization features. Information visualization is becoming more than a set of scientific tools to understand large data sets, but it is
emerging as a medium in its own right, with a wide range of expressive potential and its goal is to transform data into information and information into insight (Fiorina, 2004).

As in most other design-related fields, information visualization seeks to achieve a balance between the requirements of utility, soundness and attractiveness. Utility corresponds to the classic notions of functionality, usability, usefulness and other quantitative performance measures; these aspects generally define the effectiveness and the efficiency of the visualization. Soundness is concerned with reliability and robustness. Attractiveness refers to the aesthetics aspect: the appeal or beauty of a given solution; aesthetics does not limit itself to the visual form, but also includes aspects such as originality, innovation and user experience. (Moere, 2011)

If we take into account these requirements, the relation between design and information visualization become clear, and also become clear the importance of the design discipline during all the process: in fact, it is not an activity that can be added later.

But we want to underline the importance of the key background focused on sustainability. The goal of any data visualization design is rethink constantly both the workflow and the language in order to increase knowledge and understanding to enabling always more conscious behavior. It follows the importance of a network of actors involved in the project; networking is, in fact, considered essential for the growth of an ecosystem because of cooperation and inclusion processes help optimally managing the project and the goal pursuit.

5. Conclusions

Today, an increasing number of organization and corporation, as well as single users or public administrations, are realizing that volume, velocity and variety of data require always more new application. More than technology, though, they should adopt a different mind-set based upon data discovery and exploration; the visualization itself should be seen as a technology (Cairo, 2013) as an extension of ourselves. A good project has two main goals: it present informations and it allows user to explore and discover them; in other words data visualization is a tool for the designer to communicate with users and an instrument for users to analyze the reality presented.

In this way the role of the data visualization is to activate the attention and analysis process and generate order before people’s brain try to do it. Thus, the visualization becomes a medium for increasing cognitive perception of the beholder, easing reasoning and storing of the information represented, showing patterns and relationships, known or not, maybe not easily visible without the aid of a visual representation of information.

On the role of the design is important to remember that the function constraints the form and that the graphical elegance is often found in simplicity of design and complexity of data; graphics should not simplify message. They should clarify them, highlight trend, discover pattern and show hidden reality.

The postmodern personality is fluid, complex and dynamic, and the needs of the people are always new; the different identities have different approaches to technology, communication and information. For these reasons, it becomes highly interesting to give the possibility of obtaining results by ensuring the personalization experience, with the aim of satisfying the different needs and driving the user to repeat his behavior.

In this context, information visualization can be a valuable tool to improve communication, to offer a higher level of information, but even to allow users a personalized path. All this can be applied to different contexts coming to assume the role of cultural analysis tool for discovering and
understanding data, decoding the complexity of contemporary society and abilitate always more new sustainable and innovative practices.

About the Authors:

Barbara Stabellini is an ecodesigner interested in data visualization and innovation design, with a particular attention of the sustainability point of view. She is a PhD Candidate at Politecnico di Torino and co-founder of the Innovation Design Lab.

Chiara L. Remondino holds a MS in Ecodesign and is currently pursuing her PhD at the Politecnico di Torino. Her research is focused on big data, data visualization and sustainability. She obtained a Lagrange ISI Foundation fellowship on interaction in complex system. She co-founded the Innovation Design Lab.

Paolo Tamborrini is architect and Associate Professor of Design. Head of the Design School at Politecnico di Torino (Italy); founder and scientific coordinator of the Systemic Innovation Design Network (SyInDe). Editor about innovation design, eco-design and sustainability for the major design magazines.
