DESIGN FOR NEXT
Proceedings of the 12th European Academy of Design Conference. Sapienza University of Rome, 12-14 April 2017 supplement of The Design Journal
edited by Loredana Di Lucchio, Lorenzo Imbesi, Paul Atkinson
Contents

EDITORIAL

SV  Conference track contents
SXXV  Foreword  Paul Atkinson
SXXVI  Introduction: Designing a Design Conference  Loredana Di Lucchio, Lorenzo Imbesi
SXXVIII  Keynote speakers
SXXIX  About
SXXX  People
SXXXII  Conference Tracks & Track Chairs
S1  Design for Next Challenges  Loredana Di Lucchio
S9  Design for Next Design  Lorenzo Imbesi

CONFERENCE TRACK CONTRIBUTIONS

S16  Design for Next Aesthetics
S411  Design for Next Economy
S732  Design for Next Education
S1558  Design for Next Environment
S1978  Design for Next Health
S2592  Design for Next Industry
S2858  Design for Next Society
S3643  Design for Next Technology
S4171  Design for Next Thinking
S4671  Workshops
S4726  Posters
Conference Track contributions

**DESIGN FOR NEXT AESTHETICS**

S28  | A Semiotic Rosetta Stone: Developing a Designer-centric Meta-language of Pragmatic Semiotics  | Dave Wood
S38  | Aesthetic Justice. Design for a blind-spot culture  | Peter Buwert
S49  | Aesthetics in Design Semiotics Research. Developing foundations to better comprehend cultural habits and codes in bottom-up design processes  | Felipe Domingues, Salvatore Zingale, Dijon De Moraes
S63  | Aesthetics of futures. Shaping shared visions of tomorrow  | Manuela Celi, Elena Formia
S77  | An Art-based research laboratory translated into a Critical Design strategy  | Raphaële Bidault-Waddington
S89  | Beautiful interfaces. From user experience to user interface design  | Letizia Bollini
S102 | Building networks for knowledge exchange, and design strategies for climate futures.  | Henry Mainsah, Andrew Morrison, Håkan Edoholt
S110 | Can Timelessness through Prototypicality Support Sustainability? A Strategy for Product Designers  | Rachel Flood Heaton, Deana McDonagh
S122 | Contested Surfaces. Aesthetics of Colonization for Urban Coexistence  | Adriana Cuellar, Marcel Sanchez Prieto
S134 | Creative Interpretation in Web Design Experience  | Johanna Silvennoinen, Rebekah Rousi, Laura Mononen
S146 | Design fiction, culture and climate change. Weaving together personas, collaboration and fabulous futures  | Andrew Morrison, Alittea Chisin
S160 | Design for Next... Year. The Challenge of Designing for Material Change  | Ben Bridgens, Debra Lilley
S172 | Entropy: Unpacking the form through post digital making  | Evelina Kourteva, Dermott Mc Meel
S184 | Exploring aesthetics through digital jewellery  | Maarten Versteeg, Johanna Kint
S196 | Future Aesthetics of Technology; context specific theories from design and philosophy of technology  | Wouter Eggink, Jeroen Snippert
S209 | House and Yacht: the Aesthetics of the Interior as a Link between Different Sectors  | Mariateresa Campolongo
S219 | Living on the Edge: design artefacts as boundary objects  | Michael Pierre Johnson, Jen Ballie, Tine Thorup, Elizabeth Brooks
S236 | “Make it beautiful”. An old request with difficult academic answers  | Silvia D. Ferraris, Lucia Rampino, Venere Ferraro
S249 | Metamorphosis of design. The aesthetics of the dark side  | Francesca La Rocca, Chiara Scarpitti

A second life for Contemporary Ruins. Temporary Adaptive Reuse strategies of Interior Design to reinterpret vacant spaces  
Barbara Camocini, Oxana Nosova

An Integral Design Framework —designing a global village  
Fenja Sepers

Architecture for Regenerating Living Ecosystems: Designing a clay module for a vaulted dome structure  
Miruna Sladescu, Caitlin de Bérigny, Glen Hill

Bioplastics made from upcycled food waste. Prospects for their use in the field of design  
Cecilia Cecchini

Circular Material Library. An Innovative Tool to Design Circular Economy  
Maarit Virtanen, Kati Manskinen, Sauli Eerola

Circular Product Design. A Multiple Loops Life Cycle Design Approach for the Circular Economy  
Ana Mestre, Tim Cooper

Climate Change. Design Teaching for a New Reality  
Paul Micklethwaite, Robert Knifton

Creating 21st Century Global Citizens. A design-led systems approach to transformative secondary education for sustainability  
Nikolas Winter-Simat, Natalie Wright, Jaz Hee-jeong Choi

Creating a Tool for Measuring the Social Value of Design  
Jea Hoo Naa, Youngok Choi, Andrew Walters, Busayawan Lam, Stephen Green

Data Visualization Collection. How graphical representation can inspect and communicate sustainability through Systemic Design  
Barbara Stabellini, Chiara L. Remondino, Paolo Tamborini

DEMOCRATIC CARDBOARD. Materials and design for a sustainable society  
Davide Turrini

Design for Leftovers. From Food Waste to Social Responsibility  
Marco Bozzola, Dorianna Dal Palù, Claudia De Giorgi

Design for social sustainability. A reflection on the role of the physical realm in facilitating community co-design.  
Mirian Calvo, Annalinda De Rosa

Design Process and Sustainability. Method and Tools  
Marco Marseglia

Designing material interaction to promote water saving. An exploration of sensory language  
Sara Bergamaschi, Lucia Rampino

Designing on the Spot: Learning from the Social Design Projects in Gökçeada/Imbros Island  
Alayça Erasçelik, Burak Taşdizen

Energy Performance Development of Non-regulated Retrofit Mass Housing Estates in Northern Cyprus  
Bertug Ozarisoy, Hasim Altan

Envisioning the future of public lighting with citizens for upcoming technologies  
Olli Heiskanen, Karthikeya Acharya

From Science to Design: the Design4Materials virtuous cycle  
Rossana Carullo, Cecilia Cecchini, Marinella Ferrara, Carla Langella, Sabrina Lucibello

GreenTeam. A new educative approach to sustainable design  
Andrea Di Salvo, Silvia Barbero, Andrea Gaiardo, Giada Rivella

Lizette Reitsma, Stina Wessman, Elin Önnevall

Information design as a tool for promoting renewable energy  
Susanna Vanhamäki, Antti Heinonen, Kati Manskinen, Mirja Kälviäinen
Make the environment the (Next) Economy  
Vanessa Monna

Material Resignification in the Amazon. A way to construct sustainability scenarios  
Fernanda Sarmento, Monica Moura

Pocket Park: Product Urban design  
Francesco Armato

REPEAT – Textile Design for PV Modules! Design-driven Strategies for Photovoltaic Modules  
Tina Moor, Brigitt Egloff, Tina Tomovic, Stephen Wittkopf

Resilient Design: Mitigating Trepidation About Environmental Disasters  
Tonya Sweet, Catherine Caudwell

Rethinking Water: A CAAS (City As A Spaceship) design approach  
Susan Fairburn, Barbara Imhof, Susmita Mohanty

Shifting Conversations for Sustainability Transitions Using Participatory Design Visioning  
A. Idil Gaziulusoy, Chris Ryan

Space4Inspiration: Survival Lab. Designing Countermeasures for Natural Disasters  
Annalisa Dominoni, Benedetto Quaquaro, Susan Fairburn

Sustainable Design Futures: An open design vision for the circular economy in fashion and textiles  
Paul Smith, Jen Baille, Lynn-Sayers McHattie

Sustainable Design: Circular Economy in Fashion and Textiles  
Debbie Moorhouse, Danielle Moorhouse,

The Speedcycle: a design-led framework for fast and slow circular fashion lifecycles  
Kate Goldsworthy

VEG-HIVE. An easy to grow veg-kit for urban farmers  
Erminia D’Itria, Loredana Di Lucchio

DESIGN FOR NEXT HEALTH

A Healthcare Wearable for Chronic Pain Management. Design of a Smart Glove for Rheumatoid Arthritis  
Gozde Goncu-Berk, Nese Topcuoglu

A Multidisciplinary inspection of Dental Photography: What Do Dentist Think and What Can Designer Do?  
Yener Altiparmakogullari, Muhsin Cifter, Abdusselam Selami Cifter

A Review on Future Directions in Hospital Spatial Designs with a Focus on Patient Experience  
Abdusselam Selami Cifter, Muhsin Cifter

Co-designing co-design. Shifting the culture of practice in healthcare  
Paul Chamberlain, Rebecca Partridge

Design and Disability. Developing New Opportunities for the Design Curriculum  
Emma Gieben-Gamal, Sónia Matos

Design and Usability of the Next Medical Devices for the Home Care  
Francesca Tosi, Alessandra Rinaldi

Design Experiments. Identifying areas for intervention and designing medical technology for adolescents and young adults with type 1 diabetes  
Gillian M. McCarthy, Edgar R. Rodriguez Ramirez, Brian J. Robinson

Design facilitators’ journeys through the jungle of Co-in healthcare  
Remko van der Lugt, Tanja van der Laan

DESIGN FOR DUCHENNE. Guidelines for dwellings’ construction or renovation for Muscular Dystrophy-Affected Families  
Michele Marchi, Giuseppe Mincolelli
Design for Dysphagia: a new hardware-and-software mobile system to monitor patients’ swallowing
Nicolo Casiddu, Claudia Porfirione

Design for the ambient assisted living
Giuseppe Losco, Andrea Lupacchini, Luca Bradini, Davide Piaciotti

Design of non-speech sounds for human interaction. A conjunction between industrial design and psychology
Eduardo Tapia Olmos

Design probes and toolkits for healthcare: Identifying information needs in African communities through service design
Ralitsa D. Debrah, Retha de la Harpe, Mugendi K. M’Rithaa

Design research for the development of a Medical Emergency Ambulance. Design as a symbolic qualifier in the design of complex systems/products
Augusto de Sousa Coelho, Vasco Branco

Designing Care. How Design can improve medical products for a therapeutic wellbeing
Angela Giambattista

Designing for Aesthetic Disruption: Altering Mental Models in Social Systems through Designerly Practices
Josina Vink, Katarina Wetter-Edman, Manuela Aguirre

Designing for an ageing society: products and services
Silvia Pericu

Designing Industrial Design in the Highly Regulated Medical Device Development Process. Defining our valuable contribution towards usability
MaryBeth Privitera

Designing Interactive Music Systems with and for People with Dementia
Alexander Müller-Rakow, Rahel Flechtner

Designing Schools for Students on the Spectrum
Ulrike Altenmüller-Lewis

Beril Imamogullari, Alessandro Biamonti

Designing with Dignity: Social determinants of health and design research
Diana Nicholas, Kiera Townsend, Yvonne Michael

Discovering Service Variations through Service Prototyping
Vanessa Rodrigues, Stefan Holmlid

Emerging Trends and the Way Forward in Design in Healthcare: An Expert’s Perspective
Emmanuel Tsekleves, Rachel Cooper

Enhancing co-responsibility for patient engagement
Ineke Neutelings, Pierre Levy, Tom Djajadiningrat, Caroline Hummels

Environment as non pharmacological intervention in the care of Alzheimer’s disease
Silvia Maria Gramegna, Alessandro Biamonti

Health Co-Creation in Social Innovation: Design Service for Health-Empowered Society in China
Liang Yin, Davide Fassi, Hang Cheng, Han Han, Shushu He

Health Design: Mapping current situations, envisioning next steps
Guillermina Noel

How can constraint-induced movement therapy for stroke patients be incorporated into the design of a tangible interface? The case study of the ‘Biggest Hit’
Mailin Lemke, Edgar Rodriguez Ramirez, Brian Robinson

Imagined futures: designing future environments for the care of older people
Claire Craig

Improving the Pelvic Exam Experience: A Human-Centered Design Study
Gina A Taylor, Deana McDonagh, Michael J Hansen
Improving the Visualisation of Renal Blood Test Results to Enhance Patient – Clinician Communication  Adrian Gradinar, Jeremy Davenport, Heather Hill, Paul Coulton

Incremental and Radical Innovation: Design in Robotics for Autism. Teo and Ribi robots. Evolutionary Development  Maximiliano Romero, Andrea Bonarini, Andrea Brivio, Ksenia Rogacheva

Informing hospital design through research on patient experience  Margo Annemans, Liesbeth Stam, Jorgos Coenen, Ann Heylighen

Limited use only. How can the design of an everyday object help chronic stroke patients to overcome the learned nonuse of the upper limb?  Mailin Lemke, Edgar Rodríguez Ramirez, Brian Robinson

Multisensory design of pocket gardens for reducing stress and improving well-being, performance and satisfaction  Noemi Bitterman, Ella Simonov

Participant Observation in Cognitive Gameplay as a Rehabilitation Tool for Living Alone Elderly with Dementia in Hong Kong: A Pilot Study  Alex Pui-yuk King, Kin Wai Michael Siu

Persuasive Technology as key to increase Working Health Condition. The Case study of a Wearable System to prevent Respiratory Disease  Venere Ferraro, Mila Stepanivic, Silvia Ferraris

SAM - Simulation Airways Models  Elisabetta Cianfanelli, Lorenzo Corbetta, Gabriele Goretii, Lorenzo Pelosi, Maria Luisa Malpelo

Sense and movement. Design of a system for sensorimotor rehabilitation after stroke.  Francesca Toso

Systemic Design for Sustainable Healthcare  Silvia Barbero, Agnese Pallaro

Systemic innovation in sustainable design of medical devices  Silvia Barbero, Amina Pereno, Paolo Tamborini

The Effectiveness of Environmental Design for Physical Activities Promotion: Review  Aline Gonzalez-Moreno, Aldo Valencia-Hernandez, Omar Valencia-Hernandez

The fuzzy front-end and the forgotten back-end: User involvement in later development phases  Frida Almqvist

User-Designed Dementia Care Pathways. A disruptive approach to mapping dementia support services  Daniel Carey, Andy Tennant, Paul Rodgers, Katie Dodd

Wayfinding for health seeking: Exploring how hospital wayfinding can employ communication design to improve the outpatient experience  Eden Jayne Short, Stephen Reay, Peter Gilderdale

Well Connected. What does design offer in the complexity of blood donation management  Tine Thorup, Jen Ballie, Marjan Angoshtari

Will smart homes improve our lives? A design perspective towards effective wellbeing at home  Margherita Pillan, Sara Colombo

A Design perspective for IoT products. A case study of the Design of a Smart Product and a Smart Company following a crowdfunding campaign.  Ilaria Vitali, Venanzio Arquilla, Umberto Tolino

Changing roles. Role theoretical approach to customer involvement in industrial service development  Sanna Peltonen
Design Absorption and Learning Processes: a study on designers’ perceptions about companies.  Ivana Ravanello, Fabiane Wolff, Andréa Capra

Design and the Fourth Industrial Revolution. Dangers and opportunities for a mutating discipline.  Tomás García Ferrari

Design for Next Connected Appliances  Eleonora Fiore, Paolo Tamborrini, Silvia Barbero

Designing Fast & Slow. Exploring fashion textile product lifecycle speeds with industry designers  Rebecca Earley

Digital Maker Networks. Benefits, barriers and opportunities for re-localised UK manufacturing for the future  Paul Smith

Emotional service experience toolkit for servitization  Miia Lammi

Fashion Design for Short Male Consumers  Osmud Rahman, Henry Navarro

Footwear design. The paradox of “tailored shoe” in the contemporary digital manufacturing systems  Annalisa Di Roma

Go with the Flow: Accelerated digital design in the age of Post-agility  John Knight

Hospital of Objects. Recycling plastic from the small electronic devices to redesign old objects by the 3d printers  Chiara Petrucci, Loredana Di Lucchio, Lorenzo Maria Cafiero, Riccardo Tufi, Alessio Ubertini, Flavio Caretto

Industry 4.0, Innovation and Design. A new approach for ergonomic analysis in manufacturing system  Elena Laudante

Industry 4.0: Is It Time for Interaction Design Craftsmanship?  Daniela Petrelli

Networked production and outsourced design. A comparison of three case studies  Silvia Gasparotto

Abstract: Big data are totally changing the business rules, the society, as well as the perception of ourself. The need of a big data oriented culture is becoming essential for everything that has an informative assets. Furthermore, technological innovation offers products and features unique that can help to convey values and meanings, for the purpose of communication based on increasingly strong interaction between people. In a world where everything is consumed in a short time, it is important to turn information as visual as possible, making simple what is complex. The visualization becomes a medium for increasing cognitive perception of the beholder, easing reasoning and storing of the information represented, showing patterns and relationships, known or not, maybe not easily visible without the aid of a visual representation of information.

Keywords: sustainability, systemic design, data visualization, complexity

1. Introduction

We are living in an era of exponential increase in data production, collection and usage in different sector and in everyday life moments; for this reason the ability to collect, understand, communicate and make sense of information is going to be a very important skill. In terms of sustainability, data produced by environment, both infrastructures and individuals become tools for reading the society, quantifying its sustainable and unsustainable aspects; the study and the analysis of such data is fundamental to better understand what may be the future action strategies in order to improve environmental, economic and social sustainability.

The growing interconnection due to the digitalization of information and relations, as well as the exponential spread of data generated by things, people and organizations, represent a challenge and an opportunity to design new tools suitable to complex and changing environment in which we live. Therefore, it is essential to understand how it is possible to extract the most value from information, emphasizing the communicative potential contained in them (Cukier, 2013).

© 2017 The Author(s). Published by Informa UK Limited, trading as Taylor & Francis Group. In a world where everything is consumed in a short time, it is important to turn information as visual as possible, making simple what is complex. Data visualization becomes a fundamental medium to explore phenomena, encouraging thinking, information memorization and interpretation; in other words make complex phenomena accessible through visual tool. The transformation from data to information, anyway, is not that simple, but is a continuous improvement path where data are collected, categorized and contextualized in a specific ecosystem.

Because of the importance of this transformation, the discipline and the role of the design become essential. Nevertheless, today many works that can be included within the topic of visualization of the data is often the result of the lack of design or of a design that does not take into account an overview. For this topic, design is often considered a surplus, but the discipline should find space right here, by filling this gap, positioning itself at the beginning of within the design whole process, not just at the end, so as to be able to offer a complete design in all its stages, and not a simple and common add-on.

Specifically, the purpose of our research is find positioning in the beginning of the decision procedure, offering an important contribution in the selection of the correct type of visualization graphics, adapting and shaping to better define guidelines to analyze and broadcast informations with a sustainable point of view.

In order to achieve the best result in term of comprehension and communication, it becomes essential the creation of a multidisciplinary team; indeed, data visualization cannot simply be defined as the representation of information in visual form, but it is a complex multidisciplinary field (Card, 1999), ranging from data mining to visual art, from psychology of perception to graphic and systemic design.

2. Collection

The use of charts, graphs, maps, diagrams, and tables is not new; this kind of representation accompanied us in the course of human evolution in dealing with the history and the socio-cultural contexts, the spaces and the organization of our knowledge based on models more and more suited to our way of life and the way in which we feed of information.

2.1 Environment as a context

Always, the greatest experimentations and monitoring has been conducted into the environment. For this reasons it becomes of fundamental importance to keep track of all that surround us and being able to understand data that environment offers.

This scenario allows to assume that environment is the context. The environment, in fact, produces data from space to people, both analogic and digital as well as the intersection of them and their correlation. This data become raw material, on one hand enabling a continuous transformation, and on the other hand encouraging always more new projects and visions, shared only if make visible.

Always, the weather conditions monitoring interest people, scientists, amateurs and national or international institutes. The meteorological data, be they collected by professionals, citizens or sensors and other technologies, has been, and currently is, fundamental in an attempt to forecast meteo and global climate changes. The sailor observation has been of vital importance to develop the first ocean current and wind maps. It is possible to see a particular and interesting series of data in the captains on board diaries of the East India Company ship. In 1709, the Rochester ship sailed away from Great Britain to China and its captain kept a detailed diary with ship sketch, wild animal
drawings and particular locations pictures, recording also all the information about position, path and meteo forecast. Today, the availability of huge amount of data, allows scientists to complete this work. Their images aren’t only static maps, but are able to capture the dynamic nature of our global system. For example, the NASA visualization, shows oceanic currents thought satellite data collected between 2005 July and 2007 December, offering a dynamic overview, with significance and impact.

Also the healthcare field is strongly interested and involved in the data visualization; in fact, the graphic representation of the information is integral part for the healthcare improvement and the society well-being. History shows how sometimes the representation of harvested data could help to find causes and therapy diseases, as well as the tracking of infection rate and geographic distribution allow to monitor the epidemics diffusion or the identification of the local environmental factor that contribute to it. The most known and influential visualization in this topic is made by Dr. John Snow who tracked Soho deaths due to cholera in 1853 highlighting in a ghost map the water pumps of the area and crossing these data with the close deaths; in this way he could prove how epidemics didn’t spread out by Thames, but by the water contaminated with human waste, thus strongly linking the healthcare question to the environmental one. Today, the healthcare data mapping continues to be very important, especially if connected with other demographic dataset: significative contribution in this regard is the work by the UK Chief Medical Officer that every year publishes an annual report in which there are mapped a huge number of mortality and morbidity, with the goal of offer a clear and objective overview on the national clinic situation.

Maps are a topic widely linked to mobility research, not only for what that concern path, travel indication and signs. The analysis and the visualization of tracked data by individuals, as by companies, can offer a particular reading of the around society. Since 1980, curious is the use of data from the UPS delivery company, which, through the initiative called ORION (On-Road Integrated Optimization and Navigation), started to track its vehicles, monitoring speed, direction, braking, and drive train performance. These data are not only used to monitor daily performance, but to redesign the route structures: this approach allows to reorganize the delivery path optimizing fuel consumption and, consequently, environmental carbon emission.

In the end, if we consider environment as the context, we can not refer to the energy issue, which is today one of the hottest topic, including consumption, discovery and implementation. The growing availability of energy data allows people to determines how they use them defining what is their impact on the environment, also linking these information with other dataset as public transport, technology, production.

2.2 Data visualization collection

In order to better collect, visualize and communicate data, for example as above mentioned, but not only limited at it, the literature reveals a lot of types of graphical representation from specific sectors (such as finance, economics, science or meteorology), but in terms of innovation and experimentation, all those forms can be applied in areas for which they were not designed, offering the expansion of the domains and purposes to which these practices are applied.

There are a lot of research which try to find the best way to classify graphics. One of the first characteristic of the existing taxonomies of graphs and images is the difference between functional or structural. Functional taxonomies focus on the intended use and purpose of the graphic material. In contrast, structural ones are derived from exemplary learning and focus on the form of the image placing more emphasis on emotions, rather than its content. In general this tendency arise from the distinction between the different experts’s background, the firsts typically focused on statistics, computer science and engineering, while the second ones much more into graphic design and arts.
One of the most common and known example of functional classifications can be found in Edward Tufte. He identify four specific category in which classify graphics: the geographic representation through maps, the time-series, the graphic representation of events and phenomena which develop in space-time and the visualization of relations. (Tufte, 1983)

Also Heer, Bostock and Ogievetesky have put the emphasis on functionality in 2012; they proposed an articulated classification of graphics focusing on the experience of our times, and then paying attention on big data. Specifically, they identified four categories: time series, statistical distributions, maps, hierarchies and networks. (Heer, Bostock e Ogievetesky, 2013).

Different from a functional classification, Lohse et al. (Lohse, 1990; Lohse, 1994) classify visual representations using meaning and similarity between them. They identified six basic categories of visual representations: graphs, tables & time charts, maps & cartograms, diagram, networks, and icons.

In addition to taxonomies, there are a lot of catalog and table that collect the visualization methods. One of the most known book that collected and explain the use of each single type of representation is the manual of Harris (Harris, 1996). Another example is the Periodic Table of Visualization Methods (Lengler, 2007). This kind of classification aims to be less academic and draws on fields such as chemistry for his famous periodic table of elements. The periodic table is an interactive and prototypical example of Ben Shneiderman’s visualization mantra of Overview first, zoom and filter, then details on demand. (Shneiderman, 1996). The visualization methods are categorized in data visualization, information visualization, concept visualization, metaphor visualization, strategy visualization and compound visualization. All graphics are then specified according task and interaction (overview, detail, overview and detail), the cognitive processes (convergent thinking, divergent thinking), and the represented information (structure, process).

Starting from the fundamental taxonomy defined by Tufte and the most common basic classification by Lohse et al., we collected 96 visualization graphics trying to offer a comprehensive collection. As it is possible to see in figure 1, there are many type of graphics, some of these unknown to many people, due to their specific field of use.
Except for particular type of representations, the other ones can be used for different kind of data; nevertheless, it remains essential the right choice of the graphics in order to achieve the graphical excellence which consists of complex ideas communicated with clarity, precision, and efficiency. (Tufte, 1983; Cairo, 2013).

However, the importance of communication and the message that visualization itself should convey bring attention to move on the functions that these representations can perform. In order to allow this process, we identified twelve function to which a visualization have to perform, and we tried to relate each chart to each function defined: text analysis, comparison, timeline, distribution, flows, operation/process, hierarchy, location, probability/choice, proportion, range, relationship.

It’s important to specify that each representation can be generally used to perform many functions, both in different projects and at simultaneously in an only-one visualization. An example can be the word cloud, a representation in which words that appear most frequently are larger and words that appear less frequently smaller, this is normally used for the text analysis, but at the same time it can highlight concepts by using dimension of the words, or put them in relation by space disposition.

3. Context and relations

Nevertheless, the identification of the right representation is only a part of the process. Data on their own do not say anything, they should be placed in context, correlated with each other or with other datasets to identify distributions, sizes and correlations; they have to be sorted and aggregated according to designed criteria.

To do so it becomes essential the analysis of the initial data and their inclusion in the context, properly related to each other and/or with other datasets to identify distributions, sizes and correlations, sorted and aggregated according to criteria to the search.
As Tufte wrote, context is essential to reply to the question “Compared to what?”. In fact, graphics must not quote data out of context and context is essential for graphical integrity. (Tufte, 1983)

Speaking of which, Wurman suggest that one of the main purpose of information representation is to help users avoid “the black hole between data and knowledge”; thanks to the relation with the context, unstructured information (reality and complexity), can be encoded in structured information and then knowledge and insights for a more conscious data driven decision making process, according to the DYKW hierarchies model (Data, Information, Knowledge, Wisdom).

Take into account context means also analyze users interested to the visualization, in order to offer a representation with a complexity level suitable to them and to answer the question “Do you know what it all means?”. In fact, basically there are two factors that influence the process of communication between the designer and the reference users: how the visualization used is well adapted to encode information on the nature of the story that you want to tell, and the background and knowledge of the reader about the argument represented. (Cairo, 2013).

Thus, information visualization is used to clarify and simplify information. It enables exploration of complex data, and can be used as a tool to persuade and convince observers of an idea by making information visible, highlighting the causes and effects of specific choices, comparing the different values and situations, showing the flow of a system and how it changes, analyzing the relations, distributing chaotic data into an ordered structure (Cairo, 2013; Shneiderman, 1996).

The design model used, known as Systemic Design (Bistagnino, 2011), pays attention to the organization, optimization and understanding of every single factor at play focusing at first on user requirements, then highlighting the best conditions and the most interesting facets to work on, while keeping an eye on their mutual relations. The focus moves from the simple sum of many elements towards a better understanding of the links between them and their strength, trying to balance functionality and aesthetics.

4. The role of design

To many people, information graphics are the images used in presentations throughout formal meetings or the graphs used in reports or newspaper articles. Many are used for these purposes; however, for each chart, graph, map, diagram, or table used in a presentation, there are others that are used for what that are called operational purposes. Representations for operational purposes are used by millions of people everyday for improving their efficiency and effectiveness, improving quality, solving problems, planning, teaching, training, monitoring processes, studying the geographic distribution of data, looking for trends and relationships, reviewing the status of projects, developing ideas, writing reports, analyzing census data, studying sales results, and tracking home finances. (Harris, 1996)

However, because of its historical roots in scientific reasoning, in academic research advanced information visualizations is often interpreted and characterized as scientific tools; the focus is therefore directed only to the functional requirements, not paying any attention to the aspects of user experience and graphic aesthetic.

In recent years, given the accessibility to the public of a great number of data sources as open data and environmental report, and the impact of that argument on the communication, the number of designers involved has increased, heavily impacting on the data visualization features. Information visualization is becoming more than a set of scientific tools to understand large data sets, but it is
emerging as a medium in its own right, with a wide range of expressive potential and its goal is to transform data into information and information into insight (Fiorina, 2004).

As in most other design-related fields, information visualization seeks to achieve a balance between the requirements of utility, soundness and attractiveness. Utility corresponds to the classic notions of functionality, usability, usefulness and other quantitative performance measures; these aspects generally define the effectiveness and the efficiency of the visualization. Soundness is concerned with reliability and robustness. Attractiveness refers to the aesthetics aspect: the appeal or beauty of a given solution; aesthetics does not limit itself to the visual form, but also includes aspects such as originality, innovation and user experience. (Moere, 2011)

If we take into account these requirements, the relation between design and information visualization become clear, and also become clear the importance of the design discipline during all the process: in fact, it is not an activity that can be added later.

But we want to underline the importance of the key background focused on sustainability. The goal of any data visualization design is rethink constantly both the workflow and the language in order to increase knowledge and understanding to enabling always more conscious behavior. It follows the importance of a network of actors involved in the project; networking is, in fact, considered essential for the growth of an ecosystem because of cooperation and inclusion processes help optimally managing the project and the goal pursuit.

5. Conclusions

Today, an increasing number of organization and corporation, as well as single users or public administrations, are realizing that volume, velocity and variety of data require always more new application. More than technology, though, they should adopt a different mind-set based upon data discovery and exploration; the visualization itself should be seen as a technology (Cairo, 2013) as an extension of ourselves. A good project has two main goals: it present informations and it allows user to explore and discover them; in other words data visualization is a tool for the designer to communicate with users and an instrument for users to analyze the reality presented.

In this way the role of the data visualization is to activate the attention and analysis process and generate order before people’s brain try to do it. Thus, the visualization becomes a medium for increasing cognitive perception of the beholder, easing reasoning and storing of the information represented, showing patterns and relationships, known or not, maybe not easily visible without the aid of a visual representation of information.

On the role of the design is important to remember that the function constraints the form and that the graphical elegance is often found in simplicity of design and complexity of data; graphics should not simplify message. They should clarify them, highlight trend, discover pattern and show hidden reality.

The postmodern personality is fluid, complex and dynamic, and the needs of the people are always new; the different identities have different approaches to technology, communication and information. For these reasons, it becomes highly interesting to give the possibility of obtaining results by ensuring the personalization experience, with the aim of satisfying the different needs and driving the user to repeat his behavior.

In this context, information visualization can be a valuable tool to improve communication, to offer a higher level of information, but even to allow users a personalized path. All this can be applied to different contexts coming to assume the role of cultural analysis tool for discovering and
understanding data, decoding the complexity of contemporary society and abilitate always more new sustainable and innovative practices.
