## Organisers

DRS Special Interest Group in Design Pedagogy (PedSIG)  
METU Department of Industrial Design

## Supporting Institutions

## Sponsors

B/S/H/

nurus

## Conference Co-chairs

Dr. Naz A.G.Z. Börekçi  
Dr. Fatma Korkut  
D.F.A. Dalsu Özgen Koçyıldırım

## Programme Committee

Naz A.G.Z. Börekçi (Dr., Middle East Technical University, Turkey)  
Fatma Korkut (Dr., Middle East Technical University, Turkey)  
Dalsu Özgen Koçyıldırım (D.F.A., Middle East Technical University, Turkey)  
Derek Jones (The Open University, UK)  
Gülay Hasdoğan (Prof. Dr., Middle East Technical University, Turkey)  
Peter Lloyd (Prof., University of Brighton, UK)  
Gary Pritchard (Dr., Ravensbourne University London, UK)  
Liv Merete Nielsen (Prof., Oslo Metropolitan University, Norway)

## Administrative Team

Mehmet Ali Cevrem (ODTÜ Prof. Dr. Mustafa N. Parlar Eğitim ve Araştırma Vakfı)  
Tülay Yıldız (METU Campus accommodation)

## Conference Visual Identity Design

Dalsu Özgen Koçyıldırım

## Editorial Support Team

Alper Karadoğaner  
Başak Topal

## Visual Communication Support Team

İsmail Yavuz Paksoy  
Ümit Bayırlı

## Conference Support Team

Yaşar Egemen Ada  
Melis Dursun  
Merve Erman  
Ayşe Kaplan  
Havva Bilge Koyun

Mert Kulaksız  
Mehmet Erdi Özgürlük  
İsmail Yavuz Paksoy  
Aslıhan Tokat  
Sıla Umulu

Zeynep Yalman  
Zeliha Didem Yanpar Uzun  
Zeynep Yılmaz  
Sezen Yüksel

## International Board of Reviewers

Dilek Akbulut, Gazi University, Turkey  
Katerina Alexiou, The Open University, UK  
L.N. Ece Arıburun Kırca, İstanbul Technical University, Turkey  
Mehmet Asatekin, Bahçeşehir University, Turkey  
Stephen Awoniyi, Texas State University, USA  
Hümanur Bağlı, İstanbul Şehir University, Turkey  
Yekta Bakırlıoğlu, University of Limerick, Ireland  
Giovanni Baule, Politecnico di Milano, Italy  
Ali Emre Berkman, TOBB University of Economics and Technology, Turkey  
Cana Bilsel, Middle East Technical University, Turkey  
Luigi Bistagnino, Politecnico di Torino, Italy  
Stella Boess, Delft University of Technology, Netherlands  
Erik Bohemia, Loughborough University London, UK  
Naz A.G.Z. Börekçi, Middle East Technical University, Turkey  
Charlie Breindahl, University of Copenhagen, Denmark  
Patricia Brien, Bath Spa University, UK  
Valeria Bucchetti, Politecnico di Milano, Italy  
Lyndon Buck, Buckinghamshire New University, UK  
Ece Canlı, Decolonising Design Group, Portugal  
Elena Caratti, Politecnico di Milano, Italy  
Franziska Conrad, Arts University Bournemouth, UK  
Aykut Coşkun, Koç University, Turkey  
Ayşe E. Coşkun Orlandi, Kadir Has University, Turkey  
Fusun Curaoğlu, Eskişehir Technical University, Turkey  
Adam de Eyto, University of Limerick, Ireland  
Juan Alfonso de la Rosa, National University of Colombia, Colombia; University of Illinois, USA  
Ö. Osman Demirbaş, İzmir University of Economics, Turkey  
Oya Demirbilek, University of New South Wales, Australia  
Gerry Derksen, Winthrop University, USA  
Renk Dimli Oraklıbel, Bahçeşehir University, Turkey  
Alpay Er, Özyeğin University, Turkey  
Özlem Er, İstanbul Bilgi University, Turkey  
Guita Farivarsadri, Eastern Mediterranean University, North Cyprus  
Marinella Ferrara, Politecnico Di Milano, Italy  
Tom Fisher, Nottingham Trent University, UK  
Elena Maria Formia, Università di Bologna, Italy  
Aija Freimane, Art Academy of Latvia, Latvia  
Camilo Ayala Garcia, Universidad de los Andes, Colombia  
İdil Gaziulusoy, Aalto University, Finland  
Koray Gelmez, İstanbul Technical University, Turkey  
Colin M. Gray, Purdue University, USA  
Wyn Griffiths, Middlesex University, UK  
Selin Gürdere, Middle East Technical University, Turkey  
Ian Gwilt, University of South Australia, Australia  
Gülây Hasdoğın, Middle East Technical University, Turkey  
Pablo Hermansen, Pontificia Universidad Católica de Chile, Chile  
Dilek Hocaoğlu, Gebze Technical University, Turkey  
Georgina Holden, The Open University, UK  
Roberto Iñiguez Flores, Tecnológico de Monterrey, Mexico  
Ali Oğulcan İlhan, Özyeğin University, Turkey  
Wolfgang Jonas, Braunschweig University of Art, Germany  
Derek Jones, The Open University, UK  
Guy Julier, Aalto University, Finland  
Engin Kapkın, Eskişehir Technical University, Turkey  
Elvin Karana, Delft University of Technology, Netherlands  
Çiğdem Kaya Pazarbaşı, İstanbul Technical University, Turkey  
Harun Kaygan, Middle East Technical University, Turkey  
Pınar Kaygan, Middle East Technical University, Turkey  
Tiphaine Kazi-Tani, Ecole Supérieure d'Art et Design Saint-Etienne, France  
Lindsay Keith, University of Greenwich, UK  
Mahmoud Keshavarz, Uppsala University, Sweden

Julia Keyte, Bath School of Art and Design, UK  
Louise Kiernan, University Limerick, Ireland  
Fatma Korkut, Middle East Technical University, Turkey  
Busayawan Lam, Brunel University London, UK  
Peter Lloyd, Delft University of Technology, Netherlands  
Wei Leong Loh, Kyushu University, Japan  
Nicole Lotz, The Open University, UK  
Anastasios Maragiannis, University of Greenwich, UK  
Muireann McMahon, University of Limerick, Ireland  
Paola Menzardi, Politecnico di Torino, Italy  
Nicola Morelli, Aalborg University, Denmark  
Liv Merete Nielsen, Oslo Metropolitan University, Norway  
Dilruba Oğur, Middle East Technical University, Turkey  
Charlotte Oude Alink, University of Twente, The Netherlands  
Işıl Oygür İlhan, Özyeğin University, Turkey  
Ezgi Ozan Avcı, Yaşar University, Turkey  
A. Can Özcan, Izmir University of Economics, Turkey  
Dalsu Özgen Koçyıldırım, Middle East Technical University, Turkey  
Nazlı Özkan, Linköping University, Sweden  
Aydın Öztoprak, TOBB University of Economics and Technology, Turkey  
Owain Pedgley, Middle East Technical University, Turkey  
Pier Paolo Peruccio, Politecnico di Torino, Italy  
Vesna Popovic, Queensland University of Technology, Australia  
Gary Pritchard, Ravensbourne University London, UK  
Marco Quaggiotto, Politecnico di Milano, Italy  
Byron Qually, The Open University, South Africa  
Charles Ranscombe, Swinburne University of Technology, Australia  
Michael Renner, The Basel School of Design, Switzerland  
Dina Riccò, Politecnico di Milano, Italy  
Valentina Rognoli, Politecnico di Milano, Italy  
Stanley Ruecker, University of Illinois, USA  
Tomás Sanchez Criado, Humboldt University of Berlin, Germany  
Alessandra Savina, Politecnico di Torino, Italy  
Zhabiz Shafieyoun, University of Illinois, USA  
Liliana Soares, University of Lisbon, Portugal  
Ricardo Sosa, Auckland University of Technology, New Zealand; Monash University, Australia  
Kay Stables, Goldsmiths, University of London, UK  
Asa Stahl, Linnaeus University, Sweden  
Michal Stefanowski, Academy of Fine Arts in Warsaw, Poland  
Bahar Şener-Pedgley, Middle East Technical University, Turkey  
Yasuko Takayama, Shizuoka University of Art and Culture, Japan  
Şule Taşlı Pektaş, Başkent University, Turkey  
Andres Tellez, Universidad Jorge Tadeo Lozano, Colombia  
Elçin Tezel, Bahçeşehir University, Turkey  
Şebnem Timur Öğüt, İstanbul Technical University, Turkey  
Martin Tironi, Pontificia Universidad Católica de Chile, Chile  
Gülşen Töre Yargın, Middle East Technical University, Turkey  
Ahmet Zeki Turan, Mimar Sinan Fine Arts University, Turkey  
Gülname Turan, İstanbul Technical University, Turkey  
Canan E. Ünlü, TED University, Turkey  
Louise Valentine, University of Dundee, UK  
Nicholas Vanderschantz, University of Waikato, New Zealand  
Maurizio Vrenna, Politecnico di Torino, Italy  
Renee Wever, Linköping University, Sweden  
Anne-Marie Willis, Studio at the Edge of the World, Tasmania  
Artemis Yagou, Deutsches Museum Munich, Germany  
Theodore Zamenopoulos, The Open University, UK  
Salvatore Zingale, Politecnico di Milano, Italy

## Track Chairs

Henri Achten, Czech Technical University in Prague, Czechia  
Dilek Akbulut, Gazi University, Turkey  
Yekta Bakırlıođlu, University of Limerick, Ireland  
Giovanni Baule, Politecnico di Milano, Italy  
Elena Caratti, Politecnico di Milano, Italy  
Gerry Derksen, Winthrop University, USA  
Çađla Dođan, Middle East Technical University, Turkey  
Wyn Griffiths, Middlesex University, UK  
Aslı Günay, Middle East Technical University, Turkey  
Selin Gürdere, Middle East Technical University, Turkey  
Gülşen Hasdođan, Middle East Technical University, Turkey  
Pablo Hermansen, Pontificia Universidad Católica de Chile, Chile  
Derek Jones, The Open University, UK  
Guy Julier, Aalto University, Finland  
Engin Kapkın, Eskişehir Technical University, Turkey  
Elvin Karana, Delft University of Technology, Netherlands  
Çiđdem Kaya Pazarbaşı, İstanbul Technical University, Turkey  
Harun Kaygan, Middle East Technical University, Turkey  
Lindsay Keith, University of Greenwich, UK  
Julia Keyte, Bath School of Art and Design, UK  
Nicole Lotz, The Open University, UK  
Paola Menzardi, Politecnico di Torino, Italy  
Dilruba Ođur, Middle East Technical University, Turkey  
A. Can Özcan, İzmir University of Economics, Turkey  
Owain Pedgley, Middle East Technical University, Turkey  
Pier Paolo Peruccio, Politecnico di Torino, Italy  
Michael Renner, FHNW Academy of Art and Design, Switzerland  
Valentina Rognoli, Politecnico di Milano, Italy  
Stanley Ruecker, University of Illinois, USA  
Ayşen Savaş, Middle East Technical University, Turkey  
Felix Sattler, Humboldt University, Germany  
Alessandra Savina, Politecnico di Torino, Italy  
Zhabiz Shafieyoun, University of Illinois, USA  
Åsa Stahl, Linnaeus University, Sweden  
Sedef Süner, TED University, Turkey  
Yasuko Takayama, Shizuoka University of Art and Culture, Japan  
Şule Taşlı Pektaş, Başkent University, Turkey  
Martín Tironi, Pontificia Universidad Católica de Chile, Chile  
Gülşen Töre Yargın, Middle East Technical University, Turkey  
Senem Turhan, Middle East Technical University, Turkey  
Maurizio Vrenna, Politecnico di Torino, Italy  
Anne-Marie Willis, Studio at the Edge of the World, Tasmania

## Keynotes

Zeynep Çelik Alexander, Columbia University, USA  
Halime Demirkan, Bilkent University, Turkey  
Gabriela Goldschmidt, Technion, Israel Institute of Technology, Israel

## PhD Pit-Stop Short Lecturers

Gülşen Hasdođan, Middle East Technical University, Turkey  
Peter Lloyd, Delft University of Technology, Turkey  
Owain Pedgley, Middle East Technical University, Turkey  
Gülşen Töre Yargın, Middle East Technical University, Turkey

### PhD Pit-Stop Mentors

Yasemin Afacan, Bilkent University, Turkey  
Gülşen Hasdoğru, Middle East Technical University, Turkey  
Derek Jones, The Open University, UK  
Harun Kaygan, Middle East Technical University, Turkey  
Peter Lloyd, Delft University of Technology, Netherlands  
Owain Pedgley, Middle East Technical University, Turkey  
Bahar Şener Pedgley, Middle East Technical University, Turkey  
Gülşen Töre Yargın, Middle East Technical University, Turkey

### Organisers of Conference Workshops

Yekta Bakırlıođlu, University of Limerick, Ireland  
Aykut Coşkun, Koç University, Turkey  
Emre Çağlar, Middle East Technical University, Turkey  
Çağla Doğan, Middle East Technical University, Turkey  
Alper Karadoğru, Middle East Technical University, Turkey  
Dilruba Ođur, Middle East Technical University, Turkey  
Dalsu Özgen Koçyıldırım, Middle East Technical University, Turkey  
Alon Razgour  
Nagihan Tuna, Middle East Technical University, Turkey  
Senem Turhan, Middle East Technical University, Turkey  
Ece Yalım, Ece Yalım Design Studio, Turkey

### Design Pedagogy for Future Generations Panelists

Derek Jones (Moderator), The Open University, UK  
İpek Akpınar, İstanbul Technical University, Turkey  
Aykut Coşkun, Koç University, Turkey  
Emre Çağlar, Middle East Technical University, Turkey  
Stanley Ruecker, University of Illinois, USA  
Yasuko Takayama, Shizuoka University of Art and Culture, Japan

### Session Chairs

Dilek Akbulut	Engin Kapkın	Alessandra Savina
Hümanur Bağlı	Çiğdem Kaya Pazarbaşı	Zhabiz Shafieyoun
Yekta Bakırlıođlu	Harun Kaygan	Michal Stefanowski
Elena Caratti	Paloma Lopez Grüninger	Sedef Süner-Pla-Cerda
Gerry Derksen	Nicole Lotz	Yasuko Takayama
Çağla Doğan	Paola Menzardi	Şebnem Timur
Wyn Griffiths	Dilruba Ođur	Gülşen Töre Yargın
Gülşen Hasdoğru	A. Can. Özcan	Senem Turhan
Pablo Hermansen	Owain Pedgley	Maurizio Vrenna
Clive Hilton	Gary Pritchard	
Derek Jones	Stanley Ruecker	

## Table of Contents

Editorial .....	XV
Keynotes.....	xvii
Conference Tracks .....	xxi
PhD Pit-Stop Track.....	xxxv

### Part I. Conference Papers

#### Section 1. Approaches and Attitudes

Reimagining the Future of Design Education: Nurturing Mindsets and Skillsets in Students Gary Michael PRITCHARD, Lawrence ZEEGEN .....	5
Transdisciplinary Knowledge: A Systemic Approach to Design Education Pier Paolo PERUCCIO, Paola MENZARDI, Maurizio VRENNA .....	17
Metacognition in the Wild: Metacognitive Studies in Design Education Juanita GONZALEZ TOBON, F. Andres TELLEZ BOHORQUEZ, Oscar Eugenio TAMAYO ALZATE .....	25
Exploring the Motives behind the Formations of Recently Established Industrial Design Programs in Turkey Ilgım EROĞLU, Deniz EKMEKÇİOĞLU .....	37
Competency Domains for Systemic Design Education Seda DUMAN, Şebnem TİMUR ÖĞÜT .....	47
Application of QFD and AHP in Curriculum Planning of Industrial Design Education Xing-Min LIN, Chun-Heng HO, Lu-Ting XIA .....	57
Qualities of Design Briefs for Studio Learning Ricardo SOSA .....	69
Motivation Intended to Inform Design Teaching Practice Ivan Mota SANTOS, Sebastiana L. de Bragança LANA .....	77
Interactive Imagery and Shared Mental Models in Design Learning Gizem YAZICI, Fehmi DOĞAN .....	89
Material Education in Design: From Literature Review to Rethinking Ziyu ZHOU, Valentina ROGNOLI .....	111
A UX Pedagogy on Multimodal Aspects of Emotions Parisa MORADI, Amabel HUNTING, Ricardo SOSA .....	121
Quantifying Design for User Experience Assignments: Using Rubrics as Assessment Tools Armağan KARAHANOĞLU, Charlotte OUDE ALINK, Yekta BAKIRLIOĞLU.....	131
UX Modelling in Design Education: Methods, Processes and Examples Gülşen TÖRE YARGIN, Aslı GÜNAY, Sedef SÜNER-PLA-CERDÀ .....	139
Teaching (with) Empathy and Creativity in Design Ricardo SOSA .....	153
Representation and Context Based Studio Design Process: Articulating a City (Istanbul) İpek AKPINAR, Canan GANIÇ .....	161

Accelerating Students' Capability in Design for Interaction Bahar ŞENER, Owain PEDGLEY .....	171
Teaching the Critical Role of Designers in the Data Society: The DensityDesign Approach Michele MAURI, Gabriele COLOMBO, Ángeles BRIONES, Paolo CIUCCARELLI .....	183
Transition from Basic Design to Product Design: A New Practical Basis Dilek AKBULUT, Ebru GEDİK, Hatice KESDİ, Atakan BAŞ.....	197
Contemporary Art for Product Design Studio: Informed Conceptualism Çiğdem KAYA PAZARBAŞI .....	205
Motivational Factors for Participation in Industrial Design Competition Bao-Yi ZHANG, Min-Yuan MA.....	213
Participatory Design Methodology in Design Competition Practice Lung-Chieh CHAO, Wen-Chih CHANG, Chien-Hsiung CHEN .....	223
<b>Section 2. Educational Milieu</b>	
Tacit Learning in an Extended Interior Design Studio Aruna Venkatesh, Henry Ma .....	237
Educating Designers in Virtual Space: A Description of Hybrid Studios Andreas Ken LANIG.....	247
Virtual Learning Spaces: Designing Learning and Learning to Design Ahu YOLAÇ.....	257
OpenDesignStudio: Virtual Studio Development over a Decade Nicole LOTZ, Derek JONES, Georgy HOLDEN .....	267
The Evolution of the Design Studio: Hybrid Learning Spaces Clive HILTON.....	281
Dichotomous Tension: A Route for Self-Discovery in Architectural Pedagogy Ramy BAKIR, Amr ABDEL KAWI .....	291
The Outcomes of Collaborative Learning in Design Studio Courses Dilek HOCAOĞLU, Saliha TÜRKMENOĞLU BERKAN.....	303
An Ethnography of the Design Studio: Exploring Social Interactions and Performances in Studio Environment through Goffman's Dramaturgical Approach Süleyman Enes KARABULUT, Özge MERZALI ÇELİKOĞLU .....	313
Exploring the Ongoing Diversity Issues Embedded in Product Design Gary UNDERWOOD, Franziska CONRAD.....	321
Industrial Design Students' Reflections on Cross-Institutional and Distance Collaboration Pınar KAYGAN, İrem DİLEK, Harun KAYGAN .....	331
How Inquiries into Craft Generate New Avenues for Multicultural Collaborations in Design Bettina MINDER, Shilpa DAS, Praveen NAHAR, Karina KAINDL, Sabine JUNGINGER .....	339
Crossing the Finish Line Together: Collaborative Team Learning in Design Studios Zhengping LIOW .....	347
Forget to Clean-Up When You're Done Milena RADZIKOWSKA, Stan RUECKER, Jennifer ROBERTS-SMITH .....	361

University Classroom Prototypes for Innovative Learning Luisa COLLINA, Giulia GEROSA, Andrea MANCIARACINA, Martina MAZZARELLO, Francesco VERGANI .....	375
<b>Section 3. Tools and Methods</b>	
Nature as a Framework for Teaching Design Inna ALESINA .....	387
A Study on the Visual Thinking in the Sketching of Product Design Chun-Heng HO, Hang-Qing ZHANG .....	399
A New Approach in Design Learning: Childhood Pretense Derya GÜRCAN, Deniz LEBLEBİCİ BASAR .....	409
Making the Students of Interior Architecture Design Seating Furniture Seçil ŞATIR .....	419
Project Process Cards: A Self-Evaluation Tool for Design Studio Mert TOSUN, Aydın ÖZTOPRAK, Ali Emre BERKMAN .....	431
Using a Self-Reporting Tool to Capture Design Student's Experience Nur FINDIK ÖNAL, Bahar ŞENER .....	439
Visualisation Method Toolkit: A Shared Vocabulary to Face Complexity Chiara L. REMONDINO, Paolo TAMBORRINI, Wouter MEYS .....	453
When Rabbits Lead to Ideas: Inspiring Design by Retelling Stories through Metaphors Özge MERZALI ÇELİKOĞLU .....	461
Cast Away: A New Way to Read Value of Objects in the Context of a Movie Hümanur BAĞLI .....	469
Translational Aspects of Basic Design Exercises Michael RENNEN, Sarah KLEIN.....	477
Upside Down: A Flipped Design Thinking Course Can GÜVENİR, Sevi MERTER, H. Hümanur BAĞLI .....	487
Repurposing Online Videos for Exploratory Design Research Gizem Hediye EREN, Fatma KORKUT.....	499
An In-between Ludic Approach for UX Research: A Case Study Martina SCIANNAMÈ, Davide SPALLAZZO, Mauro CECONELLO .....	511
Rapid Development of Materials Experience through Active Learning Owain PEDGLEY .....	521
Multi-Attribute Material Information Platform Indji SELIM, Ana M. LAZAREVSKA, Tatjana KANDIKJAN, Sofija SIDORENKO .....	531
Educational Tools to Teach Design Students the Dynamic Behaviours of Smart Materials Agnese PISELLI, Sara COLOMBO, Jenny FAUCHEU, David DELAFOSSE, Barbara DEL CURTO .....	543
Nurturing Competence on Innovative Materials through New Media: The Case Study of Public Engagement of MATto, The Material Library of Politecnico di Torino Doriana DAL PALÙ, Valentina CORAGLIA, Beatrice LERMA, Claudia DE GIORGI .....	555

The NautICS Materials Workshop: Teaching and Learning Interactive, Connected and Smart Materials for Yacht Design Stefano PARISI, Arianna BIONDA, Andrea RATTI, Valentina ROGNOLI.....	565
<b>Section 4. Making and Prototyping</b>	
Impossible Design: Fostering Creativity by Quick and Dirty Prototyping Gabriela GOMEZ, Ricardo LOPEZ-LEON.....	581
Bundles of Spatial Ingredients: Designing Through the Prototype Barbara DI PRETE, Fiamma Colette INVERNIZZI, Emilio LONARDO, Martina SCIANNAMÈ.....	589
Why Design Students Need Application Programming Interfaces (APIs) Mahshid FARZINFAR, Stanley RUECKER.....	599
Game-Design-Driven Knowledge: When Prototypes Unpack and Reframe Conventions Ilaria MARIANI, Davide SPALLAZZO.....	607
Prototyping a New Economy Gerry DERKSEN, Zhabiz SHAFIEYOUN, Stan RUECKER.....	617
Teaching Wearables Petra AHDE-DEAL, Mette LAIER HENRIKSEN.....	625
A Gestalt Approach to Teaching and Learning by Prototyping Mauro CECANELLO, James POSTELL, Martina SCIANNAMÈ.....	635
From Observing Beans to Serving the Elderly: Prototyping Medication Administration for the Elderly in Hong Kong Brian Sze Hang KWOK.....	645
Progressive Prototyping for the Design of Spatial-Number Sense Tools Ekta SURENDER, Koumudi PATIL.....	655
An Exploratory Study for Provocative Prototypes: Creating Personas Nagihan TUNA, Emre ÇAĞLAR.....	671
Design for the Nonhuman Aaron BRAKKE, Susan LIEPERT, Stan RUECKER.....	681
Using Cat-Centred Research to Learn the Design Thinking Process Rachel SWITZKY, Rebecca SWEENEY.....	693
Learning Fashion Outside Academia: From Sewing Circles to Maker Spaces Gözde GÖNCÜ-BERK, Sasha WALLINGER.....	709
A Design Course for Craftspeople in İstanbul Aslı Kıyak İNGİN, Ayşenaz TOKER.....	719
Education, Motivation, Maker Practice: The Case of Woodworking Gökçe DENİZ, Dilek AKBULUT.....	735
Rehashing Design through Evolutionary Computation Miguel MONTIEL, Ricardo SOSA.....	745
Computational Design Tools and Education: The Smartgeometry Case Öykü ACICAN, İpek GÜRSEL DİNO.....	753
Mediating Cultural Values in a Multimedia Installation Mauro CECANELLO, Davide SPALLAZZO.....	761

## Section 5. Social Contexts and Sustainability

Design Education for Rural Revitalization Yi-ping CAO, Tie Ji, Ming-fang ZHONG.....	773
Towards Community Centric Design in Cairo Informal Areas Jomana G. ATTIA, Alaa EL ANSSARY .....	783
Familiar Strangers: Enhancing Underground Travel Experience through Digital Screens Güler AKDUMAN, Yumna MOHAMMED ALI.....	793
Learning Through Industry-University Collaboration: Observation of Product Innovation Cases Targeting Low-Income Communities Hande IŞIK TOSUN .....	803
Facing a Phytosanitary Emergency through Transdisciplinary Approach of Systemic Design Alessandra SAVINA, Pier Paolo PERUCCIO .....	815
Taking the Culture out of the Lab and Into the Office: A “Non-Lab” Approach to Public Service Transformation Ryan HUM, Paul THIBAudeau .....	825
Intersemiotic Translation in Intercultural Communication Design Shaima ELBARDAWIL.....	837
Behavioural Change for Efficient Usage of Electricity at Homes Engin KAPKIN, Sharon JOINES.....	851
Self-Organization for Design Education: A Sustainable Flocking System Nariman LOTFI.....	867
How Industrial Design Students Approach Service Design Projects Deniz SAYAR .....	879
Integrating Repair into Product Design Education: Insights on Repair, Design and Sustainability Nazlı ÖZKAN, Renee WEVER.....	891
Using Problem-Based Learning in Sustainable Design Education Yasemin AFACAN.....	903
Asking the Industry Partners: Reflecting on the Value of Internships for Circular Design Muireann McMAHON, Yekta BAKIRLIOĞLU .....	913
Studio-Sustain Urla-Barbaros: A Design Studio Course on Sustainability Simge GÖKSOY, Aslı KIYAK İNGİN .....	923

## Part II. PhD Pit-Stop Short Papers

An Inquiry into Architectural Space in Computational Design Practice Kadir ÖZTÜRK .....	939
A Creative and Innovative Design Approach to a Traditional Cuisine - A Comparative Analysis of Turkish Cuisine (Developing A Conceptual Model of Culinary Design Thinking) Sedef YÜCEL.....	945
How Does the Process of Industry 4.0 Change the Job of a Carpenter? Wolfgang SCHWARZMANN .....	949

Products as Mediating Entities in a Connected World Fazıl AKIN .....	953
A New Approach in Design Learning - Childhood Pretense Derya GÜRCAN .....	957
Exploration of Interactive Data Visualization from the Design Perspective Duygu BEYKAL İZ .....	961
Material Education in Design Ziyu Zhou .....	965
An In-Depth Inquiry of Student Happiness in Spatial Design Education Sıla Su YANAR .....	969
Self-Regulated Learning in Industrial Design Studio Aysun ATEŞ AKDENİZ .....	973
An Evaluation of Interior Design Education Learning Outcomes in Turkey through the Contents of Design Project Courses Özlem KURT ÇAVUŞ .....	979
A Holistic Outcome-based Approach to Design Healthcare Systems Irma Cecilia LANDA-AVILA .....	983
Co-Developing STEM Activities by Using a Design Thinking Approach Ahsen ÖZTÜRK .....	989
Co-Designing Gift in respect to Local Skills and Knowledge Milad HAJIAMIRI .....	993
Involving Users in the Development Process of Social Robots Yasemin DÖNMEZ .....	999
Design Thinking Learning Object Design Can GÜVENİR .....	1003
Facilitation of Design Students' Tacit Knowledge Construction - An Interpretive Research in Interior Design Studios Aruna VENKATESH .....	1007
Design of Spatial Pedagogical Tools for Fostering Number Sense Ekta SURENDER .....	1011
Human-Material Interaction - Examining the Material Agency Concept in Making Processes Bilge Merve AKTAŞ .....	1017
Improving Driver Experience for METU Campus Shuttle Buses Ayça KINIK .....	1023
Material Information Platform for Environmentally Friendly Products Indji SELİM .....	1027
Investigation of the Border as a Space of Becoming - Passages Canan GANIÇ .....	1031
Aesthetics of Ecological Commitment - A Pragmatic Typology Yaprak HAMARAT .....	1035

## Visualisation Method Toolkit: A Shared Vocabulary to Face Complexity

doi: 10.21606/learnxdesign.2019.13039

**Abstract:** With companies, universities, individuals or entire departments, promoting open dialogue, constant interdisciplinary collaboration is a challenge that still meets some resistance. Learning to deal with complexity, with the coexistence of different points of view, learning to work in more heterogeneous teams, in relation to know-how combined in new, sometimes original and challenging formulations, brings particular needs. From the importance of language and a shared vocabulary to the ever-increasing need to work on tools and not just applications, from the constant promotion of collaboration and contamination between different backgrounds and disciplines to the guarantee of a continuous training process through laboratory activities and workshop, this contribution - through the Visualisation Method Toolkit project and its experimentation - investigates the potential of data visualization as a medium to bring design closer to a company's core business as well as support students, institutions and other organizations in communication, both in the analysis and/or scenario phase and in support of dissemination actions towards a more informed quanti/qualitative collective decision making with the aim of enabling new innovative and sustainable good practices.

**Keywords:** data visualisation; workshop; toolkit, communication; sustainability

### 1 Introduction

Delineate and define the meaning of the term big data, means first of all to incorporate a new *forma mentis*. Today, the multifaceted nature of information leads to a real paradigm change: the classic vertical social structures leave room for reticular conformations as well as the birth of ever new relationships with the resulting acceleration of the elaboration and transmission of information (Castells, 2009).

What we are experiencing is a period of "*interregnum*", one of those moments in which the ancient ways of acting no longer work, the lifestyles learned/inherited from the past are no longer adequate to the current *conditio humana*,

This work is licensed under a Creative Commons Attribution-NonCommercial-Share Alike 4.0 International License. <https://creativecommons.org/licenses/by-nc-sa/4.0/>

but still new ways to meet the challenge have not been invented, constructed and implemented (Bauman, 2011). What we are experiencing is a “liquid modernity”, in which the only true constant is the continuous change, and the only true certainty is the uncertainty, the not definitive. However, modern enterprise, as well as the academic world, are still conservative and multidimensional organisational forms, represented by a plurality of actors with often opposed interests and individual positions to defend. In what can be defined as a “solid mentality”, the philosophical focus lies in the determination to control in detail the definition of the future. A closed innovation, which takes a competitive advantage around the issues of control, the hierarchical perspective and competition, declining all those strategies influenced by activities related to the enhancement of human capital, collaboration and sharing. A closed innovation in which the elements remain point-like in a general system if not connected in a broader project that knows how to dialogue with the actions of individuals and the community.

Today, it is widely accepted that innovation is one of the main drivers for companies in order to guarantee sustainable and profitable development over time (Giannopoulou, Yström, Ollila, Fredberg & Elmquist, 2010). On the one hand, the acceleration of the transmission of information carries with it the risk of a non-communication determined by the complexity of the phenomena themselves. On the other hand, if until recently, among the main factors that greatly influenced the processes of innovation there was, for example, the tendency of organisations to deal exclusively with internal results, today this process becomes more and more democratic, enabling new producers of innovation and involving new interlocutors including end users. An increasingly global process, a complex system of relationships between companies, research centres, universities that act locally with a glocal perspective and dimension.

## 2 The Visualisation Method Toolkit

For design or entrepreneurship, for web or marketing, for creativity or for structuring the right discourse, the use of tangible and analogue cards and tools, especially in recent times, is increasingly gaining ground by becoming an integral part of participatory decision-making processes. Whether they are developed by the individual or by large companies, these tools become a valid aid to trigger and support discussions within heterogeneous teams with a view to continuous design research. However, what happens to language when it meets a medium that supports it and inevitably transforms the relationship with the language itself? (McLuhan, 1963).

State of the art, however, does not adequately respond to the academic and business needs dictated by today's information revolution, revolution that brings with it an exponential growth of raw data coming from the most different sources and with an ever-increasing speed. Data that require adequate processing to become information, and therefore knowledge and wisdom (Masud et al., 2010).

Visual representation has always been a transversal cognitive tool based on the natural ability of the human being to perceive the structures of phenomena by organising them formally. So, it is exactly the effectiveness of this technique that ensures more effective memorisation and storage of information (Meirelles, 2013). The use of maps, diagrams, graphs and tables is not new; this type of representation accompanies the course of human evolution by addressing historical changes in different socio-cultural contexts, spaces and the organisation of knowledge on the basis of models increasingly suited to the way we *feed* on information. C. J. Minard, W. Darton, J. Snow, F. Nightingale, D.I. Mendeleev, H. Beck, and W. Playfair are just some of the names among the milestones in the history of visualisation. These figures, sometimes scientists, philosophers, sociologists or engineers, show transversality of this medium, starting from various fields. From managers to employees, from professors to students, passing through the individual citizen, everyone is the protagonist of today's evident and silent revolution that is completely changing the relationship with knowledge.

How can we make our ecosystem more communicative and collaborative by aligning all the protagonists towards a common goal? Born in 2018 from a collaboration between the Innovation Design Lab of the Politecnico di Torino and the Digital Society School of the Amsterdam University of Applied Sciences, the Visualization Method Toolkit (Figure 1) is the third of a series that deals with issues that affect the world of design as well as entrepreneurship. For these reasons and with the aim of helping to face the challenges and the contemporary organisational, social and cultural transformations, the project integrates and accommodates the disciplines of data visualisation and graphic design. The aim is also to provide a basic grammar to deal with the understanding and communication of complex and heterogeneous phenomena, contributing to the construction of a shared understanding of the structure and correlations of the investigated system, the factors that influence it, the triggering causes, the futuristic areas of intervention. The Visualization Method Toolkit is born to become a valid aid to enable sharing and understanding during participated sessions, allowing everyone to bring their own experience and their point of view in the planning creating a real collaborative knowledge, supporting a more informed process decision.

Figure 1. The Visualisation Method Toolkit

## The Project

Research, selection, organisation, simplification of information, standardisation and graphic/functional restitution: these are the main phases of the design process that led to the development of the real kit. A kit that consists of a series of cards that recall the typical gestures of playing cards, enclosed in a sleeve designed ad hoc by laser cutting techniques. To maintain the aesthetic/material continuity of the series, the sleeve of this toolkit is made of felt, but in this case, the choice fell on a particular felt obtained by recycling PET bottles.

### The Cards

A collection of 55 cards. A collection of 55 visual models categorised through different interpretations. A selection of 55 different ways to analyse, explore and communicate quanti/qualitative information. Specifically, it is possible to divide each card into two main operational functions: *select* and *execute*.

The first function, *select*, corresponds with the front of each card and provides all the tricks useful to discriminate the choice of a visual model rather than another, starting from the dataset in possession; specifically, the information is:

- Name and iconographic representation of the visual model;
- Goals of the visualisation, which in this case for all representations corresponds to *communicate*;
- Reference category or *statistic distribution* including Bubble Chart, Chernoff Face and Density plot, *relation* like Arc Diagram and Parallel Set, *comparison* such as Streamgraph, Bar Chart and Glyph Chart, *mapping* as Honeycomb Map and Bubble Map. Treemap, Sunburst Map and Circle Packing instead refer to the category *hierarchies*, *time* represented by examples such as the Condegram Spiral Plot and Timeline, *process* including Flow Chart and Funnel Diagram, to conclude with *text analysis* as in case of the Word Cloud;
- Estimated time for the realisation of the visualisation, both analogical and in a digital version.

The back side of the card, corresponding with the *execute* function, aims to accompany the user step by step in the pragmatic realisation of the visualisation, through:

- A brief description of the visual model;
- Task as a systematic description of all the steps useful for the realisation of the visualisation, from the creation of the Cartesian axes to the right positioning of the elements, from the choice of colours as a means of conveying further variables, to the creation of a clear and explanatory legend;
- Notes on: when it is more appropriate to use the visual model, why use it, the elements to pay particular attention to and therefore the most critical steps, the type of output and possible future developments are finally the recommendations to be taken into account during the development of the visual project.

Using single representations methods such as this can be used to code most different types of datasets. However, beyond single representations, the method can open almost endless dissemination and communication possibilities thanks to the original and creative hybridisation between two or more different views, enabling and perfecting what Tufte defines as *graphic excellence* as the ability to convey complex ideas in a clear, precise and efficient way (Tufte & Graves-Morris, 1983).

### 3 The Workshop: A Continuous Training Process

Workshops, Summer School, Hackathon and Design Challenge, Training, are just a few names and metamorphoses that in recent years and throughout the world, are representing the broader concept of *laboratory* as a moment of extemporaneous experiential learning. "If I listen I forget, if I see I remember, if I do I learn", with these words Confucius identifies in the planning and in the practical realization, the attainment of a higher level of knowledge and learning; mere theoretical awareness finds consolidation in experimentation in the field that becomes the true essence of a concrete and empirical knowledge. The pedagogical, creative, educational and social relevance of the workshop lies in its intrinsic complexity, dynamism and polysemic nature. The presence, as a tutor, of professionals and designers, the active participation, the sharing of ideas and the collective experimentation of new solutions in a short period, are all elements that make the workshops an innovative tool, an educational experience integrating training of employees, managers, students or researchers.

Experiential learning, as defined by John Dewey and Jean Piaget and subsequently deepened thanks to the contribution of the theorist of education David A. Kolb, is a process in which knowledge is created through the transformation of experience. This transformation takes place from concrete experiences, in which learning takes place through the perceptual act and then through the personal interpretation of practical experimentations, or through the understanding of meanings through observation and listening. In a context of experiential learning, students can be asked to visit and organise manual work sessions, experiments in the laboratory, reflect on their experiences, communicate them and share them. By this perspective, learning and teaching are above all a social process, an integral part of daily life, as well as facilitators for the transfer of behaviours, learned in future life and work. Holistic learning, in which the participant learns using all of their learning channels: cognitive, emotional, physical; the more the three are involved in a consistent way, the more the level of experientialness is raised. By integrating this concept with the definition of system, understood as a complex reality whose elements interact with each other, a circular model on the basis of which each element conditions the other and is in turn conditioned, it derives a meaning where each single element it is not to be sought in the element itself but in the system of relations in which it is inserted (Bistagnino, 2009). In this logic, the training system is enriched with new perspectives aimed at creating a logic of interaction, comparison, and constant sharing. The first step to enable conscious design participation with a sustainability perspective is to identify the relationships between the components of the workshop system, ensuring non-hierarchical horizontal communication, flexibility, focus on innovation and personal expression. The enhancement of the quality of relationships is favoured by a horizontal approach with the aim of favouring positive relationships for each participant, integrating where possible expansion of the network of the actors involved with the purpose of strengthening interaction and exchange between the training and social system.

#### The Visualisation Method Toolkit Workshop

The training, conceived as a continuous cycle between acting, evaluating, conceptualising and applying, as an opportunity to expand the present conversation in an inclusive and collaborative way, becomes not only an innovative and technologically sustainable opportunity, but, above all, a social and cultural one. It is precisely the extemporaneous experience that allows the enhancement of the essential function of the toolkit, which goes from being a deck of cards that can also be consulted individually, to a real tool for the project. An experience that in the specific case underlies a specific approach: the Systemic Design. An approach that investigates the behaviour of a complex system not through the simple sum of its constituent components but through the dependence and the strength of the relationships and interactions between them.

The first experimentations of the toolkit took place within the Innovation Design Laboratory and the second level Master in Design for Arts in the Department of Architecture and Design of the Politecnico di Torino. The Innovation Design laboratory is a multidisciplinary training course within the Master Degree in Systemic Design "Aurelio Peccei", which educates students to an innovative and sustainable design starting from a careful analysis of the territory and the reference context. A data-driven design, where the collection, analysis and then the visualisation of data becomes a fundamental part of the design process, as well as an aid to the development of the concept and the project itself. Design for Arts is a structured training / professional program that addresses, through a multidisciplinary approach, the strategic/functional and innovative aspects of creativity in the disciplines of design culture and visual art.

Forty-two students in the first case, eleven in the second, took part in these experiments. Experimentation that has seen the definition of a specific format for the development of the workshop, a structure that sees the consequentiality of the following steps:

1. *Contextualisation*. A fully-fledged introductory overview from the historical and applicative/functional point of view of the data visualisation discipline. A compelling presentation in all those contexts unrelated to the world of data processing, graphics and design.
2. *Introduction to the Visualization Method Toolkit*. An illustration of the project in general, but above all a detailed account of its layout and use.
3. *Reading and analysis of the starting context*. Whether it is a particular dataset, a journalistic article of current affairs, scientific research, an extract of a novel or a statistical report, the starting points may be the most original and different. At a pragmatic level, this phase requires a thorough reading of the starting material with the aim of identifying the possible areas and topics of discussion as well as the possible paths to be undertaken starting from the information present.
4. *Finding the reading key*. Closely related to the previous phase, this moment requires the selection of the identified themes and therefore the actual definition of the starting point around which the visual project will be constructed.
5. *Identification of the message*. Once the key has been identified, to capture the reader's attention it is necessary to identify a message as well as the main narrative and therefore the point of view that will be conveyed by the visualisation (Lupi & Aesch, 2012). This particularly delicate phase will inevitably condition future spatial and chromatic/formal choices as choices that will necessarily have to contribute to the clear transmission of the message.
6. *Data search*. Open data, market research, still newspaper articles or monitoring and observations in the first person. This phase of documentation considers the search for further data useful for the story, of the message previously identified, from the most varied and different sources. To all effects a process of contextualization. A context that becomes an integral and significant part of the main information to be conveyed.
7. *Organization, filtering and creation of the dataset*. This is not a simple list of data. It is precisely at this stage that the assumptions of Systemic Design see an application, both theoretical and practical. All the participants are motivated to see the phenomenon investigated as a complex system of data. A system that sees data as components appropriately selected, organised and filtered on a purely quantitative level as a fundamental input. Input that will find an answer and a value in the visual representation of the system itself and therefore of a qualitative output.
8. *Identification and selection of the visual model*. The choice of the most appropriate form and type of graphic representation to transmit one or more quantities becomes fundamental to bridge the "*black hole between data and knowledge*" (Wurman, 1989). At this point, the participants begin the actual physical exploration of the toolkit. Organising by category, grouping by the number of variables, comparing by similarity, comparing by diversity, deepening with examples or directly verifying the tasks necessary for implementation are just some of the possible strategies and actions that determine or not the choice of a visual model. The choice must necessarily fall on a form that can visually support the information to be communicated. It is not excluded that there may be more valid forms to fulfil this communicative function, not even the possibility of hybridising two or more visual models. (Figure 2).

Figure 2. With the help of the cards, the students begin the search for the right visual model to convey the message.

9. *Playing with data*. Entered into the heart of the workshop, all the participants begin to organise and code their data set according to the selected visual model, as well as experiment and explore the elements involved, such as the composition of the main architecture, number of elements in play, proportions, positions, etc. (Figure 3).

Figure 3. First formal explorations starting from the created dataset.

10. *Playing with shapes, colours and sizes.* Participants are asked to free their creative and original inspiration by looking for the right shapes and the most coherent colours to highlight the internal relationships between the elements. Also, yet to create multiple levels of reading, from general to detail, determining the most appropriate hierarchy in content; continue experimenting by adding all the tangential elements useful for contextualisation as well as supporting numbers and therefore the label, reaching the almost final creation of the actual visualisation. (Figure 4).

Figure 4. Students start playing with shapes, colours, spaces and dimensions.

11. *Simplify, simplify, SIMPLIFY.* "Ornament is a crime" (Miller, Ward, 2002). At this point, all that remains is to stylize, refine and "clean" the visual model from any purely aesthetic and decorative vein, not useful for communicating the message. The goal is not so much to create an aesthetically beautiful visualisation, but rather a visual model functional to the conveyance of the message (Cairo, 2012). Finally, all that remains is to create a clear legend, to guide the reader in understanding information and finding the right title for storytelling.

Although all the phases of the workshop are consequential, they see the possibility of activating continuous iterative processes, in the re-identification of the reading key, in the re-definition of the message, in the search for new data, and above all in the research and experimentation of the right visual model.

### Results

In order to evaluate the effectiveness and validity of the tool and the practical experience in its entirety, the 53 participants were asked to fill out an anonymous questionnaire, whose answers allowed to outline the strengths and weaknesses of the project.

Almost all the participants (99%) expressed a positive opinion about the clarity of the contents contained in the cards, qualifying the Visualization Method Toolkit as intuitive and straightforward. The motivations supporting this figure are the most varied: from graphic immediacy to the degree of detail of the procedures to be performed, to the practicality of use and consultation. The negative opinion recorded prefers the use of a manual or more traditional ways to consult the graphic forms proposed.

When asked what could be the possible measures to improve the actual tool, the ideas were varied and interesting. For example, it has been suggested the insertion of practical and illustrative examples and case studies, whether analogue or digital; to predict a specific order *a priori*; the development of a digital version of the toolkit that offers the possibility on the one hand to consult the instrument on various portable devices and on the other that allows to download the visual models in vector format. Finally, among the future steps, the suggestion to widen the anthology of the visualisations, as well as to implement the project from the linguistic point of view through the multilingual translation of the same, to conclude with the insertion of an ad hoc appendix as an aid to consultation. The same percentages emerged to the question: do you think that the Visualization Method Toolkit is a useful tool for the design process? In particular, the prevailing opinion verifies the potential of the instrument in question as valid support for the communication of data and information, as well as analysis during the whole design process. 46% of the participants responding to the test identified the research phase and scenario like the one that could benefit most, followed by the final communication and presentation of the project to 40%, the concept to 10% and the remaining 4% to the phase of data collection.

The last moment of the survey saw the participants' suggestion, on the possible contexts and sectors of use that could most benefit from this tool: economy, marketing, design, sociology, statistics, journalism, publishing, education to name a few.

## 4 Conclusions

Starting from the design and then from the development, as well as from the subsequent experiential experimentations of the Visualization Method Toolkit, this contribution investigates the importance of creating new tools, practices and processes to facilitate and enable a more agile, collaborative and shared participation.

Deepening the so-called "learning outcome", it is interesting to highlight how contamination processes, multidisciplinary approaches and co-planning can be qualified through the creation of a shared vocabulary, to all effects of a basic grammar made of shapes, colours, symbols, positions and dimensions, for the codification and representation of information.

Representation useful for the recognition of the most diverse variables that influence a problem, an event or a phenomenon, yet the possibility to investigate these variables in a holistic way enabling on the one hand new strategies of intervention, on the other the sharing of decisions and choices among all the actors involved in the design process, creating a sense of community and participation aimed at a real "*interconnected knowledge*" (Celaschi, 2016).

In fact, we are in a phase of total change and transformation. An intrinsically complex, articulated and dynamic reality. A reality characterised by always new perspectives in which the contribution of design renews itself every day, but also and above all the relationship with the world of entrepreneurship, education, communication, becoming synonymous with innovation of processes, services and products, in a specific territory or context of interest. (Yee & All, 2017). Precisely in this scenario, the Visualization Method toolkit is an aid to enable a growing awareness of contemporary complexity, awareness in which design as a cultural catalyst imagines scenarios aimed at greater responsibility, transparency and sustainable innovation.

### About the Authors

**Chiara L. Remondino** holds a MS in Ecodesign and is currently pursuing her PhD at the Politecnico di Torino. Her research is focused on big data, data visualization and sustainability. She obtained a Lagrange ISI Foundation fellowship on interaction in complex system. She co-founded the Innovation Design Lab.

**Paolo Tamborrini** is architect and Associate Professor of Design. Head of the Design School at Politecnico di Torino (Italy); founder and scientific coordinator of the Systemic Innovation Design Network (SyInDe). Editor about innovation design, eco-design and sustainability for the major design magazines.

**Wouter Meys** works as a researcher coordinator at the University of Applied Research in Amsterdam. In the past he worked on projects that focused on open data, intelligent sensory systems and public screens. Currently he is doing research on several projects on participatory mapping and context aware public displays. He has a strong interest in novel information services and citizen empowerment.
