## Events

# Conference *The development of a digital cultural heritage eco-system*

Massimiliano Lo Turco

Following a twenty-year tradition, March in Ferrara is dedicated to the themes of Restoration and Cultural Heritage: three days of conferences, exhibitions, debates and working tables in an event that precedes the contents of the XXVI *Salone del Restauro, dei Musei e delle Imprese Culturali*, this year scheduled on September, 18th, 19th and 20th. In the framework of palazzo Tassoni Estense, numerous moments of discussion were proposed on the themes of restoration, architectural heritage, design, research and governance of the territories, with particular attention to the Emilia territory affected by the seismic events of 2012. The Department of Architecture of the University of Ferrara [1] organized at its headquarters three intense days of discussion and debate, confirming a territorial vocation for innovation and research on cultural heritage. In the full calendar of events a conference by invitation was organized entitled *The development of a digital eco-system of cultural heritage. Methodologies and technologies for the creation of enabling platforms for knowledge, documentation, management and enhancement of cultural heritage*, with the support of UID – Unione Italiana per il Disegno. The event has brought experiences and testimonies on the new role of the disciplines and representation in relation

**Lo sviluppo di un eco-sistema digitale del patrimonio culturale. Metodologie e tecnologie per la realizzazione di piattaforme abilitanti per la conoscenza, documentazione, gestione e valorizzazione del patrimonio culturale**

Le Giornate del Restauro e del Patrimonio culturale sono un'iniziativa di Dipartimento di Architettura dell'Università degli Studi di Ferrara, DIAPReM e LabORA  
In collaborazione con:

A cura di DIAPReM, TekneHub (Dipartimento di Architettura, Università degli Studi di Ferrara) e UID - Unione Italiana Disegno  
Coordinamento scientifico: Prof. Marcello Bazzani, Prof.ssa Federica Maletti (Dipartimento di Architettura, Università degli Studi di Ferrara)

**Programma**

**Introduzione al Convegno**  
Prof.ssa Francesca Fatta, Vice Presidente UID (Dipartimento di Architettura e Territorio, Università Mediterranea di Reggio Calabria)

**Rilevo, documentazione, modellazione semantica.**  
**La Piattaforma INCEPTION**  
Prof. Roberto Di Giulio, Coordinatore del Progetto INCEPTION (Dipartimento di Architettura, Università degli Studi di Ferrara)

**Ecosistemi Digitali e Risorse Culturali**  
Prof. Carlo Bianchini, Prof. Andrea Casale, Prof. Tommaso Empler, Prof.ssa Daniela Esposito, Prof. Carlo Inglese, Prof.ssa Elena Ippoliti, Prof. Alfonso Ippolito, Prof. Luca Ribichini, Prof. Graziano Valenti, Prof. Alessandro Visconti (Dipartimento di Storia, Disegno e Restauro dell'Architettura, Sapienza Università di Roma)

**Piattaforme digitali integrate per i Beni Culturali. Alcune esperienze della Scuola di Architettura del Politecnico di Torino**  
Prof. Massimiliano Lo Turco, Prof.ssa Roberta Spallone (Dipartimento di Architettura e Design, Politecnico di Torino)

**Tecnologie della Conoscenza e Design Esperienziale per il Patrimonio Culturale. Un'applicazione partecipativa per il Museo Cola Filotesio di Amatrice**  
Prof. Giuseppe Amoroso, Prof. Polina Mironenko (Dipartimento di Design, Politecnico di Milano), Dott.ssa Alessandra Peruzzetto (World Monument Fund, New York), Dott. Fernando Salvetti (Logosnet, Houston)

**Casi studio per la conoscenza e valorizzazione. I palazzi Penne e Cassano Ayerbo d'Aragona a Napoli e i parchi reali di Caserta, Versailles, Wroclaw**  
Prof. Massimiliano Campi, Prof.ssa Antonella di Luggo (Dipartimento di Architettura, Università degli Studi di Napoli Federico II)  
Prof.ssa Ornella Zerlenga, Prof. Paolo Giordano (Dipartimento di Architettura e di Disegno Industriale, Università degli Studi della Campania Luigi Vanvitelli)

**Conclusioni**  
Arch. Laura Moro (Direttore IBC Istituto beni culturali, artistici e naturali della Regione Emilia-Romagna)

to digital cultural resources, increasingly widespread and accessible (fig. 2). The complexity of the title contrasts with the lucid and linear reflections with which Marcello Balzani opened the conference, thinking about digital ecosystems, in which the value is represented by the structure of an integrated platform of finalized contents and by different browsing and relationships with users and multiple needs, we imagine

a universe of coherent and compatible objects. Objects that connect, communicate and react, knowing where they are and what they do, and even learn the behaviour that make them more interesting and useful. However, reality is different. If we identify as a galaxy of this ecosystem the one of heritage assets, we can immediately understand a non-trivial antagonistic feature [Balzani 2019, p. 6].

Another topic of reflection concerned the analysis of the procedures for the creation of high quality 3D models, which are still particularly onerous activities in the field of Cultural Heritage. Today, often the products of digital reconstructions are provided in non-interoperable formats, therefore not shareable and difficult to access, where it is necessary an intense work of standardization on acquisition protocols, the critical se-

lection of information and structured processes to set up information models that can be used in different contexts.

This is the scenario of Carlo Bianchini's intervention, according to which Digital Cultural Resources can play a fundamental role both in terms of the preservation of the identity of places and, above all, as a tool oriented towards the management of built heritage [Bianchini et al. 2019, p. 40].

The case studies presented by Antonella di Luggo and Omella Zerlenga can be traced back to the same needs. The first, a research project for palazzo Penne, concerned the development of a methodology of knowledge aimed at the conservation and enhancement of a building of great representativeness, implemented according to a multidisciplinary approach, prefiguring new uses and new devices to improve accessibility and use [Campi, di Luggo 2019, p. 66]. The second concerns specifically the research project for the scale of palazzo Cassano Ayerbo d'Aragona in Naples, but it is part of an even broader project that consists in the development of a methodology of knowledge aimed at the conservation and enhancement of buildings of great representativeness, both architectural and urban, also implemented according to a multi-scalar and interdisciplinary approach [Zerlenga, Cirillo 2019, p. 76].

The following interventions summarized below refer mainly to museum assets: the intervention presented by Giuseppe Amoruso examines the museum of Amatrice – razed to the ground by the earthquake of 2016- which collected

works from the territory of Amatrice and materials on the history of the building and the city of Amatrice. The project aims to represent and disseminate part of the lost heritage through an immersive and interactive system aimed at involving the experience and dissemination of the contents of the Museum in a mode of visual storytelling [Amoruso et al. 2019, p. 90].

The projects presented by Massimiliano Lo Turco and Roberta Spallone define methodologies to create digital models of some museum collections, creating workflows able of virtually reproducing spaces (container-museum) and objects (content-collections). The theme of communication, sharing and dissemination of cultural heritage is addressed through experiments by Artificial Intelligence, Augmented Reality and the use of Web platforms, in the areas of Cultural Tourism (Digital Interactive Baroque Atria) and the enhancement of documentary and archival heritage (Archivio Mollino and Theatrum Sabaudiae) [Lo Turco, Spallone 2019, p. 52].

The implementation of structured processes to improve the documentation, management, enhancement and accessibility of cultural heritage are the main themes of the INCEPTION European Project – Inclusive Cultural Heritage in Europe through 3D semantic modelling, presented by Roberto di Giulio. The project has developed a platform designed to organize and use in an inclusive way three-dimensional models enriched with semantic information. In addition to the innovative methodolo-

gies for the realization of 3D models with an inclusive and interdisciplinary approach to cultural heritage, the popular event was an opportunity to present the open standard platform developed as part of the research project in an exhibition space, which can be visited during the Giornate del Restauro e del Patrimonio Culturale; in a unified framework, through panels and multimedia resources, digital ecosystems were also presented: the works were developed by the Department of History, Design and Restoration of Architecture of the Sapienza Università di Roma; the results obtained by the School of Architecture of the Politecnico di Torino with regard to integrated digital platforms for Cultural Heritage; the participatory application for the Museo Cola Filotesio di Amatrice realized by the Department of Design of the Politecnico di Milano as an experiential design for the knowledge of Cultural Heritage; the palaces Penne and Cassano Ayerbo d'Aragona in Naples and the royal parks of Caserta, Versailles, Worlitz as case studies for knowledge and enhancement developed by the Department of Architecture of the Università di Napoli Federico II and the Department of Architecture and Industrial Design of the Università degli Studi della Campania Luigi Vanvitelli.

The results of the interventions have been published in the number 1/2019 of the scientific magazine Paesaggio Urbano, in a digital version that can be freely downloaded [2].

## Notes

[1] The organizers of the event are the Center for the Development of Integrated Automatic Procedures for Restoration of Monuments (DI-APreM) and the Laboratory of Architectural Restoration – LaboRA of the University of Ferrara.
