<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	xiii
<b>Chapter 4. Exact Solutions for Electromagnetic Impedance Wedges</b> . . . . .	1
4.1. Introduction . . . . .	1
4.2. A list of the impedance wedge problems amenable to exact WH solutions . . . . .	9
4.3. Cases involving classical WH equations. . . . .	10
4.3.1. WH formulation of the diffraction by an impedance half-plane . . . . .	11
4.3.2. Exact solutions of the diffraction by an impedance half-plane . . . . .	18
4.3.3. Exact solution for the full-plane junction at skew incidence . . . . .	37
4.3.4. Exact solution of the penetrable half-plane problem (the jump) . . . . .	39
4.3.5. Exact solution of the right-angled wedge scattering problem . . . . .	40
4.4. Exact solutions for impedance wedge problems with the GWHE form of section 3.5 – form #1 . . . . .	51
4.4.1. The WH solution of the Malyuzhinets problem . . . . .	52
4.4.2. Diffraction at skew incidence ( $\alpha_o \neq 0$ ) by a wedge with a PEC and a PMC face. . . . .	58
4.4.3. Diffraction at skew incidence ( $\alpha_o \neq 0$ ) by a wedge with a PEC face and the other face with diagonal $\mathbf{Z}^b$ with one null element . . . . .	60
4.5. Exact solutions for the impedance wedge problems with the GWHEs written in an alternative form – form #2. . . . .	62
4.5.1. Exact factorization with diagonal polynomial matrices $P_{a,b}(m)$ . . . . .	64
4.5.2. Anisotropic symmetric impedance wedges at normal incidence . . . . .	67
4.5.3. Non-symmetric wedges at normal incidence with commuting $P_a$ and $P_b$ . . . . .	68
4.5.4. Non-symmetric wedges at skew incidence . . . . .	70
4.5.5. Two particular wedge problems amenable to exact solutions . . . . .	72

4.6. A general form of the GWHEs to study the arbitrary face impedance wedges – form #3 . . . . .	76
Appendix 4.A. Some important formulas of decomposition for wedge problems . . . . .	79
<b>Chapter 5. Fredholm Factorization Solutions of GWHEs for the Electromagnetic Impedance Wedges Surrounded by an Isotropic Medium . . . . .</b>	<b>87</b>
5.1. Introduction . . . . .	87
5.2. Generalized Wiener-Hopf equations for the impenetrable wedge scattering problem of an electromagnetic plane wave at skew incidence . . . . .	88
5.3. Fredholm factorization solution in the $\bar{\eta}$ plane of GWHEs . . . . .	92
5.4. Fredholm factorization solution in the $\bar{w}$ plane of GWHEs . . . . .	95
5.5. Approximate solution of FIEs derived from GWHEs . . . . .	97
5.6. Analytic continuation of approximate solutions of GWHEs . . . . .	101
5.7. Far-field computation . . . . .	103
5.8. Criteria for the examples . . . . .	110
5.9. Example 1: Symmetric isotropic impedance wedge at normal incidence with Ez polarization . . . . .	111
5.10. Example 2: Non-symmetric isotropic impedance wedge at normal incidence with Hz polarization and surface wave contribution. . . . .	119
5.11. Example 3: PEC wedge at skew incidence. . . . .	121
5.12. Example 4: Arbitrary impedance half-plane at skew incidence . . . . .	124
5.13. Example 5: Arbitrary impedance wedge at skew incidence . . . . .	126
5.14. Example 6: Arbitrary impedance concave wedge at skew incidence . . . . .	128
5.15. Discussion. . . . .	132
Appendix 5.A. Fredholm properties of the integral equation (5.3.1). . . . .	132
<b>Chapter 6. Diffraction by Penetrable Wedges . . . . .</b>	<b>135</b>
6.1. Introduction . . . . .	135
6.2. GWHEs for the dielectric wedge at normal incidence (Ez-polarization) . . . . .	140
6.3. Reduction of the GWHEs for the dielectric wedge at Ez-polarization to Fredholm integral equations . . . . .	142
6.4. Analytic continuation for the solution of the dielectric wedge at Ez-polarization . . . . .	154
6.5. Some remarks on the Fredholm integral equations (6.3.24), (6.3.26) and numerical solutions . . . . .	159
6.6. Field evaluation in any point of the space . . . . .	162
6.7. The dielectric wedge at skew incidence . . . . .	165
6.8. Criteria for examples of the scattering by a dielectric wedge at normal incidence (Ez-polarization) . . . . .	176

---

6.9. Example: the scattering by a dielectric wedge at normal incidence (Ez-polarization) . . . . .	177
6.10. Discussion. . . . .	186
Appendix 6.A. Fredholm factorization applied to (6.3.2)–(6.3.5) . . . . .	186
Appendix 6.B. Source term $\bar{n}_i(\bar{\eta})$ . . . . .	188
<b>References</b> . . . . .	199
<b>Index</b> . . . . .	205
<b>Summary of Volume 1</b> . . . . .	209
