# Introduction

The Council of EAAE invites you to join us in the beautiful city of Turin for the 2023 Annual Conference and General Assembly, hosted by Politecnico di Torino.

We are all overwhelmed with the enormous frequency and power of the many challenges that we are confronted with, in this time called by some the “anthropocene” – the geochronical era in which humans have become one of the most important factors influencing biological, geological, and atmospheric processes on Earth. Climate change continuing – it seems – unhindered, the Corona pandemic not yet fully overcome (and new pandemics possibly at the doorstep), biodiversity endangered, war and natural disasters, uncanny developments in artificial intelligence with great significance also for the scientific production of knowledge: all these “wicked problems” require immediate solution and powerful action. That is where we stand: in a sliding, rising, sinking, shaking, moving sociocultural landscape.

We, the schools of architecture, planning and design, must prepare our students and through them society for embracing these challenges and many more with competence and determination, researching and designing to bring an immediate as well as a sustained impact for a better living environment. Let’s share all our insights and develop new paths together! What is the core education of architecture, design and urbanism, and interdisciplinarity today and tomorrow?

*Prof. Dr. Oya Atalay Franck*

President EAAE

Dean ZHAW School of Architecture, Design and Civil  
Engineering

The **EAAE** [European Association for Architectural Education] is an international, membership-based Association organizing architectural schools in Europe. Membership is not limited to countries that belong to the European Union, all European countries may participate. The EAAE is a non-profit, Belgian registered organization.

#### **Mission and Objectives**

The purpose of the Association is to advance the quality of architectural education and also to promote the quality of architecture in Europe. The Association provides a forum for generating information on aspects of architectural education and architectural research.

The mission of the Association is to build a network of European schools of architecture, fostering discussions, exchanges and a common policy in Europe to advance the quality of architectural education. The EAAE promotes the interests of member schools as institutions and academic environments.

#### **Member Organizations**

Membership is open to European schools or institutions that provide architectural degree recognized either by the state or by a professional organization administering access to the profession in its country.

# School of Architecture(s)

Architecture as a discipline entangles multiple interactions between the physical world, technology, and the organisation of the cultural and social environment of the profession, but its multidisciplinary character is not the only multi-dimension to be investigated. In the era of post-architecture, moving towards an autonomous subjectivity, opening up the field, and questioning the plurality of the discipline is crucial: not just Architecture but Architecture(s). Furthermore, European Schools of Architecture offer a wide variety of meanings of the term Architecture in their curricula. For all these reasons, it is urgent to discuss a broadening of the term itself to understand the positioning of architectural education in the contemporary global world.

The conference is an invitation to think differently, reflecting upon the context of the discipline to understand the knowledge of the future, focusing on the question: what is Architecture in the age often described as post-architecture?

Considering how antagonist characters polarise human knowledge and that architectural practice is moving towards an autonomous subjectivity, architecture can be understood as a tension between dichotomies leading to a new paradigm: architecture(s).

In this frame, the conference attempts to reason around a contemporary, wider and inclusive definition of architecture by discussing six pairs of antinomian concepts articulated in three parallel sessions: architecture as a method and/or as a discipline; architecture of the Masters and/or of the topics; architecture for architects and/or for the community; architecture as avant-garde and/or market-oriented; architecture inside and/or outside the wall; architecture disciplinary and/or extra-disciplinary.

The six dichotomies are grouped into three main sessions:

Seeds of architecture(s): Ways of Teaching,

Roots of architecture(s): Ways of Research,

Branches of architecture(s): Ways of Practice.

### **Session1. Seeds of architecture: Ways of Teaching**

Architecture as a method and/or as a discipline. Nowadays, there can be a shift in teaching architecture from defining a specific knowledge inside the discipline or a series of methods that can be generalised and exploited for practice.

Architecture of the Masters and/or of the Topics. The masters overlooked the teaching systems before the 20th century; from the Modern Movement onward, the transmission of knowledge is more and more focused on topics related to social and human-centered issues.

In a changing world where global challenges such as climate change, digital innovation or social inequalities are crossing architecture, it is crucial to discuss the possible impact of architectural education in this frame. Different teaching practices question the dichotomies between architecture as a method and/or discipline and between architecture of the Masters and/or of the Topics. The first session explores this issue by referring to one or more of the following possible topics:

Is architecture a discipline characterised by a scientific status that can define the borders of practising and teaching architecture? Or is architecture more of a *modus operandi* that can apply to other fields?

Is architecture a mindset, a set of soft skills, or a technical discipline in which hard skills are the core of transmissible knowledge?

What is the meaning of Masters in architecture nowadays? Can they

have a role in architectural education, and if so, to which extent? How to identify new topics with a pedagogical value for architectural education? Which role can architectural education have in tackling contemporary global challenges? Should architectural education experimentation have a role in identifying new burning issues?

## **Session 2. Roots of Architecture: Ways of Research**

Architecture for architects and/or for the community. Who is the final architecture user, and how is this reflected in practice? Is Architecture a discipline or a service? Both points of view lead to a different definition of Architecture that needs to be translated into teaching. Architecture as avant-garde and/or market-oriented. What is the result? Architecture can be for the market, or architectural schools can open new visions that the market must look at.

The goals and the targets of architectural action are crucial topics for architectural research. While the social and political dimension of architecture is given, architecture is often asked to comply with market requests and economic issues. The multiplicity of meanings of the term architecture leads to several ways of setting up and conducting architectural research.

The second session aims to investigate the dichotomies between architecture 'for architects' and/or for the community and between architecture as avant-garde and/or market-oriented, referring to one or more of the following possible topics:

How can architectural research contribute to orienting the continued expansion of the discipline's knowledge base while structuring interrelationships with other disciplines? How can architecture improve its inherent interdisciplinary dimension while safeguarding its specific identity?

How can architectural research have a tangible social impact, and how can it be made substantial for communities?

What is the role of communities outside academia in architectural research? Are they merely a field of experimentation, or can they be involved in conceiving and structuring the research process?

Should architectural research be focused on contemporary burning issues, or should architecture aim at identifying future topics and challenges crucial for societies?

What are the possible roles of design-based research in fostering theoretical findings and ways of thought?

## **Session 3. Branches of Architecture: Ways of Practice**

Architecture inside and/or outside the wall. Where is the place for the practice? Architecture can be inside the wall or outside of it; it can build the wall itself or be seen as a theoretical application.

Architecture disciplinary and/or extra-disciplinary. What does

architecture have to face? Architecture can look at itself in the realm of the discipline or look at other knowledge: sociology, economics, ethnography are just examples. Which are the potential of both approaches?

Architecture has long ceased to be the expression of a prince's will to become, whether the archi-stars' gesture or the result of a complex process involving many stakeholders and disciplines. In this frame, architecture can seek to define and broaden its specific identity or work to overcome disciplinary boundaries to strengthen collaboration with other professional fields. Besides, contemporary and innovative ways of architecture practice also question the necessary relationship between architecture and constructive matters.

The third session aims to investigate the dichotomies between architecture inside and/or outside the wall and between disciplinary and/or extra-disciplinary approaches to architecture referring to one or more of the following possible topics:

Can we only claim for architecture when artefacts – walls – are the final goal of the design process, or can architecture exist “outside the wall” dealing with processes and outputs unrelated to the built environment?

Should architecture deal with the construction of artefacts and walls, or should architecture deal with non-tangible applications?

Which is the role of academia and design-based research in the panorama of professional practice?

How to set fruitful collaboration between theoretical enquiry on architecture and professional practice routine?

When we speak about multiple ways of practising architecture nowadays, are we broadening the borders of architecture, or are we dealing with other disciplines “outside” architecture?

## **DESIGN INSTITUTES & DESIGN STUDIOS. Cases of permeability between teaching and practice (including research)**

Marco Trisciuglio - Li Bao

The aim of the contribution is describing an urban design teaching activity developed in the last eight years (2016-2023) at one of the top Schools of Architecture in China: the Design Studios “Urban morphology, architectural typology, contemporary settlement patterns” held at the School of Architecture in Southeast University Nanjing, China.

One of the main features of the teaching activity has been the strong connection with the practice activities developed within the Design Institute of the same University, such as the Urban Architectural Lab, founded in 2006 as part of the historic Architects & Engineers Co. Ltd. of the same university.

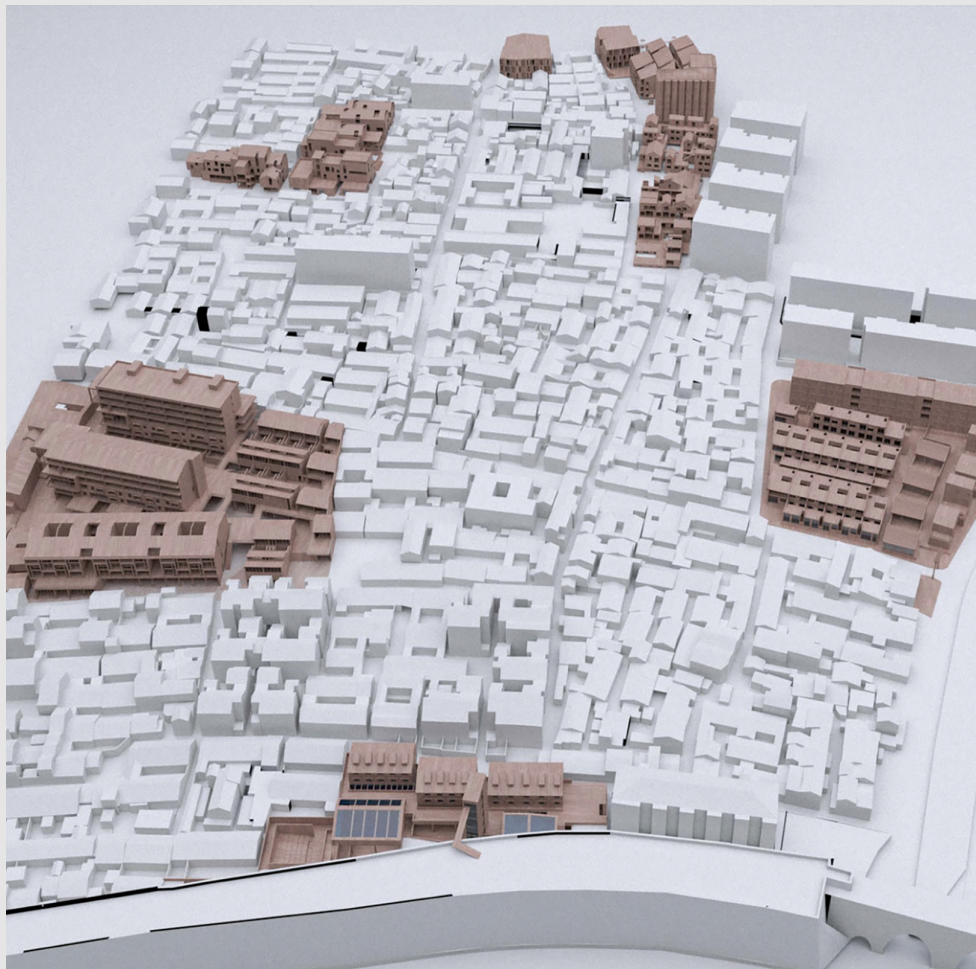

In respect with the European professional context, the role of the Design Institutes is specific of the Chinese context, where those public structures are the legacy of the process of collectivization of the professions promoted during the Fifties. The strategic role of the Design Institutes located in the universities allows nowadays not only high quality in design productions, but also the opportunity for students to face real topics of great complexity and to improve their competencies: in design as well as in socio-economic management.

The contribution describes some urban regeneration projects developed in Nanjing historical urban tissues where the connection between Design Institute and Design Studio was strong and fruitful, from the choice of the topic and the surveys to the exams involving stakeholders within the final jury.

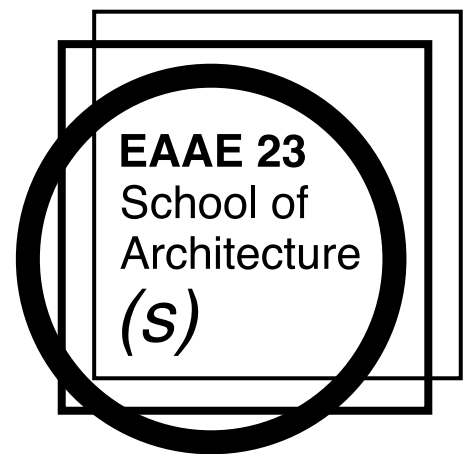

Marco Trisciuglio is Full Professor at Politecnico di Torino where he is Head of the PhD Program “Architecture. History and Project”. He is Distinguished Professor at SEU.

Bao Li is Full Professor and Vice Dean of School of Architecture at Southeast University Nanjing (SEU), awarded by UIA and MoE for Innovation in Architectural Education.
