La Collana accoglie i volumi degli atti dei convegni annuali della Società Scientifica UID - Unione Italiana per il Disegno e gli esiti di incontri, ricerche e simposi di carattere internazionale organizzati nell'ambito delle attività promosse o patrocinate dalla UID. I temi riguardano il Settore Scientifico Disciplinare ICAR/17 Disegno con ambiti di ricerca anche interdisciplinari. I volumi degli atti sono redatti a valle di una call aperta a tutti e con un forte taglio internazionale. I testi sono in italiano o nella lingua madre dell'autore (francese, inglese, portoghese, spagnolo, tedesco) con traduzione integrale in lingua inglese. Il Comitato Scientifico internazionale comprende i membri del Comitato Tecnico Scientifico della UID e numerosi altri docenti stranieri esperti nel campo della Rappresentazione.

I volumi della collana possono essere pubblicati sia a stampa che in open access e tutti i contributi degli autori sono sottoposti a double blind peer review secondo i criteri di valutazione scientifica attualmente normati.

The Series contains the proceedings volumes of the annual conferences of the UID Scientific Society - Unione Italiana per il Disegno and the results of international meetings, researches and symposia organized as part of the activities promoted or sponsored by the UID. The themes concern the Scientific Disciplinary Sector ICAR / 17 Disegno including also interdisciplinary research fields. The volumes of the proceedings are drawn up following an open call and with a strong international focus. The texts are in Italian or in the author's mother tongue (English, French, German, Portuguese, Spanish, ) with full translation into English. The International Scientific Committee includes the members of the Scientific Technical Committee of the UID and numerous other foreign teachers who are experts in the field of graphic representation.

The volumes of the series can be published both in print and in open access and all the contributions of the authors are evaluated by a double blind peer review according to the current scientific evaluation criteria.

## OPEN ACCESS

Il presente volume è pubblicato in open access, ossia il file dell'intero lavoro è liberamente scaricabile dalla piattaforma FrancoAngeli Open Access (<http://bit.ly/francoangeli-oa>). FrancoAngeli Open Access è la piattaforma per pubblicare articoli e monografie, rispettando gli standard etici e qualitativi e la messa a disposizione dei contenuti ad accesso aperto. Oltre a garantire il deposito nei maggiori archivi e repository internazionali OA, la sua integrazione con tutto il ricco catalogo di riviste e collane FrancoAngeli ne massimizza la visibilità e favorisce la facilità di ricerca per l'utente e la possibilità di impatto per l'autore.

Per saperne di più:

[http://www.francoangeli.it/come\\_pubblicare/pubblicare\\_19.asp](http://www.francoangeli.it/come_pubblicare/pubblicare_19.asp)

This volume is published in open access, i.e. the entire work file can be freely downloaded from the FrancoAngeli Open Access platform (<http://bit.ly/francoangeli-oa>).

FrancoAngeli Open Access is the platform for publishing articles and monographs, respecting ethical and qualitative standards and the provision of open access content. In addition to guarantee its storage in the major international OA archives and repositories and its integration with the entire catalog of F.A. magazines and series maximizes its visibility and promotes accessibility of search for the user and the possibility of impact for the author.

# Digital Transitions for the Use and Reuse of Digital Assets for Museum Collections

Elisabetta Caterina Giovannini

## Abstract

Nowadays, digital assets have become increasingly important for heritage institutions and individuals. Digital assets, such as images, videos, audio files, text, and 3D models, are used in various contexts, including cultural heritage, for diverse purposes. Museums offered free access to their collections during the COVID emergency, enlightening the necessity of using and reusing these assets efficiently and effectively. In the museum sector, diverse content must be created for different target audiences using various narrative styles and digital storytelling.

The paper addresses the diverse use of the same digital asset consisting of a small wooden *maquettes* collection. The heterogeneous historical data and information collected about maquettes generates a comprehensive digital asset allowing the creation of many outcomes for both researchers and the large public, including maps, virtual reality experiences, and information systems to access documentary and archival heritage.

The digitization process of all contents involves different approaches to encoding metadata about the steps and methods of digitization – *provenance* and *processes* – for both digital representations of 1D, 2D, 3D resources and virtual environments.

The paper shows the different methodological approaches used for disseminating digitalized content collected during a funded project and the definition of various outcomes according to the diverse targeted audience.

## Digital Assets and their reuse

In 2016, the *FAIR Guiding Principles for scientific data management and stewardship* [1] were published in Scientific Data. The principles emphasize machine-readable practice in data management systems as their capacity to find, access, interoperate, and reuse data with no or minimal human intervention. The authors intended to provide guidelines to improve the Findability, Accessibility, Interoperability, and Reuse of digital assets.

Despite the general belief that data regards the scientific sector, it is possible to assume that data are primary resources also within the Cultural Heritage domain.

Digital Cultural Heritage assets are used mainly in various contexts and with previously unimaginable file formats. In education, they can create interactive and engaging learning experiences. In entertainment, they can be used to make films, 3D animations, and video games. Images, videos, and audio files are also used to create engagement and compelling content for dissemination in cultural heritage projects.

Reusing digital assets has become an essential aspect of digital asset management: the ability to reuse digital assets enhances the productivity and creativity of cultural institutions by allowing them to save time and resources. Depending on the data acquired, there is *a priori* concern about the type of output to be obtained in cultural heritage digitization projects. Depending on the dissemination or scientific purpose, an attempt is to identify the most suitable platform or tool.

This happens not only for 3D models but also for all the iconographic and documentary material that usually characterizes research in cultural heritage.. Documentary and archival resources follow the rules peculiar to the disciplinary field to which they pertain but pose different considerations in the field of architectural drawings and digital representations. This study presents a methodological workflow for creating a digital asset composed of 3D models and archival and historical resources. [Giovannini et al. 2019; Mafri, Giovanni 2020]. The digital asset (fig. 1) also contains many drawings and architectural representations of diverse types: sketches, survey drawings, and layout tables called *planches*, for the printed edition of the Jean-Jacques Rifaud oeuvre "*Voyage en Égypte, en Nubie, et lieux circonvoisins*" [2].

Fig. 1. Methodological workflow for the definition of the digital asset developed during the project [2], to create diverse digital cultural content using various platforms for 3D models, SketchFab [3], 3DHop [4] by ISTI-CNR, ATON [5] by ISPC-CNR. The VR was created using both Unreal Engine and Spoke by Mozilla Hubs [6]. The 1D and 2D assets were stored in a Microsoft Access DB for remote access and online using ResearchSpace Knowledge System Platform [7]. Image by the author.

Rifaud documented his trip in Egypt on his never finished oeuvre, which should have been composed of 300 *planches*. Some *planches* are relevant to the research as they represented the temples depicted by maquettes conserved at Egyptian Museum in Turin, a project's partner.

## 2D digital assets: digitization and metadata encoding with a semantic approach

Digitization of cultural heritage refers to converting physical artifacts, documents, and other cultural materials into digital formats that can be stored, preserved, and shared electronically. This process allows for greater access to cultural heritage materials and makes preservation efforts more efficient. In addition, digitization can facilitate research, education, and interpretation and provide new opportunities for public engagement with cultural heritage.

Digital Asset Management (D.A.M.) organizes, stores, and retrieves digital assets. The system can help organizations and individuals to effectively use and reuse digital assets by providing tools for managing, searching, and retrieving assets. The role of D.A.M. in libraries and archives, together with the Collection Management Systems (C.M.S.) in museums, is a well-established practice. The ICT sector offers, for long time, a series of services and suitable solutions to manage diverse type of data, also using recognized standards for both digital libraries and archives. The same happens in the museum sector; where, for example, European [8] initiatives offer a panorama of structured and standardized digitization workflows. Europeana and other recently funded European projects nowadays have conservation or restoration purposes and dissemination objectives.

Following this purpose, the project – to which the digital assets belong – used a digital environment developed by the museum community for research: the ResearchSpace [9] knowledge graph system can store and analyze diverse digitalized content. The resources were organized and collected using as primary reference the temple depicted by each source: drawings, survey drawings, *planches*, and *maquettes*. The content was analyzed using image annotations adding semantic layers related to architectural elements, their diverse visualization types and architectural representations [Giovannini 2021].

The resources used were partially digitalized by the professionals of the *Manuscripts et Archives* area of the *Bibliothèque de Genève* (BGE): original drawings by Rifaud. Other iconographical material, *planches*, were digitalized from the more recent scientific publication about the oeuvre of Rifaud [Bruwier et al. 2014; Claes 2014].

All material acquired with the highest resolution was resampled and exported in a different file format (.jpg). Image files have been decreased in quality between 25 % and 50% to be accessible through the web (fig. 2).

Creating an organized digital asset in ResearchSpace, allowed to link textual descriptions with original drawings and *planches* they describe. The manuscripts conserved at the BGE offered a detailed description of the drawings. Then, the 1D textual dimension was connected to a 2D asset composed of drawings and *planches*, and finally, with the 3D content: the digital photogrammetric model of the museum collection (fig. 3).

The 2D digital asset was also used to develop a prototype for a 3D web-based puzzle made in collaboration with ISPC-CNR [Lo Turco et al. 2019].

The proposed solution pertains to the context of gamification and edutainment in the cultural heritage sector. At the end of the game, it is possible to access the 3D model of the temple of Tafa Sud resulting from the digital photogrammetric acquisition and hosted by an online repository in GitHub (fig. 4).

## 3D digital assets: digitization and visualization tools

The project's interdisciplinary nature implied a split between the metric acquisition of the *maquettes*, performed by a geomatic team [Spreafico et al. 2020], and the preparation of the resulting 'raw' data for use through open and web-based systems.

Fig. 2. The image collects information about primary resource and secondary resources obtained by reducing quality of images to be hosted by ResearchSpace (RS) and uMAP. A table with pictures of drawings from BGE, acquired at 600dpi with a i2S SupraScan II and plances from Claes (2014) acquired at 600dpi. Image by the author.

The *maquettes* have the peculiarity of being divided into two parts. It is possible to open them and discover their internal sections. To complete some 3D scenes was necessary to add a second model that generally represents the monumental entrance path to the temple: Portals or Propyleia [Giovannini, Tomalini 2020]. The post-processing phase involved MeshLab [10] to organize the 3D models in diverse scenes to be displayed using 3DHop. 3DHop is designed as a scientific tool capable of precisely visualizing high-resolution textured models. Before being uploaded to the repository, the models were retopologized using the Quadric Edge Collapse Decimation (with texture) filter [Garland, Heckbert 1998]. A GitHub repository [11] hosts the digital asset for 3D models. The prototype phase concerned the development of a series of .html web pages for each maquette. The basic .html code was implemented by configuring a user interface that allows, for example, to turn off and on the parts of which the model is composed, making the visualization more complete [Potenziani et al. 2015; Potenziani et al. 2018]. However, Web-design requires considerable effort and advanced knowledge of CSS code. Therefore, the SketchFab platform for online visualization of 3D content was chosen for larger-scale dissemination. The platform, unlike 3DHop, is partially free. Another substantial difference between the two solutions is the inability of SketchFab to display parts individually, turning them on and off. An external solution has recently been developed to separate visualization of the components that make up the scene [12]. The possibility that SketchFab offers to embed content into any html application is a powerful solution; however, it is limited in its ability to display models no larger than 200MB, including textures files. The use and reuse of the 3D asset needed the 3D to be edited at various times according to the platform's requirements to host them (fig. 5).

Fig. 5. Diverse user interfaces of the digital galleries developed using diverse 3D assets. The content can be also accessed by using QR codes to reach different online URL addresses. Image by the author.

## Mapping narratives using uMAP

The project's dissemination content included using maps as a narrative vehicle. This approach fits within research topics such as 'story maps,' 'fictional cartography,' 'narrative atlas,' and 'geospatial storytelling,' which characterize the growing interest in the relationship between maps and narratives [Caquard 2011].

The map has storytelling purposes. The narrative style aims to create an approach to interpret and map the travel diaries of J.J. Rifaud: the proposed content presents texts from his travel diary, the maquettes probably made by local craftsmen, original sketches, survey drawings, and the published planches.

Among the information classified during the project, care was taken to investigate the geolocalization of temples that were retrieved from online archeological repositories.

The data obtained were then used to create an interactive map showing the temple location by associating it with the previously developed 1D, 2D, and 3D materials. The map was first prototyped using Thinglink and then developed using uMAP [13]. Thinglink is a platform for creating interactive media using images, videos, virtual tours, 3D models, and simulations. uMAP provides an open-source and easy-to-use graphical interface for customizing maps and geolocating datasets specially created or retrieved from Open Data repositories. uMAP enables the creation of maps that use OpenStreetMap layers as background [Shahamati et al. 2022]. In the prototype phase, a map drawn by J.J. Rifaud was used as background for the interactive map (fig. 6).

In both maps, places are indicated with customizable markers. In uMAP, the place information within a descriptive field can be implemented by adding any content embedded with a specific URL reference. The resource, image, video, or 3D model must be hosted by an online repository to be retrievable (fig. 7).

Fig. 6. Prototype of the map, developed by Ph.D., Noemi Mafri, with hotspots in the Temples positions. The hotspots allow access to the 3D model hosted by the GitHub repository.

## Digital storytelling using Virtual Reality

The use of virtual reality in recent years has witnessed a growth of interest on the part of museum institutions. One approach to creating virtual museums that are copies of real ones consists of using 360° acquisition technology to capture the museum environment. The virtual tours can be implemented in the scene with additional information layers. This solution was chosen by diverse museums that want to make their collections accessible. Museums that developed this type of virtual tour are The Metropolitan Museum of Art [14], Guggenheim Museum [15], Louvre Museum [16], The Uffizi Gallery [17] and many others around the world. A more complex type of product is the virtual museum, which involves a digital environment to be designed and modeled (container) and content: the museum collection to be organized within the built space. Another choice in creating a container 3D modeling is to replicate an existing space: an example is the Modigliani VR [18]. An additional narrative suggestion that goes in this direction came from analyzing archival sources at the museum: a drawing representing a floor plan, undated but showing an inventoried exhibition layout:

Fig. 7. The uMAP developed for the Expedition Models of Egyptian Architecture - EMEA Collection - Temple of Debod.

Fig. 8. Archival and historical documentation used to create the Virtual Reality (VR) scene.

Fig. 9. Comparison between Photographic documentation conserved at the Museo Egizio (top) 3D model (bottom-left) and Unreal Engine user interface developed by Enrico Picchio (bottom-right). Image by the author.

a list of inventory numbers that mention the *maquettes* follows the sketch. Both documents were analyzed to recreate the exhibition layout using virtual environments. The information was then interpolated with historical photos representing the layout exhibition but in a different hall (figs. 8, 9).

The Unreal Engine was chosen as the fruition system: the software is written in C++ and features a high degree of portability, supporting a wide range of desktop, mobile, console, and virtual reality platforms. The software interface requires hard programming skills.

The 3D model of the virtual environment portrays Hall I on the museum's ground floor; today renamed *The Sekhmet Hall*. The scene repropose the 3D digital asset developed for the digital gallery of *maquettes* integrating them in the virtual space.

A diverse and parallel approach was to move to a more flexible and easier-to-use platform. The digital asset developed for recreating the Unreal Engine application was uploaded and reused within the SketchFab platform and Hubs by Mozilla. Hubs is a platform for creating an immersive social virtual environment (SVE) online [Hagler et al. 2022; Li et al. 2021]. It is a tool for communicating and collaborating online and allows you to connect with people and use resources available on the Internet for creating digital environments. Spoke allows to use 2D and 3D content from across the web, using data from platforms like Sketchfab and composes a virtual collection into a custom scene. 3D objects from the SketchFab gallery of the British Museum were used to replace the Sekhmet statues (figs. 10, 11).

## Conclusions

The paper addresses the multiple uses of digital assets, digitalized, transformed, and reused for different dissemination purposes. The diverse storytelling approach addresses various technologies and tools related to the additional narrative opportunities the case study offers.

The workflow pipeline shows how it is possible to start with a unique collected and digitized digital asset generating multiple visualization and fruition solutions.

Transforming data means generating new and diverse digital assets affecting resolution and

metadata storage data quality. The tools and software cover various technologies researchers and non-specialist users use. Different solutions require different file formats. The workflow proposed can be useful for cultural institutions, museums, and the heritage sector; defining a practical and comprehensive digital curation approach to their collections.

Fig. 10. The 3D environment developed for the Unreal Engine application and reused for the Spoke by Mozilla Hubs application. Post-processing phases. The scene was separated by 3D models (3DsMax), then was textured (Rhino). Finally, the scene was uploaded in Sketchfab to be enriched by models using Spoke. Image by the author.

Fig. 11. Mozilla Hubs environment using the 3D assets uploaded on SketchFab. User interface of Spoke by Mozilla to enrich the scene. Image by the author.

## Notes

[1] <<https://www.go-fair.org/fair-principles/>>

[2] The digital asset was developed during the 'B.A.C.K. TO T.H.E. F.U.T.U.R.E. - BIM Acquisition as Cultural Key TO Transfer Heritage of ancient Egypt For many Uses To many Users Replayed' funded project. It was an international and interdisciplinary collaboration with the Fondazione Museo delle Antichità Egizie in Turin. Scientific coordinator: Professor Massimiliano Lo Turco, Department of Architecture and Design DAD, Politecnico di Torino.
