Oberon, Turin's Quicksand And Other Stories: Sneers and Diversions of the Young Mollino and his Circle

Michela Rosso

Across an unprecedented reading of Mollino's "Vita di Oberon" (1933) and "Architettura di Torino. Le sabbie mobili" (1934), I propose to look into irony, parody and caricature as underexplored dimensions of the Torinese architect. Mollino's early writings are viewed through the prism of his paternal legacy and singular web of collaborations, and against the backdrop of the contemporary architectural polemics, the source material for the architect's biting sense of humour. An interlude separates the dissection of the two writings: the drawings for the Saint-Gobain residential estate competition (1952), with their irreverent depictions of everyday life, are seen as a powerful tool in Mollino's hands for questioning the rigid authoritarianism of modernist formulae. The reiterated image of the architect-artist, all "genius and unruliness", is partly reassessed: Mollino's distinctive ironic gaze is inseparable from Oberon's "practical living poetry", a unique blend of lyricism, self-awareness, and the precise understanding of the cultural climate of his life and work.

PALABRAS CLAVE

Humor arquitectónico, Caricaturas arquitectónicas, Racionalismo, Calo Mollino, Oberon

"MOLLINO. Diabolical character. When he speaks, *Gillette* blades, razors, scimitars, pieces of glass, enchanted gardens, and monstrous flowers of colours never seen, come out of his mouth."¹

In "Vita di Oberon" [life of Oberon], —Carlo Mollino's published literary debut appeared in *Casabella*, between July and November 1933²— fiction and reality merge in the parable of Ettore Lavazza, aka Oberon, the young architect's alter ego. The writing is certainly not new

Michela Rosso

Full professor in the History of Architecture at the Turin Polytechnic, architect (1994) and Ph.D in the History of Architecture and Urbanism (1998). She has lectured extensively in Italy and abroad, and held guest professorships and visiting scholarships at Getty Research Institute Los Angeles (1999); CCA, Montreal (2023); Yale Center for the British Art, New Haven (2016), the Bartlett, UCL; GSAPP, Columbia University (2008, 2013), Universitat Politècnica de Catalunya (2012); South East University School of Architecture, Nanjing (2018), and Kyoto Institute of Technology (2018). Her research focus is on XXth-century architectural history, historiography, criticism, and journalism. On these themes she has published on the works of historians, critics and writers such as John Summerson, Nikolaus Pevsner, John Betjeman, J.M Richards, Philip Morton Shand, Osbert Lancaster, Lewis Mumford, Kenneth Frampton, and Joseph Rykwert. Twentieth-century architecture is her other line of research with works on Auguste Perret, Ernesto N. Rogers, Mario Labò, the engineers and architects of the Gardella family, Roberto Gabetti, Carlo Mollino, and Andrea Bruno. Her articles have appeared in *History of Art Historiography*; *The Journal of Architecture*; *Zodiac*; *Architectural Histories*; *Rassegna di Architettura e di Urbanistica*; *Studi e Ricerche di storia dell'architettura*; *Domus*; *Annali di Architettura*. Among her most recent interests, the study of architecture, irony and satire is at the centre of her *Laughing at Architecture: architectural histories of humour, satire and wit* (London – New York, 2019) as well as of "Histories of Architecture, Irony and Humour, 1750-present", the panel that, with Katerina Zacharopoulou, she put up and moderated at the last EAHN Conference in Athens (2024).

to architectural scholarship, yet it deserves further reading. Oscillating between phantasmagory, the disenchanted chronicle of the present, and a fair amount of self-humour, it illuminates the main character primarily, and then the annoying troublemakers that hinder his work. Puzzling and pessimistic, Mollino's autobiographical half-fantasy takes jabs at current conventions of architectural practice and depicts an ironic image of his professional self, occasionally revealing an unabashed sense of superiority. The wild, uncultivated Oberon, for whom the projections of Monge were a late and painful conquest, is constantly forced by contingencies to turn necessities into virtues, a chameleonic figure, a jack-of-all-trades, at once "a mechanic, an accountant, a lawyer [...] a master of good manners, a toad swallower and *charmeur*, a dancer with an old lady, a snake charmer..."³.

Under the guise of the mythical king of the fairies, the powerful and mischievous figure known for his magical abilities, the young Mollino uncovers frictions and sufferings implicit in the architect's daily routine work. The result is disastrous, comic and irreverent.

The Australian Wall, "the first civil work of Oberon" — a fairground booth — is the novel's architectural core, at once enigmatic and paradoxical: "the terrifying vertical track, where, suspended in midair, horizontally clinging to a motorcycle speeding at great velocity, Ciro Beck surrenders to the most breathtaking stunts under the eager, disaster-hungry eyes of the crowd packed tightly above, at the edge of the fearsome, echoing well"⁴.

The enigma is untangled: five years earlier the wall is the subject of a painting of the kaleidoscopic Italo Cremona (Cozzo 1905–Turin 1979), the artist versed in numerous disciplines⁵. In his variant it is entitled "Il muro della morte" [the wall of death]. In the same 1928, Cremona has signed "Chauffeur", an oil of Mollino wearing a helmet, glasses, and pilot gloves. Mollino and Cremona are both born in 1905; they also happen to share roots in the lombard-pavese region: Italo in Cozzo Lomellina, Carlo's progenitors in Voghera. Amongst other things, they are linked by close friendship, a liking for motorcycles, and an extraordinary propensity to risk. Often, they go to admire the young Radames, who, on the "old Indian"⁶, speeds vertically up the Australian wall in a booth on the outskirts of Turin. Cremona captures the exhilarating moment: "The motorcycle plunged into the crowd's chest, then leapt away to slam under the fingernails tightly gripping the edge of the wall. Ton... Ton... Ton... You wanted to have fun... look, look..."⁷ (fig. 1).

BEFORE AND AROUND OBERON: FOREBEARS AND AFFINITIES

Carlo Mollino graduates from the School of Architecture of the Regio Politecnico in July 1931. His thesis is a modern commercial building in the very heart of Turin's roman quadrangle: "clear as a well-structured equation, with the air of not seeking to invent a new architecture but rather to follow and refine the path already charted and actively evolving across the world, with a keen and watchful eye" — Giuseppe Pagano would later comment⁸. 1931 is a fateful time for Italian architecture: ongoing controversies often take on explicitly satirical tones. Discussion around the role that architects should play in a fascist state becomes crucial at the beginning of the year. Igniting the debate is the article "Architettura arte di Stato" published by the gallerist and critic Pier Maria Bardi (La Spezia 1900- Sao Paulo 1999) on 31 January

02

in *L'Ambrosiano*. The issue, later at the heart of Bardi's *Rapporto sull'architettura*, is extensively discussed between February and June in all the major newspapers. On 30 March, in the premises of the Galleria di Roma, Bardi inaugurates the Second Exhibition of Rational Architecture. At the centre of the polemics is the outrageous "Tavola degli Orrori" [*Table of Horrors*], a photomontage that sarcastically depicts the "old Italy" by juxtaposing excerpts from novels, newspapers and postcards — the worst examples of the pre-fascist fogginess — with architectural works of Piacentini, Brasini, Bazzani, and Giovannoni. In Turin, the reconstruction of the first six blocks of via Roma is well underway...

A curious testimony of this very excited climate is the booklet *Veglia degli architetti* " [Soirée of architects] with which on 8 April 1931 the small group of graduands intends to celebrate the beginning of their professional adventure. Introduced by victory hymns to the new "artistic squadrist", the short gallery of portraits playfully characterized by a youthful spirit of dissent, is alternated with photos where Giuseppe Pagano and Gino Levi Montalcini's Palazzo per Uffici (1928-30) and Padiglione Italiano at Liège Exhibition (1930) are arranged in natural continuity with Giuseppe Capponi's interiors, Pierre Legrain's iron and crystal piano-forte, and the Stockholm exhibition stands. While Ippolito Battaglia signs an amusing *vademecum* for architectural beginners in ten arguments, the sculptor Michele Guerrisi sketches a series of thirteen caricatures of the Torinese crowd. Within this witty collective self-portrait, Carlo Mollino appears as follows: "He claims to have been born in Turin, but it is whispered that he is Saracen to the core [...]. He would feel at ease both at the court of King George of England and in a seedy tavern in the slums of

Calcutta—a trait of a man both sound and self-assured, and an invaluable quality for an architect⁹.

"Oberon, rich in his father's businesses [...] could have continued in the untouchable splendor of the crown prince"¹⁰. Since the early 1930s, Mollino is carrying out architectural practice on the path steadily laid out by his father, the prolific civil engineer Eugenio¹¹. In "Vita di Oberon", the tormented association emerges clearly, a relationship of contrasted admiration, lived both in continuity and in antithesis (fig. 2). It is from Eugenio, alongside other things, that Carlo inherits his liking for acrobatic skiing performances, the blend of athleticism and artistry for which he is also renown. A certain familiarity with caricatures and acrobatics, surfaces in Eugenio's archive¹²: here a sequence of three cartoons show Carlo's father boldly, funnily, and disastrously descending the *Colle di Sestriere*. On the background stands the iconic volume of the Albergo Torre (1931-33), designed and built by engineer Vittorio Bonadè Bottino at the request of senator Agnelli¹³ (fig. 3) (fig. 4).

Involved with the second-generation futurists, Mollino is also part of the countercultural circles gathered around Mino Maccari (Siena 1898- Rome 1989), painter, illustrator, satirical cartoonist and writer. Cremona, who has known Maccari since 1931, has acted as intermediary between the Torinese architect and the Senese painter¹⁴. The "communication between two spirits"¹⁵, strengthened by a dense and prolonged epistolary correspondence, leads to Mollino's surrealist novel *L'Amante del Duca* [the duke's mistress], published in four instalments in *Il Selvaggio*, the journal that Maccari directs alongside Leo Longanesi, since 1926 and until 1943. The unmistakable voice of Strapaese, *Il Selvaggio* expresses a satire that strikes from within. Maccari and his clique suffer Fascism in an ambiguous yet dramatic way: by accepting to remain on the margins of the game, they manage to preserve their own enclave of freedom¹⁶. Cremona, on the other hand, is likely the catalyst for Mollino's awareness of the new experiences emerging from Paris, particularly magazines *Minotaure* and *Verve*—which he, Cremona, and the art critic and painter Albino Galvano eagerly read and discuss in the early 1930s. Finally, to briefly recompose the circle of the architect's close-knit network of acquaintances, it is precisely the surrealist culture, especially that of Breton and Dalí, that leads him to an unorthodox reappraisal of Art Nouveau—one of Cremona's longtime obsessions too¹⁷— leading him back to his father's early professional work¹⁸.

OBERON, CIRO, AND THE OTHERS

Oberon, who died prematurely in a luxury sanatorium in Davos, "lives on in us and in the directions of our architecture"¹⁹. *Nemo propheta in patria*, he is settled in the other hemisphere. It is here, under the tropical sky, in the golden days of the circus, that *Ciro* and Oberon meet. The acrobat has just returned home: his business has fallen into ruin; precisely at this moment Oberon *understands and sees architecture*²⁰. Together, they invent the marvel—the wall of danger—a flash of genius and a hope for fame. Under *Ciro's* tear-filled eyes, the architect draws a first sketch, a masterpiece of modern acrobatics²¹.

Ciro, the novel's deuteragonist, is the fearless motorcyclist who caused heart palpitations among the vast audience that followed him in his mortal trap stunts. In Oberon's eyes, he is the perfect architect's

04

Fig. 04

“Eugenio departs from Sises; (2) Eugenio makes a stop at Alpette; (3) and... arrives unscathed in Sestriere”. Sketches by Eugenio Bonicelli. Pencil on tracing paper [late 1920s]”. Credits: AEM F19.

client, rich in intelligence and sensitivity, someone whom you would never be forced “to call a ‘filthy Philistine’”²². A vast abyss separates Ciro from the multitude of Oberon’s ordinary, capricious clients who continue unperturbed to make obscene requests: “‘make it all modern, no capitals’²³.” It doesn’t go any better on the front of public commissions where “the idiotic municipalities” approve and demand the same architecture that has always been made, the kind that “harmonizes”²⁴. The allusion to the current jargon of competitions’ briefs, such as the notorious text of the royal decree emanated three years earlier for the reconstruction of the first six blocks of Turin’s via Roma, is visible in watermark. Later on in the text, Mollino would insist on this point by introducing the invention of “a gasoline-powered quadriga”²⁵, a hybrid creature —half chariot and half car —a parody of the stylistic compromise characterizing the architectural practice of the time.

The picture of the client type, master of deceptive rhetoric who poses as an expert in good taste, for whom modern architecture is no more than an elusive will-o’-the-wisp, results into an enjoyable character portrait. That’s the case of the logorrheic fellow who wants a villa at the Lido of Venice:

“He talked about everything and didn’t want me to interrupt: Venice, Sem Benelli, Aucassin and Nicolette, Lionello Venturi, Montecatini, Avignon and the Côte d’Azur, rationalists, Giuliano da Sangallo, the crisis. ‘Those were the good times of the Renaissance; I should have been born then’ [...]. I threw him out the door. He didn’t get hurt, but it was a mistake: [...] meanwhile, rumors started circulating that I was unbalanced. It was an unnecessary luxury: he went to have his house made by architect ***”²⁶.

Yet, the state of the current profession is no less discouraging: the targets of Mollino’s barbs are “those architects who think laboriously with the decimeter”, those who “in front of the built work, witness the painful novelty of their architecture”. He concludes: “In reality, the proportions have torn apart [...] There is no perfect common scale, there is one for each building”²⁷.

THE CONCRETE EXPERIMENT, ALWAYS NEW AND UNKNOWN”: ARCHITECTURE WITH FIGURES

Years later, Mollino’s empirical posture, already crystalline in Oberon’s words, resurfaces in “La verità non è una sola” [the truth is not one-sided], the motto for the unfortunate competition entry of the Saint-Gobain housing project in Pisa (1952)²⁸. The aim is to correct the presumptions of rationalist

05

enlightenment, to mitigate the abstract *dirigisme* of modern architecture that is believed to be destined to failure²⁹. The graphic style of the perspective views immediately captures our attention: Saint-Gobain's yards and balconies are enlivened with a variety of characters, everyday objects, and tools. Mollino's manifold passions are encapsulated in one particular scene: a young girl posing on the seat of what looks a BMW R50, is about to be shot by her boyfriend/photographer³⁰ (fig 5). In other spots, geese and hens roam freely around; a dog peeks out; sheets and underwear flutter on the racks; a van loaded with gas cylinders is parked nearby; a young couple lazily lean against the railing of the top-floor balcony. And there is more: the sign "Vietato stendere biancheria, parcheggiare, allevare animali" [laundry drying, parking, breeding animals prohibited] is promptly disregarded: scooters, bicycles, and a wheelbarrow take over the communal spaces. Humans and non-humans —and their actions, populate the site, conjuring up a disordered, yet jolly environment. Chaos, the act of breaking rules, and graffiti on walls³¹ —are the accepted codes of daily civil co-existence: Oberon's poetic manifesto, "Architecture is not a beautiful corpse with correct proportions, but a work that sings its reasons for life"³² has become a living reality (fig 6).

**"THE RASCALS OF
TURIN" AND "THE TRIBE
OF THE MOTIONLESS":
MOLLINO'S
CARICATURES IN
WORDS**

"At the opening of the Galleria San Federico on Via Roma, one fine morning in June 1933, a long procession of students, preceded by a group of people in masks with episcopal drapes, mitres, censers, walked back and forth as part of the inaugural ceremony, featuring caricatures and a *Te Deum* hymn suitable for the occasion"³³.

Although there are no records to prove it, Mollino's presence in the *goliardata* evoked by Vittorio Bonadé Bottino, would certainly not be surprising. Always exact in capturing the aura of situations, the not yet thirty Mollino acutely registers the mood of his times: in June 1934, in the column "Picche" [spades] of the weekly *L'Italia Letteraria*, writing under the pseudonym of Oberon, he mocks the amateurishness of the ongoing parliamentary discussion over the competition for the Palazzo del Littorio in Rome, the hot topic of the day³⁴.

But it is in "Architettura di Torino. Le sabbie mobili"³⁵ that the literary verve of Mollino, accompanied with some powerful

Fig. 05

06

caricatures of his city and its inhabitants, appears in all its radiance. On 10 November 1934, through the fulminating synthesis of a Turin immobilized in quicksand —a city full of enticing promises, yet deceptive— Mollino sums up the condition of architecture at the foot of the Alps: the more one struggles, the deeper they sink. The writing is in many respects a sequel to “Vita di Oberon”. Ettore Lavazza reappears in these lines to give voice to the author’s corrosive humour. His bold defiance is a punch in the face to the bourgeois respectability of Turin, a tediously immobile city, frozen as a statue of salt. Mollino’s mordant passages convey a vivid picture of Turin, and its curious people —sorts of rare beasts. “Emulsified Celts, stone heads”³⁶, “the tribe of ‘the motionless’”³⁷, Turin’s citizens lack warm blood in their veins. A seemingly inescapable destiny has shaped both contemporary architecture and the city’s unwritten rules of behaviour. The image is echoed, not surprisingly, in Maccari’s earlier words. A phlegmatic city, so it must have appeared Turin to the founders of *// Selvaggio*, when they decided to settle under the Mole by moving the editorial board to the mezzanine of 12, Via Pietro Micca: “When we got off at

Fig. 06

Porta Nuova, a traffic officer warned us to walk on tiptoe so as not to wake the usual sleepers. It was three in the afternoon, and we found this rather strange. ‘How many people in Turin are asleep?’ [...] ‘The calculation is complicated,’ the officer declared. ‘One would have to start by counting those who are not asleep. The trouble is, in Turin, everyone is asleep’³⁸.

“Architettura di Torino” opens up with a quote from Piacentini in which the Roman architect recognizes the audacity of the Turinese section of MIAR [Movimento Italiano per l’Architettura Razionale], the “boldest and most unprejudiced group”³⁹, “the rascals of Turin,” as Mollino soon re-christens the five architects Pagano, Levi Montalcini, Sottsass, Cuzzi, and Aloisio, will turn to be the no more than the fleeting passage of a meteor in the bleak sky of a city trapped in quicksand: “Turin is not fertile Land for such cultures”⁴⁰. The city’s enduring and unwavering tradition of discipline and order triumphs over the proposals of the five young rationalist architect. Thus, for the first section of Via Roma, Turin unfolds imperturbable and obstinate, Baroque — or a Piedmontese pseudo-version of it — “the much-cherished *barocchetto*”⁴¹. While Mollino’s stance is substantially tuned with MIAR’s polemical counterproject published in *La Casa Bella*⁴², at the same time, he collaborates, at least to some extent, with Eugenio’s design of the (non-built) frankly neo-baroque façades of the block of San Pietro⁴³. The episode epitomizes the legacy of a highly respected and never-denied family tradition, from which, however, emancipation is urgently needed.

A brief look at history makes everything clearer: in Mollino’s trenchant imagery, Turin’s architecture has always been prose. The local court architects couldn’t offer her other than prose, orderly and dignified, yet still prose. The only “true architecture” came to Turin from artists of other regions, or even foreigners, and always as an act of authority. Then, “with just a whistle from the Duke, Juvarra arrives from some corner of Europe, riding a dragon, laden with fireworks, ribbons, braids, and mortars, expanding our city with his famous Baroque. Hats off—Turin becomes monumental”⁴⁴.

Again, an almost perfect coincidence with Maccari’s satirical pen cannot go unnoticed: at the beginning of 1931, the Senese writer has published his *filastrocca* on the reconstruction of via Roma. In the accompanying image, Marcello Piacentini, the coordinator of the whole operation, is dressed in 18th-century attire and rides a bat-winged devil⁴⁵. The fallen angel, Satan —symbol of temptation and rebellion— in Mollino’s version turns into a dragon, a sort of common obsession within this small coterie of confidants⁴⁶. Apart from these shared imageries, the association between Piacentini and the architect-scenographer native of Messina, both appointed by their absolute governors to bring new air in the city, is well founded: both were equally authoritative figures, both had received the prestigious award of *accademici* (“d’Italia” Piacentini, of the Accademia di San Luca, Juvarra), and most importantly for Maccari and Mollino, both were foreigners in Turin, urged by an act of authority to settle a problem that indigenous professionals seemed unable even to deal with.

Defined by Tafuri “the *enfant terrible* of modern architecture”⁴⁷, Mollino has often been portrayed as the eccentric, isolated architect, the capricious poet. His early writings, even the visionary “Vita di Oberon”, convey instead the picture of someone who is firmly rooted in the realities of his era: the local environment and its social

customs, are the objectivity to which Mollino —Ettore Lavazza— Oberon, anchors his every thought, even the seemingly hallucinatory ones. Through the gaze of a pitiless chronicler, the young Carlo fiercely analyzes what he sees: in a few sharp punchlines he unmasks the hypocritical conformism of his homeland and its queer people. His “practical ‘living poetry’”⁴⁸, always resistant to theoretical speculation, turns out to be the necessary material of his “razor blades”, as well as the guarantee of their ultimate success. This special kind of sardonic effervescence, in many ways close to those of his fellow companions, Mino Maccari and Italo Cremona, is comprehensible only within his extraordinary self-awareness—both of his professional role and his social position, his rigorous adherence to operational contexts and the necessary dialogue with the surrounding milieu. RA

Notes

* I thank Agenzia del Demanio, Carlo Mollino Archive (ACM) at the Politecnico di Torino, and Sezione Archivi Biblioteca "Roberto Gabetti" for granting permission to publish fig.1: Acrobatic performances in Piazza Vittorio Veneto, Turin [early 1930s]. ACM 3.4.13, 3.4.13.17; fig.2: Eugenio and Carlo Mollino [1940s]. ACM 7.6.11; fig.5: Competition for St. Gobain housing estate, Pisa. 1951-52. Overall perspective view, pen on tracing paper; ACM P:13D.246.6; fig.6: Competition for the St. Gobain housing estate, Pisa. 1951-52. Detail perspective view, pencil on tracing paper. ACM P:13D.246.19. (Publication Authorization No. 9481 of 2021). I owe a debt of gratitude to the personnel of Politecnico di Torino, Architecture Archives and Library and in particular to Enrica Bodrato, Head of Historic Heritage Management Office, and Rossella Fiorentino, Head of the Architecture Library Hub, for their generous and continuous support, as well as to Napoleone Ferrari (Museo Casa Mollino, Turin).

This work benefitted from conversations and exchanges with colleagues Mario Lupano, Roberto Dulio, and Enrico Moncalvo, and with former students Giacomo L. Beccaria, Fabio L. Marino, and Lorenzo M. Concordia.
