CONTENTS

PROLOGUE

Preface by Albena Yaneva 8

Introduction 10

Acknowledgements 18

BIOS

City through bits, data, space and time 22

City as a program, Hacking a city and the Backdoor concept
Blackhole Dimension of a city
Guide to the reading book
Interfaces throughout the book
Mappings and diagrams

HACKING ISTANBUL

Pre-fragment: how agricultural policies fueled migration and industry 42

World War II and Marshall support
Between industry and urbanism
From field to factory
Internal mass migrations in Turkey
The capitol or the capital
Becoming Istanbul: the rise of a metropolis

Fragmentation: spatial practices and the politics 80

The concept of hometown bonds and flows to Istanbul
City of migrants and industry
Figure: The new sociopolitical dynamics of the city - Gecekondu
Beyond a shelter: interplay of space, politics, and legalisation
Gecekondu chronicles: unveiling the unseen
Figure: Navigating the city's new veins - Dolmuş
From farmlands to radio: the arabesque revolution
Figure: A new urban craftsmanship - Yapsatçı
Overflowing horizons

Fragmented: upscaling through mass housing, capital, and politics 148
From informality to urban asset
Subsequent waves
Becoming urban or remaining rural
Interplay between formal and informal
Figure: Gated communities
Figure: Mass housing
On the way to globalization with neoliberal policies
Istanbul: The Fragmented City
Rising Istanbul: Urban gigantism

Fracture: living on the fault line between neglect and awareness 202
Ground zero: Turkey's ongoing battle with earthquakes
Beneath the surface: Istanbul's earthquake chronicles
Living with risk
Unraveling Istanbul's seismic profile
Beyond the quake: Fortifying Istanbul

BACKDOOR OF KARTAL

Revealing urban code through a scale shift from city to microcosm 226
Choosing Kartal as the backdoor
Designated as an industrial hub
Seismic implications in Kartal
Kartal today: Contemporary observations
Kartal: A microcosm of Istanbul
Hacking Istanbul through the Backdoor of Kartal

EPILOGUE

Sealing the script to enable subsequent iterations 278
Recursive closure

BOOTHSTRAPPING

The City as an Unprogrammable Program 286
Contingencies, informal actors, and the limits of urban coding

COMPONENTS

Bibliography 294

Alp Arda is an architect and joint PhD candidate at Politecnico di Torino and Tsinghua University, working across architecture, urban design, and urban planning. His research is rooted in Istanbul, approaching its urban transformation not only as a planning act but as a design condition produced by competing authorities and spatial inequality, which he traces under the concept of decision infrastructure. A junior fellow of the China Room, he was also a design assistant for Constructing La Biennale at the Venice Architecture Biennale 2025.

...to Atatürk, city of Istanbul and my beloved family
